Weather spreads grief and damage

Barns collapse

By JOYCE BUPP
Staff Correspondent

YORK -- Snow blew around the silos and funneled in on the top of the eight-year-old cement block and wooden truss staunchion barn extension at the Smyser's Richlawn dairy farm, East Berlin Road. Then, sometime late last Friday evening, the roof went down.

Trapped under the twisted metal and broken timbers were 35 Holstein cows and a calf. Miraculously, only one animal was killed, pinned under overhead silage feeding equipment. Several other cows were treated for cuts and bruises to udders and backs.

Richard Smyser, who operates the farm with his sons, Robert and Rodney, discovered the collapsed 20 by 40 foot extension when he made a late night check on the herd. Members of the Weiglestown Fire Company were called to assist in cutting through the pipes and debris to free the trapped cattle. With the peak of the roof lying directly down the middle of the center walkway, stall pipes surrounding the resting cows had held the structure just off the animals' backs. Cows were freed through the feeding areas along each side of the structure.

The original dairy facility

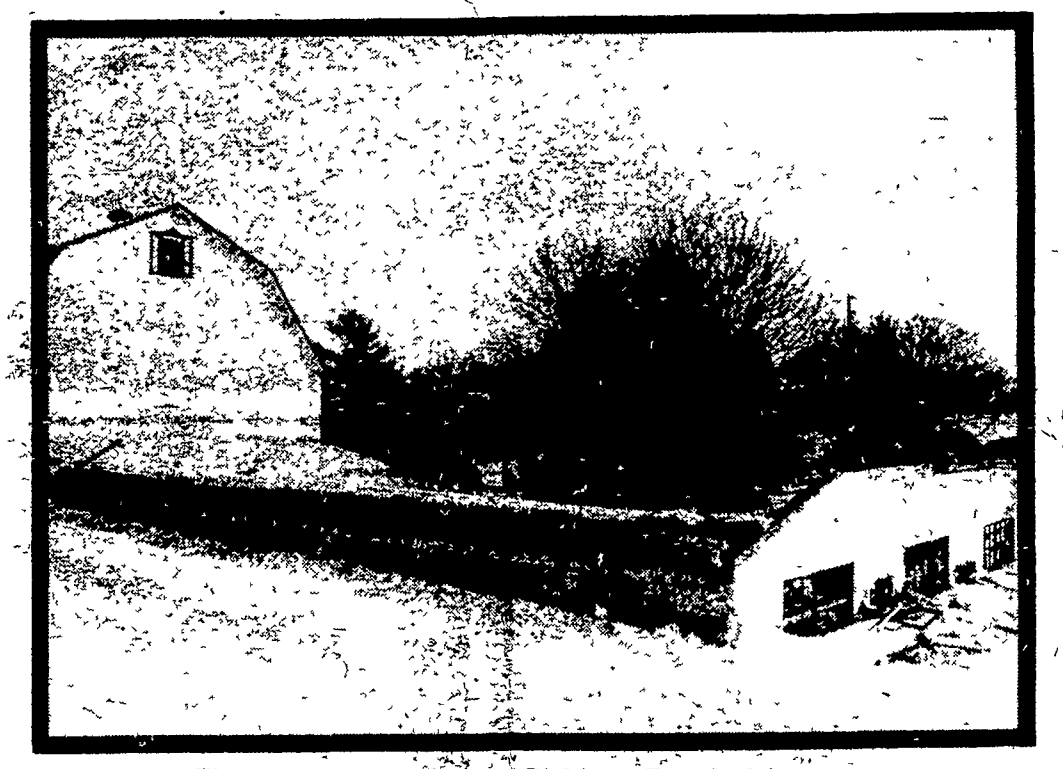
Crops suffer

By LAUREL SCHAEFFER
Berks County Reporter

READING -- Many Berks County farmers, as well as farmers in surrounding areas are being constantly challenged with additional problems this Winter, caused by the unpredicable, and more often than not, adverse weather. Compounding the earlier problems of decreased quantities of hay and straw has been the late, and in many cases the incompleted harvesting of Fall crops.

Not only has the delay in harvesting due to the unusually wet Fall caused problems itself, but it has also increased the dilemma faced by many farmers with bedding shortages. With the very high costs of straw, farmers have been relying on corn fodder to ease the straw shortages but have had a difficult time getting it out of the fields because of rain, mud, ice and now snow, explained James Haldeman, Berks County Extension Agent. Some area farmers have had to go to other types of bedding such as sawdust and shavings, he added.

(Turn to Page 21)



The roof is gone at Smyser Richlawn Farm's dairy barn.

Fifty-five heifers owned by Perrydell Farm Dairy were trapped when a roof collapsed over their confinement area.

Farm trucking continues

By DIETER KRIEG

LITITZ -- Neither snow, ice or floods will stop the wheels of agriculture of conditions of the past 10 days can be given as proof of that statement.

While most farmers undoubtedly had their own share of problems and extra expenses to contend with due to the harsh weather of the past 10 days, they at least could heed the warnings of the State Police to stay off the roads. The farmer's work is generally not far from his back door. Many others, however, have miles to drive to work. And a few, such as the truckers, have hundreds of miles to cover regardless of the weather outside.

This area's farmers apparently weathered the storms pretty well as far as deliveries and pick-ups are concerned. The amount of milk which could not be picked up is very minimal, which, in the words of one spokesman, is a tribute to both dairymen and their haulers.

It hasn't been easy, however. Many truckers had their 10-hour days stretched to 14 and more. A few were stranded and could not get home for several days.

Snow fells Farm Show

By JOANNE SPAHR

HARRISBURG -- Fortunately, the Winternational tractor pulls were over before last Sunday evening when pressure from accumulated snow and ice sent an approximated 75 tons of brick crashing through the roof of the new livestock offices and photo room on the western side of the Farm Show complex. It was also fortunate that the Pennsylvania Farm Show, held only two weeks prior, was over, or the estimated $225,000 damage could have exceeded that monetary figure to include the deaths of many persons.

According to Wellington D. Smith, Farm Show director, the incident was partly due to deterioration of that 40 year old segment of the building.

The Farm Show director explained that the complex has a parapet wall around the large arena. This wall extends four feet above the eaves of the roof and serves as a gutter to direct drainage from the roof into the roof drains. From the edge of the parapet wall to the ridge pole or peak of the roof, is about 125 feet. This sloped roof collects a large amount of snow.

Support prices may rise

By JOANNE SPAHR

HARRISBURG -- Tony T. Dechant, president of both the National Farmers Union and the International Federation of Agricultural Producers, brought good news to 95 delegates assembled, here, for the 6th annual convention of the Pennsylvania Farmers Union on Monday and Tuesday.

Speaking at Monday evening's banquet, Dechant told the delegates that as of that morning the chairman of the Senate Agriculture Committee, Sen. Herman Talmadge, D.-Ga., had invited Bob Bergland to come before the committee on Tuesday morning. At that time Talmadge was to voice his support of taking at least 50 million acres of land out of production at the cost of 3½ billion dollars. He was also to recommend to Bergland that the administration increase the loan rate on wheat to $2.75 per bushel, a 50 cent increase which will cost in the neighborhood of $1 billion dollars. He is also proposing that the corn rate be raised by 50 cents, as well, to $2.50 per bushel, and that the loan rate on soybeans go to $5 per bushel. The corn boost will

Cattle future predicted

By DIETER KRIEG

LANCASTER -- Penn State's well-known agricultural economist, H. Louis Moore, predicts slight improvement in cattle prices for 1978, citing decreasing cattle numbers and comparatively low feed prices as the major reasons. He made the predictions during the multi-county Cattle Feeders Day held this week at the Farm and Home Center, here.

Attended by nearly 200 cattle feeders despite bad weather, the Cattle Feeders Day addressed a number of topics of interest to cattlemen. Moore led the program with his assessment of the present economic factors.

The way Moore sees it, a number of uncertainties cloud the future. Some of the ones which aren't directly related to agriculture include the nation's trade deficit, inflation, the energy non-program, the protection of sentiments such as imports, the falling dollar in in-

Lancaster Grain

Friday, Jan. 27, 1978

These prices are made up of the average prices quoted by a number of participating area feed and grain concerns. It should be noted however, that not every dealer or broker handles each commodity. All prices are per bushel except ear corn and soybean meal which are per ton.

The average prices quoted Friday, Jan. 27 are as follows:

	Bid+	Offered+
Ear Corn	55.00	64.00
Shelled Corn	2.27	2.48
Barley	1.98	2.17
Oats		
Local	1.29	1.54
Western	1.82	2.02
Wheat	2.51	2.68
Soybeans	5.28	——
Soybean Meal		221.00

Convert to metric

UNIVERSITY PARK – To "convert" your thinking to the metric way of life may be easy, with help from Penn State's correspondence course on "Everyday Measurements and Calculations in the Metric System."

Mark Shaw, Penn State's associate professor of agricultural engineering, and author of the metric course, points out that information is designed to help you deal more confidently with common math problems. Lessons explain how many cubic yards of concrete are needed to pave a driveway; how to figure per cent moisture in grams in a soil sample; how to convert temperature from fahrenheit to degrees celcius; or calculate the number of square meters of carpeting needed to cover the living room floor.

No use fighting the system – SI, that is. Send your check for $6, payable to Penn State, to "Metric," Box 5000, University Park, Pa. 16802.

Delmarva Poultry

January 25, 1978

Ready-to-cook movement rather slow in most quarters. Slaughter schedules moderate. Today's little asking prices one cent lower at 41 on Plant Grade and 42 on U.S. Grade A. Advance interest slow in developing. Live supplies short as occasional plant not operating because of weights lighter than desired. Undertone weak and unsettled.

Current broiler/fryer negotiated prices for immediate includes mostly multiple-drop shipments to New York City from Delmarva.

RANGE: U.S. Grade A 41-44, Plant Grade 40-42½, Premium X U.S. Grade A 50.00, Premium X Plant Grade 48.00.

WTD. AVG.: U.S. Grade A 42.42, Plant Grade 41.44, Premium X U.S. Grade A 50.00, Premium X Plant Grade 48.00.

X - Includes special services, selected competitive brands, etc.

Philadelphia Eggs

January 25, 1978

Prices unchanged to one cent higher on all sizes. Cartoning demand fairly good. Offerings of larger sizes fully adequate, medium and smalls adequate. Undertone fully steady.

Prices to retailers: sales to volume buyers, consumer grades, white eggs in cartons, delivered: store door.

A Extra Large 56-59, A Large 55-58, A Medium 51-54.

Baltimore Eggs

January 25, 1978

Prices unchanged to 1 cent higher. Demand irregular. Supplies adequate.

Cartoned eggs: prices to retailers, state graded (min. one case sale) white.

Grade A Large 60-64.

Grade A Medium 56-61.

Eastern Pa. & N.J. Poultry

January 25, 1978

Prices unchanged to lower on light type hens. Farm offerings fully adequate for an aggressive buying interest. Offerings of heavy hens fully adequate to ample for a light to fair call

Prices paid at farm: light hen types 7-9, mostly 8½-9.

FOB plant 10½-11, mostly 10½

Heavy type hens TFEWR.

Fogelsville Poultry

January 24, 1978

Prices paid dock weights, cents per pound, except where noted.

Hens, heavy type, 11-15½, mostly 11-12; pullets 11-40, mostly 40; roaster 11-28; ducks 45-50; drakes 36-48; turkeys, toms 20; turkeys, hens 26-35, rabbits 1.10-1.15; guineas 1 16-1.21

Total coops sold 260

Hay Markets

Regional Hay

January 23, 1978

(All hay No. 2 and better, prices paid by dealers at the farm & per ton.)

Hay & Straw steady.

Harvey Z. Martin Hay Market

January 20, 1978

No Sale.

Green Dragon Hay

Wednesday, Jan. 25, 1978

Total 20 loads.

Alfalfa 131 to 141; timothy 95 to 98; clover 1 load 102; mixed hay 94 to 120; straw 123 to 160; corn, 1 load 70.

New Holland Hay

Monday, Jan. 23, 1978
New Holland Sales Stables

Market very active. Hay steady to $5 per ton higher. Straw and bedding $10-20 higher.

Alfalfa 95-133, mostly 100-110; timothy 99-134, mostly 100-110; clover 94-106; mixed hay 93-120, mostly 100-110; straw 119-147, mostly 130-140; ear corn 68-73; stubble hay, few loads 90-100; soybeans stalks for bedding 100.

PACMA Facts

PACMA-FACTS

The following market is supplied by PACMA-FACTS, a direct marketing organization affiliated with the Pennsylvania Farmers' Association. Participating poultrymen are members of PACMA, which employs a fowl marketing agent, The Farmers' Agricultural Cooperative Trading Society (FACT) - to sell members' fowl. PACMA works directly with the PFA poultrymen in the program.

Farm point prices prevailing for fowl to be marketed by members during the week of January 23 were 9 at farm weight; 11 at plant weight.

Not Always

The appearance of food is not always a good guide to its safety When it comes to food poisoning, appearances can be deceiving Illness-causing bacteria do not alter the appearance or odor of a food That's why cases of food poisoning occur so often If an unsafe food looked or smelled bad, most of us wouldn't eat it!

What Will It Be?

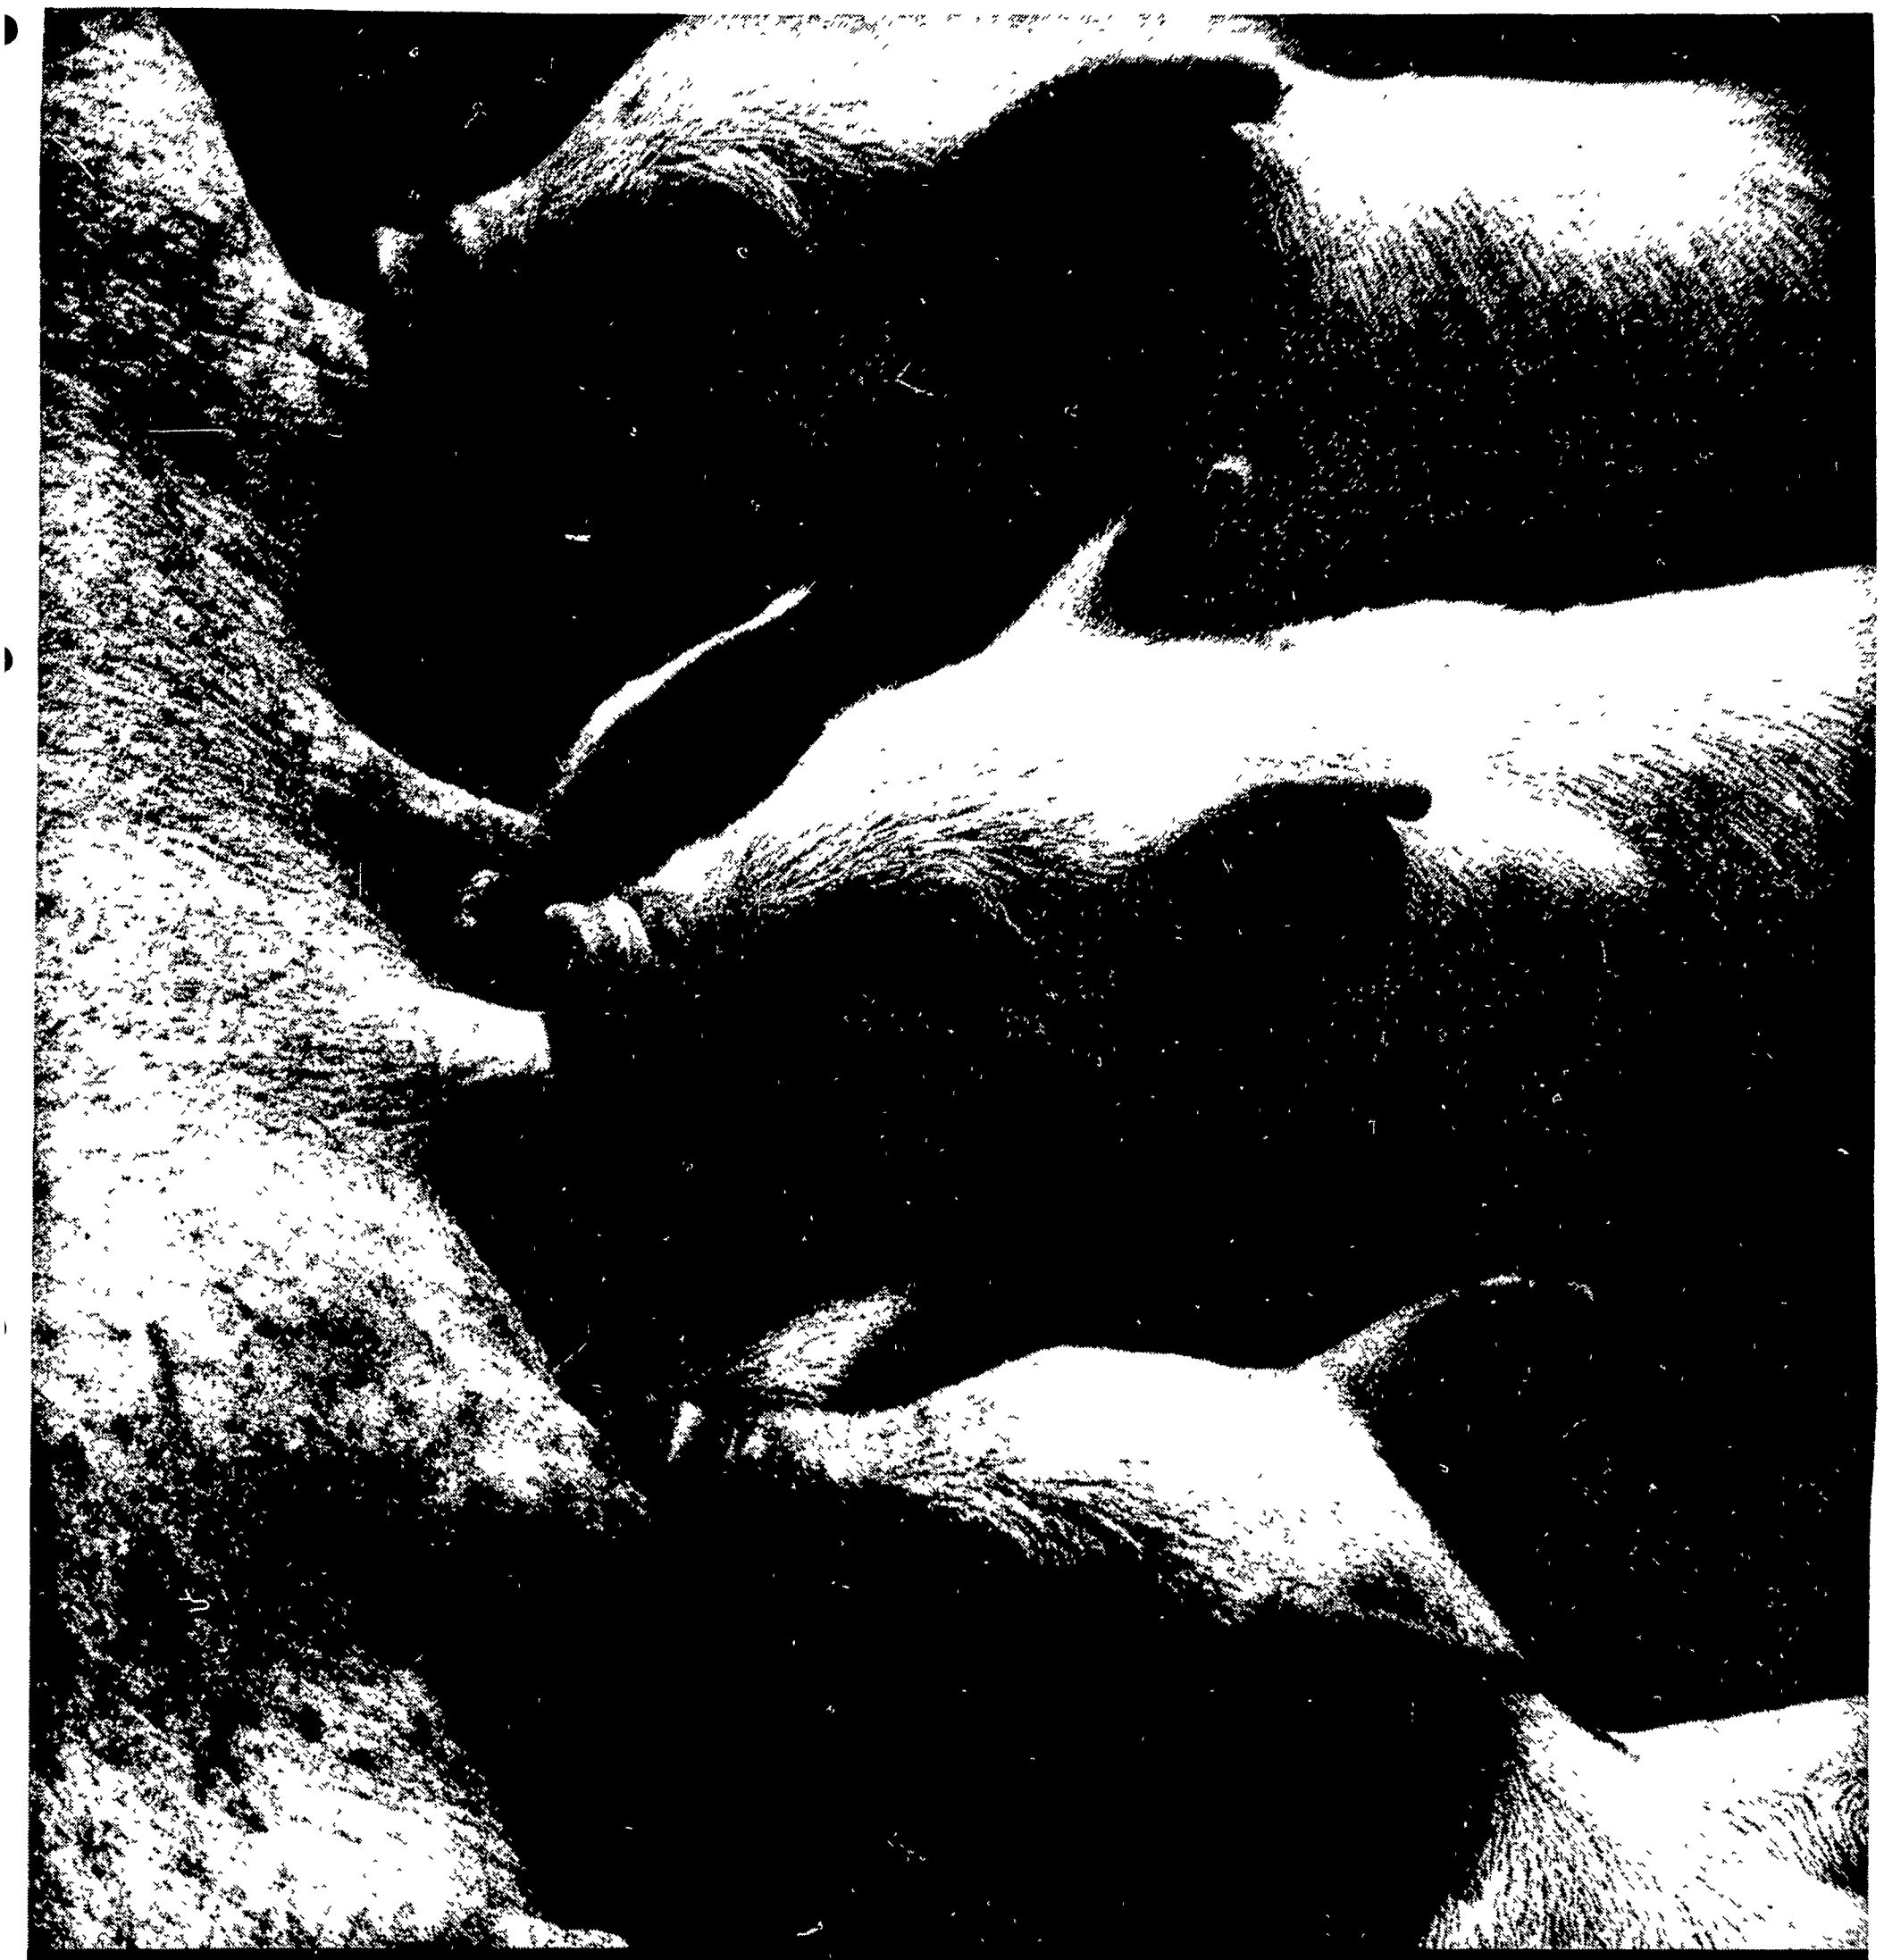
1978 or 1978

There are lean years and there are not so lean years. Every seasoned poultryman has come to expect this. Many variables he cannot control.

Who knows what 1978 will bring? One important decision you can make **now** is to depend on **DEKALB** chicks from **Moyer's** for your next order.

We're in our 31st year.

Moyer's CHICKS, INC.
Quakertown, PA. 18951
(215) 536-3155



From mother to market, we formulate feeds and feeding programs with your profit in mind.

Does pork production represent a sizeable part of your income? Are you ready to devote an hour or so of your time *planning* for a more profitable future?

If your answer to both questions is yes, you owe it to yourself to read what we have to say.

Unlike many other feed companies, we develop feeding and management programs for each individual operation

It all starts with a Pennfield man reviewing your operation with you Your goals. Your records Whether you farrow and finish your own pigs or buy feeder pigs. Your management practices. The health and overall condition of your herd. And other factors that have an effect on your profit potential.

With the aid of computers, we then design programs that can improve your profits by reducing expenses, improving performance, or both.

For example, many producers who switched from a competitive program to a Pennfield program have cut their feed costs and their hogs go to market sooner. In effect, the Pennfield program is putting more money in their pockets.

There is no cost—or obligation—for this unique service But you must take the first step by writing or phoning us. Do it today.

Pennfield Feeds, 711 Rohrerstown Rd , Lancaster, PA 17604. Local calls Lancaster 299-2561, Red Lion 244-4511. In 717 and 215 areas dial toll free 800-732-0467

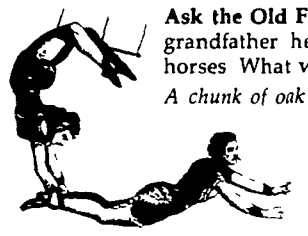
THE OLD FARMER'S ALMANAC

JAN. 30-FEB. 5, 1978

A dole of fierce and piercing cold.

Only half your wood should be gone now "Lone Ranger" first broadcast Jan 30, 1933 Last quarter of the moon Jan 31 Average length of days for the week, 10 hours, 6 minutes Groundhog Day Feb 2 (If he sees his shadow, there will be six more weeks of winter) Four Chaplains went down with torpedoed U S S Dorchester Feb 3, 1943 *It takes little effort to watch a man carry a load*



Ask the Old Farmer: In a diary belonging to my grandfather he referred to "bog shoes" for his horses What were they? R J, Wakefield, R I

A chunk of oak board, rigged with an iron loop, and made to fit on a horse's foot so he wouldn't settle too deep when used to haul off marsh hay

Home Hints Put reflector tape on your dog s collar so he can be seen on the road at night

OLD FARMER'S WEATHER FORECASTS

New England: Fair, very cold with flurries to midweek, cold snap, some sun for week's end

Greater New York-New Jersey: Very cold with flurries toward week's end

Middle Atlantic Coastal. Very cold with flurries to start, partly sunny with cold snap for remainder of week

Piedmont & Southeast Coastal: Very cold with some light snow at midweek, weekend freezing cold

Florida: Rainy, cold, snow north, then cool with light showers through weekend

Upstate N.Y.-Toronto & Montreal: Very cold with snow throughout the region all week

Greater Ohio Valley: Very cold, cloudy with light snow in the mountains throughout the week

Deep South: Cloudy and cold all week

have a nice weekend...

"Which Hybrids do I plant? The Senecas—what else!"

Last year the incredible Senecas 137 140 and 149 sold out again for the third year in a row

Big early yields that get safely into the bin bunk or silo is the main reason Quick come up fast dry down cold wet weather tolerance and fantastic standability are among others All good reasons why you should include the Senecas in *your* corn program for '78

Don t be left out when planting time rolls around Call today and get your order on the books

The AgStar Total Confinement Systems-
Gestation Farrowing Nursery Finishing
Will expand your hog business
for LESS DOLLARS - Let us show you.

SOW CASTLE... the new economical, plug-up-and-go total farrowing environment QUALIFIES FOR TAX INVESTMENT CREDIT

Models come 12 or 24 feet wide (24-foot model shown here), in lengths of 32 or 50 feet. All 24-foot wide buildings have an entry door in each end. See chart on back of this sheet for more specifications.

Built-in ventilation system keeps building dry and provides fresh air for animal health. Unique air flow system pulls air in at roof ridge line, circulates it over the top of the animals, through the pit, and out. Note that design of roof system eliminates the need for any obstacles (sidewalls that could restrict air flow.

Each farrowing stall has an adjustable self-feeder and automatic water cup. Nipple waterers are optional.

Farrowing stalls and nursery areas are equipped with aluminum T-slats in the floor. Front and rear individual slats run across the top and are high, with 3/8" spacing between slats.

Bank Financing & Leasing Available

EDITORIAL COMMENTS By DIETER KRIEG, EDITOR

We salute the truckers

My hat is off to the truckers who keep agriculture on the move even when the worst combination of snow, ice and floods grips the countryside

Having lived on a dairy farm for many years, I can vividly remember the worrying over milk that couldn't be stored or a dwindling feed supply. We got into some pretty tight situations, but we never lost much More often than not, we didn't lose a drop. The men behind the wheels of the trucks were always doing their best.

Truckers have to be among the most dedicated and highly responsible men to be found in any profession Considering the snow drifts, ice, long hours, and downright uncomfortable situations they're faced with during bad weather, they have a monumental task before them In comparison, those frozen water pipes and broken barn cleaners are small problems.

Many a trucker has been stranded somehwere on a lonely road Some have been unable to go home to their families for days due to either being stranded or the demands of their work I know of a number of drivers who have worked around the clock They consistently do all they can to get to the farmer's milk tank, feed bin, egg cooler or what have you

These drivers sacrifice a lot of their personal and family life during these wintry days Granted, they're compensated, and we could say that they're only doing what they're being paid to do But that doesn't make their job any easier or lessen their responsibility What's more, they're really not making all that much According to one milk truck driver, freight haulers make $4 more per hour than he does But that's not the point of this tribute to truck drivers. The point is that truckers are very dedicated men who have to put up with some very negative and even dangerous situations

Just think of the ice and snow around your farm. Then multiply that times dozens of other farms -- some of them with sloping, twisty, ice-covered lanes -- and you have a little idea of what truckers are faced with Add 100 or even 200 miles of roads that are drifted shut in places and slick as grease in between Consider the risk of life and property involved and the hours of frustration

Consider, too, the trucker's wife and children at home No doubt it takes something away from their comfort to know that Daddy is out there someplace in a treacherous storm

Add it all up, and you can't help but be thankful to the very dedicated men who keep your products moving We salute those drivers and congratulate them for the fine work they do

Help defeat S. 1883

Only a couple days remain before the U.S. Senate will act on one of the most dangerous labor bills to come across their desks in a long time. It's Senate Bill 1883, allegedly a "labor reform" package, but in reality a Big Labor gimmick to force workers into unions.

S. 1883 is being opposed by numerous farm groups, including the American Farm Bureau Federation and the Poultry and Egg Institute of America. Opponents of the bill say the measure will force employers to deliver their workers into union hands.

Big Labor, despite its muscle and loud voice, is having a tough time of it, believe it or not. Union membership has been going down, and only about 20 per cent of this nation's work force belongs to unions. Fellows like George Meany are worried about it and have therefore devised a plan to reverse the the trend

Says the National Right to Work Committee, an organization which is dedicated to an individual's right to work:

"Should the full Senate knuckle under and allow the so-called labor "reform" bill to be railroaded through, union organizers would be handed a variety of new legal weapons with which to blackmail employers into delivering employees into compulsory unionism."

Farmers know what unions have done to this country's economy, and to their own efforts of trying to make ends meet. It's therefore imperative that we do our share in preventing union bosses to spread their already too immense powers

It's generally acknowledged that if S 1883 is passed, Big Labor will attack Right to Work laws Such laws give workers the right to employment without having to join a union Removal of that law, known as Section 14b of the Taft-Hartley Act, will make union membership mandatory Workers will no longer have a choice in the matter

Such erosion of personal rights must be stopped The Senate will likely axt on the matter within the next couple of days Your letter to your congressman and senators can help to defeat this evil plan of Big Labor

THE BIBLE SPEAKS

BY LAWRENCE W. ALTHOUSE

THE SILENT VOICES

Lesson for January 29, 1978

In one of the plays about Joan of Arc there is a scene in which Joan and the Dauphin are discussing the "voices" which Joan hears at times. "Why don't the voices come to me?" the Dauphin demands. "I am the king." "They do come to you, Sire," Joan answers, "but you do not take the time to hear them."

Joan's response to the Dauphin might easily apply to many of us: there are sights and sounds all about us through which God would speak to us, but often we do not take the time to either see or hear. A number of years ago I took a group of church youths on a four-day bicycle camping trip through country that I thought was familiar to me. I had driven over its roads many times. Yet, as we pedaled through this countryside it seemed that I was seeing it for the first time. Always before I had sped by in my car, but now I was going slow enough to really see.

The Psalmist tells us that there are many voices in nature that tell of the glory of God the Creator. But they are voices, for the most part, without sounds: "There is no speech, nor are there words: their voice is not heard; yet their voice goes out through all the earth, and their words to the end of the world" (Psalms 19:3,4). The creation about us can speak to us without words or sounds and still reach the depths of our hearts.

Stand out under a star-filled sky some night and "Listen" to what that twinkling host is saying to you. There will be no sounds issuing forth from the inky depths of space, but there is a message for the person who is receptive, who will take the time to open his or her life to it. Stand and look over a vast prairie carpeted with grain and there will be soundless voices speaking to the inner depths of our being.

More than gold

The writer of Psalms 19 heard other voices as well. When he considered the law of God, the moral goodness and order which God had given to Israel, he heard another kind of voice or voices. Whereas the voices of nature spoke of God the Creator, he found the voices of law speaking of God the Good and Holy. Speaking of God's laws, the psalmist exalts: "More to be desired are they than gold, even much finer gold; sweeter also than honey and drippings of the honeycomb" (19:10).

People need to listen to both kinds of voices, not just one or the other. We need to listen to the voices of nature and feel that sense of grandeur and might that are reflected in creation. But we need also to listen to the voices of God's will and law so that we might experience anew the sense of security that comes in encountering and worshipping a God of moral perfection.

Are you listening?

NOW IS THE TIME

By Max Smith, Lancaster County Agricultural Agent

Phone 394-6851

TO TRANSFER SILAGE

Silage producers who have had surplus corn or grass silage stored in temporary structures should be giving some thought of moving it into the upright silos when weather permits. This practice is quite common among dairy and cattle feeders in order to utilize a maximum amount of the crops in the form of silage. When this job is done in cold weather, there will be less danger of heating and spoilage of the silage. When the job is started, it should be completed as quickly as possible. Many producers need to move this extra silage in order to feed it through their mechanical feeders. Don't wait until hot weather to make this move.

TO PLAN CROPS FOR THE YEAR

With all the snow that has been on the ground for the past week, it seems untimely to be thinking about the crops that are needed this year; however, in another eight weeks the 1978 cropping season will be getting started and no doubt some early items may be in the ground. This means that plans should be made soon for the supplies needed and get them ordered. Livestock and dairy producers should not overlook the value of growing and using maximum amounts of roughages in their rations. Silage and hay are low-cost feed nutrients and maximum production should be planned. In addition, straw is a very scarce and expensive farm commodity, and no doubt worthy of careful harvesting.

TO EVALUATE ROOF CONSTRUCTION

The recent heavy snowfall placed special stress of all roofs and I'm sure that a good many folks were concerned about the safety of their buildings. The recent snowfall was the most that we have had in recent years, but still was not a record amount. I can recall a 30-inch snow in early March a number of years ago that was a very wet snow and was extremely hard on roofs and wires. If this should occur again, I'm wondering how some of the more recently built buildings will stand up.

Week ago	4,800
Year ago	8,400

Compared to the previous weeks close, slaughter steers and heifers steady to weak, instances .50 lower. Cows steady to 1.00 lower. Bulls generally steady. Supply mainly Choice 2-4 1000-1200 lb. steers, around 25 per cent heifers and 15 per cent cows.

SLAUGHTER STEERS: Mixed Choice and Prime 2-4 1050-1250 lbs. mostly 44.00, two loads at 44.50. Choice 2-4 975-1250 lbs. 42.00-44.00. Mixed Good and Choice 2-4 900-1225 lbs. 41.00-42.50. Mixed Good and Choice 2-3 1125-1300 lb. holsteins 37.50-38.50. Good 2-3 900-1200 lbs. 37.00-41.00. Standard to good 2-3 1075-1325 lb. Holsteins 34 50-38.00.

SLAUGHTER HEIFERS: Mixed Choice and Prime 2-4 875-1050 lbs. 42.00-42.50, mostly 42.00. Choice 2-4 800-1050 lbs. 40.00-42.00. Mixed Good and Choice 2-3 700-1000 lbs. 38.50-40.50. Good 2-3 700-975 lbs. 34.50-38.50.

COWS: Utility and Commercial 2-4 28.00-30.50. Boning Utility 30.00-32.00, late 31.00-32.00. Cutter 1-2 26.50-29.50. Canner and low cutter 24.00-27.00.

BULLS: Yield Grade 1-2 1050-1900 lbs. 31.00-36.00, couple yield grade 1 1825-1965 lbs. 36.50 and 37.00.

FEEDERS: Including ·ound 800 at regular - ursday, auction. Feeder ·· ers and heifers 1.00-2.00 h·gher. Receipts curtailed by blowing snow and adverse road conditions. Demand Good. Supply lately Choice and Mixed Good and Choice 400-800 lb. steers and 400-600 lb. heifers.

FEEDER STEERS: Choice 400-500 lbs. 45.00-47.00; 500-600 lbs. 44.00-46.50; 600-700 lbs. 42.75-44.25; 700-800 lbs. 41.00-43.75. Mixed Good and Choice 375-600 lbs. 42.50-44.50. Few lots good 400-600 lbs. 41.00-42.50. Couple lots standard 550-625 lb holsteins 33.50-34.25.

FEEDER HEIFERS: Choice 325-500 lbs. 37.25-39.25; 600-625 lbs. 36.75-37.75. Mixed Good and Choice 400-600 lbs. 34.00-36.50

STOCK COWS· Few lots good 29.00-30.00

Omaha Cattle

January 26, 1978

Cattle - compared with last week's close.

Closing prices on slaughter steers were weak to mostly 25 cents lower Heifers closed steady to 25 cents lower Cows were weak to 50 cents lower, and bulls closed steady

Four day receipts 14,2·0 as compared 15,700 previous week and 15,300 a year ago. Moderate marketings offset much of the bearish effects of a slow moving early carcass trade which reflected partially the severe storm conditions prevailing over the eastern portion of the country; trucks were often tied up en route to their eastern destination over the weekend and the late return created some temporary shortage of rolling stock for carcass movement. In the live trade most buying interests were not aggressive for numbers beyond immediate requirements a large share of the steer and heifer supply was good to aveage choice and with warming weather early feedlot conditions worsened which further aggravated the mud problem. Steers made up approximately 38 per cent and heifers 32 per cent cows comprised 14 per cent and feeders 12 per cent.

STEERS: Two loads and part loads choice and prime 3-4 1090-1300 lbs. 44.75-45.00, few loads same grade 3-4 1100-1249 lbs. 44.50. Choice 2-4 975-1300 lbs. closed 43.25-44.50. Mixed good and choice 2-4 950-1250 lbs. 42.25-43.50, some mostly choice carrying substantial mud 42.75-43.25. Good 2-3 38.00-42.25, consignment 1250-1333 lb. holsteins wtih end choice 40.00-40.50. Standard and good 2-3 36.00-37.50.

Average of LS-214, detailed quotations, for choice 900-1100 lb. steers this week 43.62; choice 1100-1300 lbs. 43.88. Average weight steers first three days 1136 lbs as compared 1126 lbs. previous week. Average weight heifers first three days 982 lbs. as compared 987 lbs. previous week.

HEIFERS: Four loads and several part loads choice and prime 3-4 975-1139 lbs. 42.75-43.00. Choice 2-4 875-1100 lbs. 41.25-42.50. Mixed Good and Choice 2-3 850-1000 lbs. 39.75-41.00. Good 2-3 36.00-39.50. Standard and Good 2-3 33.00-35.50.

COWS: Utility and commercial 2-4 28.00-30.00, few 30.50. Canner and cutter 24.50-28.00. Heiferette type 31.00-34.00.

BULLS: 1-2 1300-2000 lbs. 31.00-36.00, individual 1 36.50-37.00.

WHAT'S NEW

QUICK ATTACHING LOADER

A quick-attaching loader for tractors in the 65-90 horsepower range, with or without cabs, has been introduced by Schwartz Manufacturing, a division of the Chromalloy Farm and Industrial Equipment Company, Lester Prairie, Minn. Exclusive dual guide cones on the 1800 QT loader allow easy attaching and positive 360 degrees holding when mounted. A front mounting bracket absorbs up and down stress while providing thrust support.

Attaching or detaching the 1800 is less than a five minute one man job requiring no tools. The loader is held in place by single levernuts on each side of the upright arms. Adjustable stands carried on the frame park the loader for easy, drive-in attaching.

The 1800 QT loader packs high strength into a wrap-around subframe and boom arms with a reinforced cross member and 50,000 PSI yield strength. Reinforced knee plates incorporate the cylinder pivot and greaseable 2½ inch wide steel end castings attach buckets.

Lift capacity of the 1800 is 2900 lbs. to the full lift height of 10 foot 5 inches. Breakaway is 5400 lbs. and clearance with attachments dumped is 9 foot one inch. Reach is 40 inches at maximum lift height.

Mounting brackets are available to fit the 1800 to a wide range of domestic and foreign tractors. Eight attachments from the 42 inch manure bucket to the 84 inch slip-on snow bucket equip the 1800 for a wide range of materials handling jobs.

Introduction of the 1800 gives Schwartz a complete line of quick attaching loaders for tractors from 50 to 95 horsepower. Other loaders include the 1700 for utility or row crop tractors from 40 to 65 horsepower and the 1900 high-lift model for 65 to 95 horsepower tractors.

ROW CROP TABLE INTRODUCED FOR MASSEY—FERGUSON COMBINES

A new six-row, 30 in. row crop table for use with MF combines will be available from Massey-Ferguson in 1978. Designed primarily for harvesting soybeans, the table can also be used for grain sorghum (milo) and sunflowers.

With the new row crop table, harvesting losses are reduced through more gentle handling of the crop during the cutting process and feeding of cut material to the combine. It handles weedy crops easily and requires no timing adjustments.

Similar in appearance to a corn head, the new variable speed row crop table operates with four nylon brush-filled V-belts, two on each side of a soybean row. The brushes gently gather the crop, hold it while a rotating, star-shaped knife cuts the plant just above the ground level, and then feed the cut material to the combine cross auger. The flexibility of the nylon brushes and the open bottom design reduce the possibility of picking up stones and dirt.

Initially available only in 30-in. row size, the row crop table will later be available in other sizes.

You're in control with a

HOMELITE® CHAIN SAW

- safest, most controllable chain saw we've ever sold!
- all lightweight, precision balanced, easy to handle — with solid, comfortable grips.
- only chain saws with exclusive SAFE-T-TIP™ that prevents kickback.
- powerful enough to do all your cutting jobs easily, quickly!

HOMELITE SUPER XL Automatic Chain Saw
- Exclusive SAFE-T TIP™ prevents kickback keeps you in control
- Top quality lightweight for heavy duty performance
- 3 5 cubic inch hemi head engine
- Automatic and manual chain oiling
- The tough chain saw for farmers and ranchers

Results posted for Winternational tractor pull

HARRISBURG -- The following are the results of the Penn Winternational tractor pulls held at the Farm Show Coliseum in Harrisburg last Friday and Saturday.

SESSION I

1200 Superstock

1. Mike Wright, New Freedom, Pa., IH 1066; 2. Bob Williams, Groveport, Ohio, AC D-21; 3. Vern Over, Sligo, Pa., IH 856.

5000 Modified

1. Gary Mills, Falston, Md., AC with 427 Chevy engine; 2. Scott Baker, Jonesville, Mich., with a CK 570-454 Chevy; 3. Gary Baldwin, Wauseon, Ohio, CK 40 with 454 Chevy.

SESSION II

5000 Superstock

1. Dave Thompson, Ithica, Ohio, AC-180; 2. Dale Smoker, Cochranville, AC-180; 3. Volland N. Lucas, Columbus, Ind., AC-WD.

9000 Modified

1. Dave Haley, Hanoverton, Ohio, Ford 9000 - Allison; 2. J. N. H. Team, Fultonham, N.Y., C K 2 -427 Chevies; 3. Robert Hughes. New Windsor, Md., CK 40 - Hemi.

SESSION III

7000 Modified

1. Don Harness, Dana, Ind., JD - 454 Chevy; 2. Larry Jones, Washington, Ind., Ford - 454 Chevy; 3. Gerry Baldwin, Wauseon, Ohio, CK 40 - 454 Chevy.

9000 Superstock

1. Bob Williams, AC D-21; 2. Harry Griest, Coatesville, Pa., IH - 1456; 3. Marlin Brubaker, Quarryville, Pa. AC D-21.

SESSION IV

7000 Superstock

1. Mark Stauffer, Ephrata, Pa., Deutz 9006; 2. Tim Stauffer, Ephrata, Pa., Deutz 8006; 3. Don Thomas, Boonsboro, Md., J.D. 4020.

1200 Unlimitied

1. Judge Team, Ansonia, Ohio, MH 55 - Allison; 2. Dave Haley, Ford 9000 - Allison; 3. Harry Griest, I H 1456.

This week's heavy rains and melting snow created flash flood conditions in many areas which resulted in many problems for farmers. There were reports of roof and wall cave-ins, and flooded areas which caused extensive damage.

Life on the farm By Dieter Krieg

A fiercely cold wind, carrying an endless cloud of icy snowflakes, battered my bare face Coming straight at me from the west, it made it nearly impossible to see, and sometimes even difficult to breathe.

My feet were beginning to get numb as I drove back and forth along the lane from the barn to the road, clearing the snow away with an older model farm tractor which had no cab and only a small blade which wasn't designed for pushing snow. Progress was slow, and oftentimes I wondered if it wasn't really the storm which was winning this battle.

When milking time approached, I had been out on the tractor for nearly three continuous hours. My coat, hat, pants, and boots were covered with snow and ice. My face felt as though it was melting when I stepped into the warmth of the milk house to assemble the milking machines and connect the pipeline to the bulk tank

Outside, there was no let-up on the steady assault of the storm. More than a foot of snow was already on the ground. and there was no telling how deep some of the drifts might be. The wind whistled; sheets of tin were starting to come loose; doors rattled; and the electric wires heaved back and forth, making me wonder when they might snap

While cows waited to be milked, I wished I could turn each one of them off I didn't want to be milking that afternoon, and I stalled as much as I could, frequently walking to the windows to observe what was going on outside If those electric wires snapped then there would really be trouble because cows do have to be milked regardless of the weather or presence of electricity.

The highway was approximately a quarter mile away A pale-yellow beam of light faintly penetrated the curtain of snow and for an instant there was a flash of joy that ran all through my body As the lights approached the end of the lane, I silently repeated "turn in, turn in!" to myself. The vehicle kept going and all of a sudden I felt even more tired and weak than before.

I lifted the lid of the bulk tank and stared into if for a moment before continuing to assemble the milking equipment. The milk was within three inches from the top. When the agitator was turning, it actually spilled some milk over the edges. Each inch in height represented about 200 pounds of milk. I guessed it would hold 500 more pounds if the agitator were turned off The cows would produce around 1,000 pounds tonight

The phone rang. A neighbor wanted know if the milk truck had picked up our milk yet, "No," I said, "we expected him this afternoon - the driver's wife had called about making sure the lane was clared, but he must not have returned from Philly yet "

Two-thousand pounds of milk and 15 hours later, the milk truck pulled up to the milk house. the snow had crippled things all over the place -- at the milk plant, on the roads, and on farms Farmers lost a lot of money during that storm six years ago and milk truck drivers lost an awful lot of sleep trying to get their tankers from one place to another.

SHIVVERS CIRCU-LATOR

Circu-Lator tranforms your drying bin into a totally automated Continuous Flow System with drying capacities of 1,600 to 6,000 bushels of corn per day (25% - 15%) depending upon bin and fan size. It dries high moisture grain (30% and above) with ease, and operates around the clock without babysitting.

With the Circu-Lator, your entire bin becomes a surge tank — fill it as fast as you harvest. When adjacent storage bins are full, the Circu-Lator becomes a high capacity Recirculating Batch Dryer which may be rapidly filled to the eaves.

Check into the Circu-Lator. See why the Best Continuous Flow System is also the simplest and least expensive.

Meat, eggs, and dairy foods under pressure

HOUSTON, Tex. – "The greatest moment of opportunity for animal agriculture in America for the remainder of this century is here in 1978," members of the American Farm Bureau Federation heard here earlier this month.

"Yet, if we fail to provide positive action in three major areas, then I fully anticipate that animal foods, as preposterous as this may seem, will be regarded as little more than alternate dietary protein garnished by the next generation," predicted National Live Stock and Meat Board President David H. Stroud at the Farm Bureau's 59th annual convention. He said that a concerted movement is gaining momentum to reduce the historic reliance on animal foods.

"The movement is both created and promoted by those who believe it is unconscionable to grow livestock, especially cattle, when (they think) grain production would better serve mankind," Stroud stated. He noted that while most people who hold to that belief are sincerely motivated, their argument generally is supported by faulty information on what kind and how much grain livestock are fed.

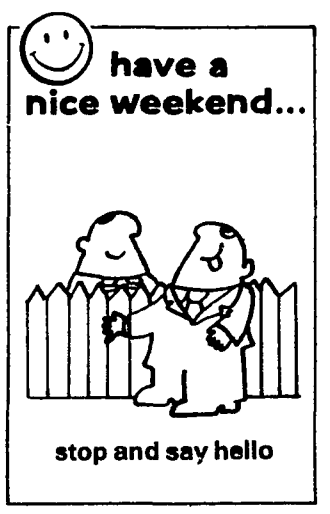
"They are abetted by those who believe they have seen all the medical evidence indicting animal foods as instrumental in the genesis of heart disease, and even cancer; they are further abetted by commercial interests promoting substitution of polyunsaturated oils and vegetagle protein food alternatives," he continued. "Applauding in the wings are all those active vegetarians who think they have heard the true nutrition gospel."

Meat, eggs and dairy foods are under more pressure than ever before, said Stroud. He cited three opportunity areas for these products to retain their dominant market position: appropriate food information services to the consumer; patient counseling to the government at legislative and regulatory levels; and recognizing and seizing opportunities honestly and ethically.

"Nutrition," Stroud said, "has recently been discovered by the Congress, regulatory agencies of government, the administrative branch, consumer food activists and many parts of the food industry. It's about time. The problem this massive and sudden awareness presents, however, is that nearly everybody wants to be in charge of nutrition, no matter how little they may be qualified on the subject. Likewise, it appears that nearly everybody wants to make recommendations for your dinner menu and mine, no matter how little they know about the functions of food in nutrition and health.

"What seems most widely extant," the Meat Board President said, "is the canard that animal foods – especially meat and eggs, but not excluding dairy foods, poultry and seafoods – are not good for you. The least of these critics note that eating a good deal fewer of the traditional animal foods won't hurt anyone. The greatest of these critics say our meat-eating habits are killing us.

"This is absolute poppycock," Stroud said, citing a recent statement by the chairman of the Food and Nutrition Board of the National Academy of Sciences who, in response to criticism of America's eating habits, stated: "The American diet today is better than ever before and is one of the best, if not the best, in the world today."



Using Water

Americans are using approximately 60 gallons of water a day — triple what was used in 1900 The lawn and yard account for about 40 per cent of domestic water use

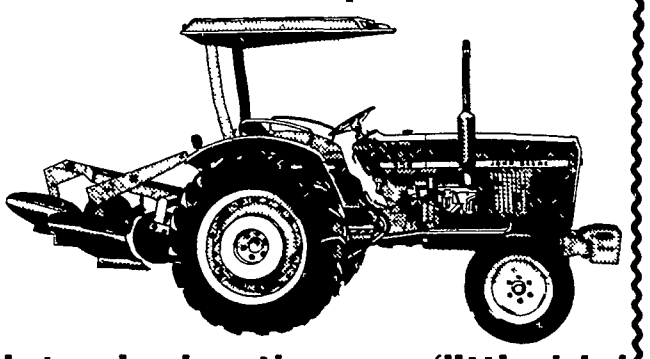
Why settle for just a used farm tractor when you can own a new John Deere for about the same price?



Introducing the new 'little-big' tractors...22- and 27-PTO-hp diesels with big-tractor features, small-tractor prices

A little money goes a long way when you invest it in a new 'little-big' tractor from John Deere Small in size, big in big-tractor features, the 850 and 950 are priced so economically that you can own a new one for about the same price as a comparably equipped used tractor And, there's something else you get that doesn't come with a second-hand machine—a new-tractor warranty, backed by people with a reputation for parts, service and financing

These little-big tractors feature dependable 3-cylinder engines with wet-type sleeves The 850 has 22 PTO horsepower, the 950, 27 PTO horsepower You also get rugged 8-speed transmission, 540-rpm PTO, differential lock 3-point hitch (Category 1), adjustable drawbar, and much more In addition, there's a complete line of capacity-matched implements—more than 20 in all—to help you keep your farm running profitably

Come in today for a demonstration You'll be amazed by what these little-big tractors can do

Manure feeding raises questions

By DIETER KRIEG

NEW HOLLAND – A lot of questions have to be answered yet about the idea of feeding manure to farm animals. One thing that is certain is that an awful lot of good public relations work will have to be done in order to sell the concept to housewives and even many farmers. Knowing this, the Federal Food and Drug Administration (FDA) is continuing to withhold its approval of the practice.

Feeding manure to livestock is not necessarily illegal. A farmer may do it, but he does so at his own risk and he will be liable for prosecution if a detrimental effect can be traced back to his feeding program.

Dr. C.C. Calvert, research scientist with USDA's research center at Beltsville, Md., told a group of farmers meeting here last Tuesday evening that a lot of research has to be done yet before the practice will be widely accepted. His presentation was sponsored by the Garden Spot Adult Farmer program.

Having conducted extensive research in ensiling poultry manure and feeding it to cattle, Calvert showed slides of the procedures while explaining research findings. Similar work has been conducted at other research institutions as well, including Penn State University.

Although Pennsylvania is not one of the eight states where feeding animal wastes is state-approved, the concept is in use at some farms.

Regardless of the esthetic drawbacks and unknown risk factors, animal manures have been proven to contain digestible amounts of non-protein which can be economically recycled through the digestive tract. Mixing a combination of 20 per cent poultry manure with 80 per cent corn stover, for example, can give the farmer the equivalent protein feed of the complete corn plant. In essence, the 20 per cent added poultry manure is equal in protein to the corn ear.

Farmers are generally opposed to the idea despite these findings, however, It's not likely that many Lancaster County farmers will experiment with the idea of poultry manure even though it could lower their feed costs considerably.

Aside from their opposition from an esthetic standpoint, scientists are giving additional reasons for caution due to the unknown risk factors. According to Calvert, for example, some of the present concerns about feeding manures include drug residues, disease organisms, heavy metals, and "everything in between."

Some of the work at Beltsville has included taking dried chicken manure and spreading it on top of loads of corn silage. The unloading process mixes it thoroughly, says Calvert. Some other ways of ensiling poultry manure may also be put to use.

Different manures must be handled in different ways, Calvert told his audience. The droppings gathered from a caged layer operation, for example, can't be ensiled straight due to their low carbohydrate content for sufficient lactic acid production. Litter from broiler houses, however, can generally be ensiled as is, providing it is dry enough. The difference is simply the bedding content.

One area in which farmers must be particularly careful if they're feeding broiler manure is in sheep nutrition. Sheep are very sensitive to copper levels, which could run relatively high in broiler litter. Other than that, Beltsville researchers discovered no significant problems. Calvert adds that although feeding animal wastes to food producing animals may be frowned upon and indeed risky, it's a different situation if its just fed to brood animals. USDA research has found no reasons as to why it couldn't be done except in the case of sheep and some individual animals which will absolutely refuse to eat the stuff.

Calvert admitted to having problems with the latter. One of his test animals which was previously a good eater, went completely off feed when the manure-feed mixture was introduced. He had no choice but to place the animal on a normal feeding program.

Research at Beltsville has not shown significant differences in rate of gain between test animals fed dried poultry excreta in their rations compared to more conventional feeds. In a few cases the production is actually increased, but in most cases, especially with dairy cows, production is depressed. The only major economic saving is in feed costs.

Depending on how the manure will be utilized in the feed, it can be added in most any form from raw to dried. If the manure is stored by itself, however, it's essential that it be down to a 15 per cent moisture level or less.

According to research done at Penn State, steers fed a mixture containing as much as 40 per cent manure ended up yielding choice, tasty cuts of meat. According to an article carried by the Associated Press two years ago, "a panel of diners even tended to favor meat from steers fattened on the manure mixture."

The major reason animal wastes are being considered as feeds is that conventional protein sources are constantly rising in price. It's thought that production costs can be held down if wastes are utilized in this manner.

Penn State animal nutritionist Dr. T.A. Long says a steer only digests about 60 per cent of his feed intake. The remaining 40 per cent can therefore amount to substantial amounts of undigested nutrients. The recycling process can boost the efficiency of feeds.

Despite the favorable research that has come out of leading research institutions, FDA and many farmers remain unconvinced – or at least cautious.

The Department of Health, Education and Welfare, Food and Drug Administration, published its stand on the issue in the Dec. 27, 1977 Federal Register. The 14-page document gives an update on research findings to date and invites farmers to contribute their views and information.

For further information from FDA, agriculturalists are asked to contact the FDA, 200 C Street SW, Washington, D.C., 20204. Submitted material should be received by June 26 of this year.

Anthracnose?
Plant Saranac AR and forget it!

If you're struggling with alfalfa because of anthracnose problems, just plant Saranac AR and forget the problem. Where ordinary alfalfas fold up and fade away, Saranac AR flourishes and goes right on producing the kind of yields farmers expect from an alfalfa named Saranac.

And when it comes to bacterial wilt and hard winters, Saranac AR meets them head on. Highly wilt resistant. Able to stand up to the toughest winters. It's the strongest growing alfalfa you can plant.

Certified Saranac AR. The only one to plant where anthracnose threatens ordinary alfalfas. Bred for your kind of land. Bred to meet your seven and eight ton objectives.

For more information on anthracnose-resistant Saranac AR, see your dealer.

Conference slated for Feb. 12 - 14

Pa.-Md. roadside marketing program announced

UNIVERSITY PARK – Mr. Donald Green and his wife, Marylou, well known operators of a seasonal roadside market and u-pick berry acreage on a small farm near Mansfield, Ohio, will be featured speakers at the Eleventh Annual Pennsylvania-Maryland Roadside Marketing Conference. It will be held at the Sheraton Inn, five miles south of Gettysburg, beginning Sunday evening, February 12, and continuing through Tuesday afternoon, February 14. Featuring educational presentations on sales methods for farmers operating roadside markets, jug milk stores, stalls in farmer's markets and pick-your-own sales, this conference has attracted over 300 farmer-retailers and their helpers in recent years.

Green, besides operating a successful diversified direct marketing operation, is employed by the Fire Prevention Bureau for the City of Mansfield. The skills he has developed as a public speaker on fire prevention has made him a very effective and entertaining spokesman on the art of selling farm produce to the public. Don and Marylou cultivate a large assortment of vegetables, a small peach orchard, plus u-pick strawberry and raspberry acreage and maintain 30 bee stands. The Green's experiences in overcoming a frost problem with peach trees, a serious disease problem in their melon patch and the instant success they achieved with Heritage Raspberries are expected to be of special interest to those attending this conference.

Other featured speakers scheduled to present illustrated descriptions of their farm store buildings and sales methods are Carol and Darlene Lerew, Dillsburg, Pa.; Donald Graybill, Triple G Farm, Stevens, Pa.; John Peters, Peters Orchards, Gardners, Pa.; and Lester Dodd, Dodd's Dairy Farm, Corry, Pa.

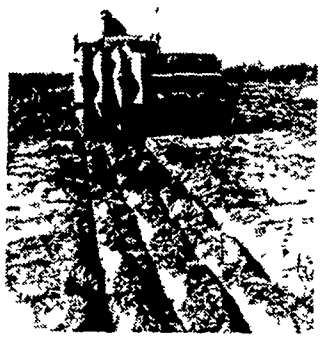
Split sessions will provide an opportunity for in depth discussion of these topics: vegetable and small fruit production planning to meet customer demands; expanding the assortment of vegetables and berries in u-pick selling; increasing sales in farm milk stores and factors in purchasing off-farm products for resale in farm stores.

Don Green

In selecting speakers, moderators and panelists for this year's program, planners have recognized that wives, daughters and female employees frequently manage farm store sales work. Women managers who will be helping present the program in addition to those named elsewhere include Mrs Paul (Peg) Linvill, Mrs. Richard (Barbara) Solly, Mrs. Samuel (Beverly) Minor, Mrs. William (Jean) Hileman, Mrs. Eugene (Jan) Harding, Mrs. Gordon (Marlene) Sheetz, all of Pennsylvania. Maryland women participating in the program are Mrs. John (Theresa) Schatzschneider, Mrs. Larry (Polly) Moore, Mrs. Hal (Timmy) Zimmermann, and Mrs. George (Carol) Lohr.

Henry Frecon, President of the Pennsylvania Certified Farm Markets will give a welcoming talk on Monday Morning and later conduct a demonstration of the use of shrink film in overwrapping fruit gift baskets.

Apple orchardists will be treated to an illustrated talk of the operation of a revolutionary new method of extracting apple juice. The Lerew sisters will describe the operation of the Howard Roto Press recently installed at their orchard near Dillsburg.



SOIL TREATMENT...Invention of soil scientist Robert M. Dixon USDA's Southwest Rangeland Watershed Research Center, Tuscon, Ariz., this new tillage implement presses furrows and seedbeds of varying depths on depleted rangeland — directing runoff rainwater and concentrating it where new grass is seeded.

Figure it for yourself.
You get top feed conversion & better daily gains with Bovotone 12-D.

Relying on homegrown grain and roughage this year? Make your cattle more feed-efficient by fortifying their rations with Bovotone 12-D.

Grain and grain silage, while high in energy, are low in minerals, vitamins, and other nutrients that promote top performance. Bovotone 12-D corrects these deficiencies and encourages maximum feed intake when high levels of silage are fed.

Keep your out-of-pocket costs low throughout growing and finishing periods by using the most economical source of additional protein available.

Bovotone 12-D makes a difference you can take to the bank. Your figures will prove it.

Use 10% less feed with Bovotone No. 76
If your feed supply is low, or you simply want better feed efficiency, fortify with Bovotone No. 76. This highly potent pre-mix contains Rumensin* plus all the vitamins and minerals needed to properly fortify feedlot rations. You can save over 10 percent on your feed supply, and that means more profit for you.

Now is the time to compare.
See your Vigortone dealer soon. He's ready to compare the performance of Vigortone's low-cost cattle feeding programs with any other you name.

* Rumensin is Elanco's trademark for monensin sodium

Barns collapse

(Continued from Page 1)

in the older barn was undamaged, and milking operations of the 60-cow herd are being done there. A portion of the milking animals are housed at an adjoining heifer barn.

Smyser has been in the dairy business at the East Berlin farm since 1946. As family, friends and neighbors gathered last weekend to begin cleaning up the tangled and twisted remains, plans were already being formulated to rebuild.

Another York County farm became the victim of January's wrath when Wednesday's rain weighted down an already heavy accumulation of snow on the roof of a barn owned by Perrydell Farm Dairy, 90 Indian Rock Dam Road, operated by brothers George and Roger Perry.

Rain-laden snow slid from a high barn roof onto an adjoining truss-style lean-to where 55 breeding age heifers were confined. The 40 by 50 feet loosing housing roof plummeted onto the animals killing two and seriously injuring three others that had to be destroyed.

Russell Hartman, who resides at the York R8 farm, saw the structure collapse at 6:30 a.m. and alerted the owners. A portion of the roof at the feeding area was supported with posts and remained standing. Equipment from a nearby construction firm was brought in to clear away the timbers and roofing material.

A spokesman for the Perrydell farm said he expected the barn to be rebuilt.

The weight of snow and ice damaged numerous barns, homes, and warehouses during the past week. This heavily damaged barn is on the Roger Perry farm in York County.

Other reports of disasters came from nearly all parts of Pennsylvania, with flood waters rampaging through basements and some barns. Many fields were swamped as of mid-week, after which plummeting temperatures turned them into ice ponds. Numerous roofs and buildings collapsed, sending damage figures into the hundreds of thousands of dollars.

With highways often blocked due to floods, help could not always be on the way promptly.

The toll of damages continues as of this weekend.

Friends and neighbors gathered at the Smyser Richlawn farm to clear away the remains of a collapsed portion of the dairy barn.

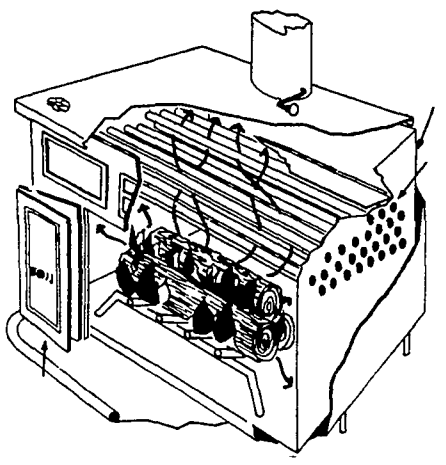
A **Hydro-Heater Franklin** will cut your fuel costs...
Can heat your whole house, even when it's zero outside!



A 1¼" water jacket surrounds the fire on back, sides and bottom. This allows you to place the Hydro-Heater Franklin within 6" of any wall or partition, because the outside temperature never exceeds 210°.

Directional flow tubing captures the heat that is normally lost up the flue. 65% of the heat collected in Hydro-Heater is absorbed by the tubing section. This heat is then transferred to your existing heating system.

AVAILABLE ARE HOT WATER HEAT EXCHANGERS FOR DOMESTIC HOT WATER SYSTEMS

Also Available Are Fireplace Units

A **Hydro Heater Franklin** gives you a 300 to 500 per cent increase in heat output over normal Franklin-type stoves. In fact, you get a 175,000 BTU output with a **Hydro-Heater Franklin!** And with a Hydro-Heater, you don't put up with the "freeze or fry" situation experienced with ordinary Franklin type stoves. That's because Hydro-Heater transfers its heat to your existing home heating system to warm every room in your house. Why settle for just any conventional wood-burning stove when you can have a beautiful, efficient **Hydro-Heater Franklin.**

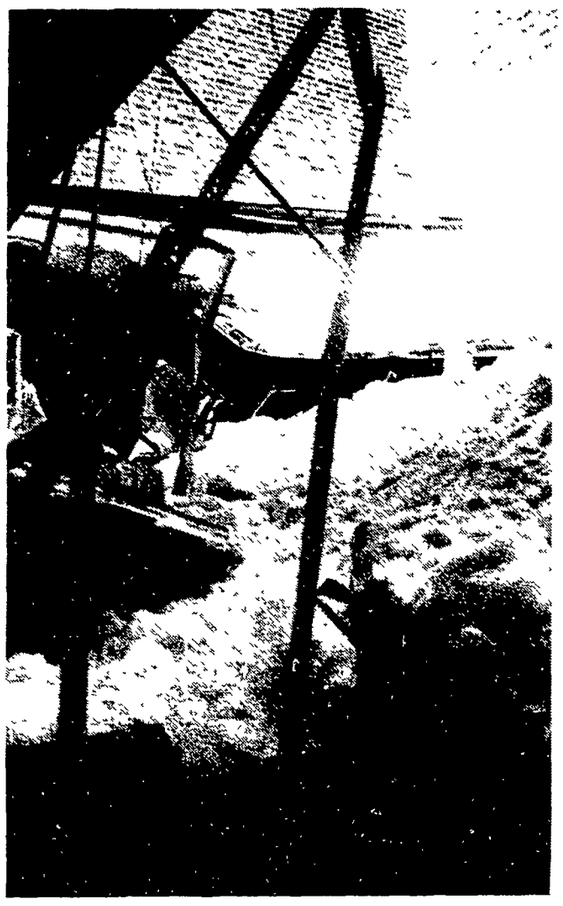
Snow fells Farm Show



This debris used to be an office at the Farm Show complex before bricks crashed through the roof on Sunday, filling it with snow and building material.

(Continued from Page 1)

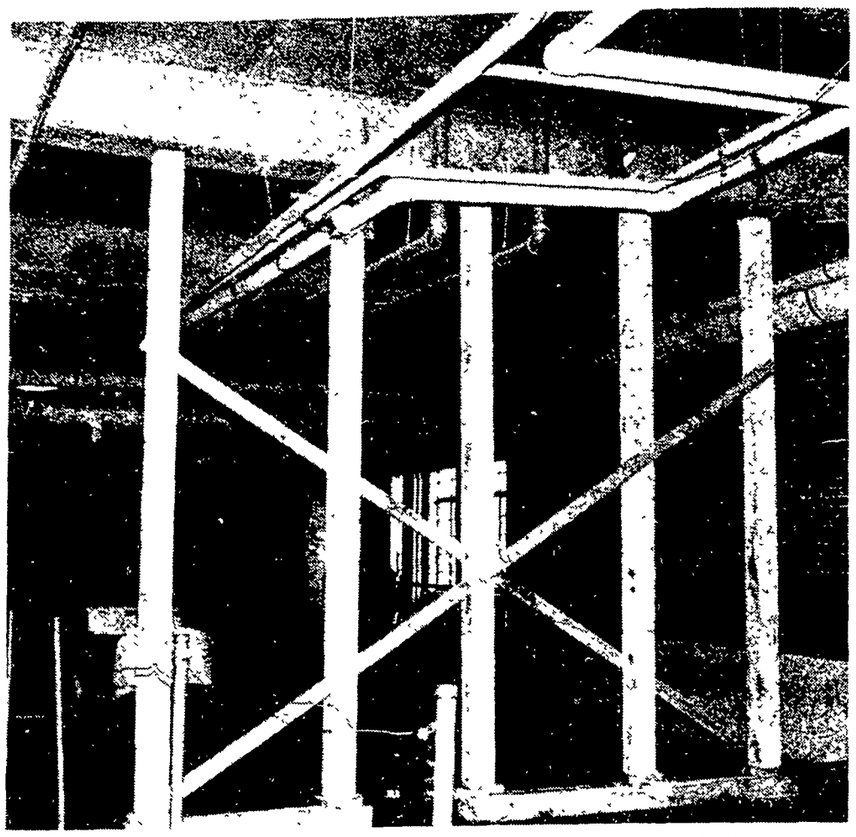
According to Smith, on Sunday the snow came from the east and drifted to the western side of the roof, which added larger than normal loads of snow on the western side.

Due to heating from the interior of the building, the snow on the underside of the huge piles melted, which caused the accumulation to slide against the parapet wall. This weight broke the wall and dumped a 225 foot section of brick and mortor into the newly constructed building sections below.

Smith added that the flashing – sheets of metal used to weatherproof the joints or edges of a roof – had deteriorated over the years and that water had soaked into the cavity of the masonry and weakened the parapet wall.

He also pointed out that "somebody had been negligent before I got here. There was considerable damage done to the building prior to the authorization of our present project. If that project hadn't been started on the Farm Show buildings, there would have been more incidents like this."

Although there was no damage done to the large arena, the extent of the damage included the total destruction of the roof of the newly built photo room, the livestock offices, and damaged the roof over the ramp from the snack bar to the lower level.



The ceiling beam of this passageway in the Farm Show building was cracked, demanding wooden support structures beneath it.

Both the photo room and the roof the new livestock tunnel had been part of the 5.6 million dollar project which had been started in the past year.

Although at the present time Smith can't put an exact figure on how much damage was done, he estimates that the amount will be in excess of a quarter million dollars and could run as high as half a million.

The work 'o reconstruct the roofs and other damage

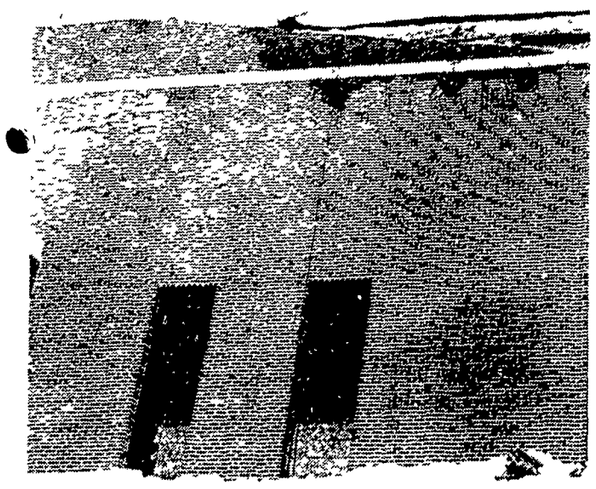
Snow fells Farm Show

(Continued from Page 20)

will be done this Summer as part of the ongoing renovation.

He doesn't expect that the loss of the livestock offices will cause much delay of livestock shows, since no major agriculture show is planned until August. By that time the reconstruction should be done. Fortunately, these livestock offices are only used during the livestock shows.



The parapet wall, which rises about four feet above the eaves of the Farm Show building roof around the large arena, broke from the weight of snow and ice last Sunday, and came crashing down on the newly constructed sections below.

Crops suffer

(Continued from Page 1)

The blanket of snow which has covered the area has proved to be a problem. It has helped to knock down what crops were standing and has made manure handling much more difficult, as one area feedlot operator explained. He has had to put manure on top of his snow-covered fields but didn't like to do it at all, for several reasons.

When spreading manure is a must, most area farmers said they have tried to put it in places where it has little chance to run off and in fields which are away from water supplies.

They value the manure for it's fertility and don't want to lose it, nor do they want to get in trouble with local residents for pollution, etc., compounding the problem of where to go with it.

Another area livestock producer said his manure was frozen, making walking difficult for his cattle, and he couldn't do anything with it until it thaws. This freezing problem has also concerned several dairymen who can't let their cows out to exercise because it is too slippery.

The snow and ice which has plagued the area at times has also made hauling hay more difficult, has caused some people problems with electrical failures, and will probably show up again in the Spring in the form of volunteer corn.

The freezing and thawing experienced earlier this season when the temperatures kept changing also concerned farmers. The sudden change from cold to warm weather caused a noticeable decrease in feed consumption for several farmers. Others felt that the sudden change to warmer weather caused more of their cattle to get sick and made it harder to keep them dry while the humidity was so high.

While comparing the cold Winter of last year to the problems faced by this Winter one farmer was noted to say that he could put up with a few frozen pipes better than too much water.

Another questin facing farmers is the effect this Winter will have on their wheat crops or alfalfa stands. Haldeman told **Lancaster Farming** that he felt it was too early to tell and he would be able to judge better by March. While most producers feel the wheat is in good shape so far, some are concerned that the ice covering their stands could have caused damage pulling it out or by suffocating it. Snow is no problem for wheat but ice is no good for it.

Cattle future

(Continued from Page1)

ternational money markets and the activity of the stock market. Moore emphasizes that these factors can affect farm prices along with agriculturally related factors such as: farm income, Russian grain purchases, grain stocks, the farm strike, the 1977 Farm Bill, weather, the supply of competing meats, and cattle cycle changes.

Although the new Farm Bill has been on the books for several months, Moore points out that its effects aren't really known yet. One thing that is definitely known is that farm income has dropped from a peak of 29.5 billion dollars in 1973 to around $20 billion last year.

New records in corn and soybean production will hold down feed costs, Moore predicts. He estimates that 1.2 billion bushels of corn will be carried over to the Fall of this year, and nearly as many bushels of wheat will be in the bins by the time new wheat harvest begins.

Farmers' intentions to plant two per cent less corn and eight per cent more soybeans aren't likely to help the situation. Summing it up, Moore says feed supplies will be abundant, prices will be cheap, demand will be excellent, and carryovers will be too much.

The average price paid at Lancaster for choice cattle last year was $41.85. For 1978 he predicts an average price of $44. The audience looks forward to an average price of $44.50 for the same kind of cattle, Moore determined.

Cattle numbers have been dropping steadily since 1975 and are now 10 to 11 per cent below what they were then. Things should look better for cattlemen on just that basis alone. Fed beef marketings for this year are expected to be about 66.3 per cent, up about four to six per cent from the previous year. Non-fed beef marketings are likely to decline as much as 15 to 20 per cent.

All this is good news to cattlemen who have weathered the ups and downs of previous years.

Stockyard figures gathered by Moore show that average weights of marketed cattle are down 12 pounds per dressed carcass. It's a trend which has been going on for six weeks and the significance of it is that it amounts to the equivalent of 15,000 fewer cattle having gone to market.

Moore sees April as the low point of this marketing year, pegging prices at between $42 and $43 per hundredweight for choice cattle.

Take boredom out of Winter landscapes

Tree silhouettes add a touch of glamour to a stark Winter landscape.

DOVER, Del. -- If you think all trees look alike in Winter, better look again Trees dominate the landscape now just as they do in other seasons And in Winter they stand out stark and bare, their silhouettes, branch patterns, and bark as individual as their Summer leaves.

University of Delaware Extension horticulturist Dr. Charles Dunham says once you know what to look for, the differences between different kinds of trees are obvious, even from the window of a speeding car. With a little practice you can easily learn to recognize them at a distance in Winter.

Some trees are more outstanding in the Winter landscape than others. One that almost everyone recognizes is the paper birch. This is a favorite tree in many home plantings, largely because of its appearance at this time of year

The most striking feature of the birch is the chalky white bark along its main trunk. Closer inspection will reveal fine twiggy branches that rise straight up towards the top of the tree. These dark brown branches contrast sharply with the white trunk and made a pleasing pattern against the sky. Near the base of the tree, branches become more horizontal and some curve down towards the ground with graceful effect.

Among trees common to the eastern growing area are three maples-the red or swamp maple, the sugar maple, and the Norway maple. Many people have no trouble sorting out the three kinds in the glory of their Fall foliage. Once you learn their characteristic shapes, you'll also be able to tell them apart at a glance by their Winter skeletons, points out the horticulturist.

At maturity the outline of the swamp maple is wide-spreading at the top and narrow at the bottom. By contrast, the silhouette of the sugar maple is egg shape, with the small end of the egg up. And the Norway maple is oval or rounded. In like manner, other deciduous trees can be identified by their shape alone.

Choosing plants for their shape and other Winter characteristics can add interest to the home landscape, says Dunham. Among smaller trees with good Winter attributes are the dogwoods, stewartias, cherries and ironwood.

Interest in flowering dogwood comes from its branching habit, Winter buds and bark, as well as from its form. The Chinese dogwood has all these features, plus an interesting rough brown and cream bark.

The stewartias all have peeling bark with red-brown creamy patches, and sharp-angled twiggy branches. Cherries are attractive because of their rich, red-brown barks, while the ironwood has a picturesque form, with sinuous limbs and twiggy small branches. Another medium-sized tree with good Winter interest is the Chinese elm, because of its colorful peeling bark.

Now is a good time to look at your Winter landscape and make notes of needed changes. Spring planting time will be here soon—as early as March or April. The most interesting Winter landscapes include both deciduous and evergreen species. A good mixture for year round effect is 40 per cent evergreen and 60 per cent deciduous trees.

Now is the time

(Continued from Page 10)

The large clear-span roofs need special re-enforcing in order to hold the weight. Water weighs 62.5 pounds per cubic foot; wet snow could weigh around 50 pounds per cubic foot; these figures will give some idea of the weight that should be considered Don't take chances; suggest the roof be built to stand the maximum weight stress.

TO REDUCE FEED WASTE

Most farmers are struggling to recover their cost of producing the farm product. Careful management is a very important item in any farm operation. The loss of high-priced feed and hay is an item in some livestock operations. The feeders are kept too full, or have holes that allows the grain to fall out and be wasted. Rodents, such as rats and mice, are very wasteful and should be eliminated. We urge that all farmers check on their feeding practices to be sure that every pound of grain or hay is being consumed by the animals. Grain or hay tramped into the manure pack is wasteful and costly. Don't permit it to happen on your farm.

Farm trucking

Continued from Page 1

Russell Hollinger, a driver with 45 years of experience, has never seen so much water in the country as what he saw during the middle of his weeks. He hauls eggs for the R.W. Sauder firm of Lititz.

Of all the commodities to be moved from farms, milk is probably the most crucial. Jim Sumner, speaking for Inter-State Milk Producers, said transportation went remarkably well considering the conditions farmers and haulers had to put up with. Most farm lanes were cleared, he remarked, adding that the dairymen are to be commended for thier cooperation.

Ted Sheaffer, manager for the John S. Ewell trucking firm in East Earl, lancaster County, told **Lancaster Farming** that although his drivers experienced numerous problems, the flow of goods wasn't hampered significantly. The Ewell firm hauls milk and dairy products throughout Pennsylvania and neighboring states.

Sheaffer did acknowledge that a few farmers could not get their milk picked up due to "unfortunate circumstances." With roads not being plowed, some drivers couldn't get to their patrons on time before dairymen ran out of storage space for their milk.

One thing a farmer should be very much aware of – and most are – is that drivers are instructed to not drive their rigs into any situation which they believe will cause them to become stuck. Drivers will almost always do all they can to make a pick-up or delivery, but they are not to jeopardize their own safety or the value of their machines and products.

To give an example of how just one bad situation can cause a monumental delay, Sheaffer cited the case of one of his trucks being stuck in snow and ice for 18 hours last week. That could very well mean the difference between a farmer getting his milk picked up on time or having to let it run down the drain.

The word to truck drivers is that if a farmer does not have his lane plowed open, the hauler is to notify the farmer. He may be picked up at a later time then, once the lane is plowed. "Don't jeopardize the entire route for one farmer," is the way Sheaffer phrases it. Although most farmers know this and will try their

(Turn to Page 38)

Roads are now pretty well cleared of snow, but truckers still have to be on the lookout for ice and flooded areas.

Milk hauler Ronald Brown, employed by the John S. Ewell firm of East Earl, has put in some long hours during the past week in attempting to keep the milk moving from the farm to the processing plants.

For soils and crops needing more Potash:

new UNIPEL® 21-7-14 fertilizer

U.S.A.* Super-Star.

It meets the changing needs of many Midwest soils for a higher ratio of Potash to Phosphate to maintain a favorable plant-nutrient balance for top grain and forage production.

Pelleted Unipel 21-7-14 is an ideal fertilizer for the grower who wants to use a Unipel Single Application plowdown of a complete fertilizer on corn ground, Fall or Spring. Especially good for corn in Potash-deficient soils, for areas and soils growing corn for silage, and for corn/soybean rotations.

Let's talk about it Come in and see us soon.

At 62nd Extension banquet

Adams County farm family honored

McSHERRYSTOWN – Mr. and Mrs. Wade H. Brown, Littlestown R3, received the "award for leadership" presented at the 62nd annual meeting of the Adams County Agricultural and Home Economics Extension Service held Monday evening at the McSherrystown Fire Hall.

Nearly 350 people attended the annual meeting which was postponed from last Thursday night because of the snow. Dr. John Oswald, president of The Pennsylvania State University, had been scheduled to speak, and indeed made the trip to McSherrystown through the inclement weather. However, he was unable to return for the Monday meeting.

Adams County Agricultural Agent Tom Piper congratulates the county's outstanding farm family, Mr. and Mrs. Wade Brown.

In making the presentation to the Browns, County Agent Thomas Piper said they were selected because of their service "to agriculture and to their fellow man." They have been farming 128 acres in southern Adams County since 1938, on the farm where Wade was born and raised.

Piper said the leadership award was established in 1973 to recognize individuals who have served their community, provided leadership in Extension programs, participated in agriculturally related organizations and showed leadership in church and other civic organizations. Piper said Brown first began taking Extension courses in 1935, before he went to farming, and "He's always been a loyal supporter and excellent cooperator with Extension personnel and programs."

When the Browns started farming, they began with four horses, a prized John Deere tractor and four mixed breed cows. In 1941 when they purchased the farm they began adding purebred Holstein cows, and in 1944 Brown joined the Dairy Herd Improvement Association.

Involvment in other organizations followed. Brown was a charter member of the Adams County Holstein Association and served as its president. He has served as treasurer and president of the D.H.I.A.: was vice president of the Littlestown local of Eastern Milk Producers; was a director of Southern States Cooperative; and is a member of Interstate Milk Producers Cooperative and the Pennsylvania Farmers Association.

He also helped organize Adams Electric Cooperative by signing up members in its formative years. He was a school director, a tax collector, township auditor and a committeeman. He is a member of the International Order of Oddfellows Lodge.

Last year two sons, Marvin and Timothy, purchased the herd and equipment and the herd now numbers 160 head, with 75 in milk. When the Browns first milked cows, their milk was shipped to Lancaster Milk Company, a forerunner of Penn Dairies to which their present milk is shipped. Marvin and Timothy now rent an additional 200 acres.

The entire Brown family has been active in Extension programs, with each of the five children involved in 4-H. In addition to Marvin and Timothy, there is Mrs. Richard Mummert, Shrewbury; Ronald, Mt. Wolf, and Mrs. N. Alan Bair, Lancaster.

Mrs. Brown was a 4-H leader for 18 years and has been an active member of the homemakers groups for 28 years. She served on the Adams County 4-H Development committee and serves on the local election board.

The Browns are active members of St. Mary's United Church of Christ in Silver Run, Md.

Following the presentation, Brown said, "I am proud to receive this, and I am proud of my whole family." He added that he has enjoyed his involvement in Extension work over the years.

Larry Yager, area marketing agent, filled in as speaker for Dr. Oswald. Yager has just returned from 3½ years on San Andros Island participating in the Bahamas Agricultural Research, Training and Development program sponsored jointly by the Agency for International Development and the Bahamian government. Penn State carried out the work of the project. Yager showed slides to illustrate the program.

"The purpose of the project,' Hager explained, "is to increase food self-sufficiency for the Bahamians since imports account for 85 per cent of all the food consumed. The goal was to develop a commercial agriculture sector based on family type agriculture."

Two thousand acres were set aside on the island of San Andros, the largest of the Bahamian chain. Yager noted the high cost of production caused by the need to import many of the needs, including fertilizer at a cost of $40-45 per ton. With the coral-based land having a ph of 7.9 to 8, a lot of work is necessary to make it productive.

Yager said the program there is patterned after Extension guidelines, with a research station using applied research on the pilot farms which were established. Farmers to work the farms were trained at specially conducted classes, and selected from the most promising candidates.

Part of Yager's work during his term in the Bahamas was to serve as manager of a cooperative whose goal is to supply feed, seed, fertilizer and chemicals to its members as well as to provide agricultural equipment which is too expensive for farmers to own individually. The cooperative also plans to market some of the produce grown on the pilot farms.

Marian Deppen, assistant director of Extension, brought greetings from the University, congratulating Adams County for its contributions. He noted that the late passing of appropriations by the Legislature has caused serious problems for the University and the Extension Service and will result in the cutting back of some positions within the service.

Using slides, Adams County Agent John Shwartz discussed the work of the

Snow damage reported in Lancaster County

Traffic slipped and slid up and down East Main Street, Lititz

LITITZ —— Heavy snowfall in the **Lancaster Farming** area caused damage to several farm buildings. In Lancaster County, reports included the partial collapse of two roofs in the Pennryn-Elm area last weekend, one over a horse barn and riding arena, the other covering a highrise chicken house.

Heavy snow caused the partial collapse of two roofs in the Penryn-Elm area last weekend, one over a horse barn and riding arena, the other on a high-rise chicken house.

On Tuesday, work was already started by contractors to pull up the roof over the barn and arena at Lower Hopewell Horse Center, owned by Mr. and Mrs. John Farrington, Speedwell Forge Road, Lititz.

Owners of the other damaged property, Ralph Myer & Sons, Airy Hill Road, Manheim R5, are going to use a crane to try to lift the roof over the chicken house, but are uncertain if this will succeed.

The damage at the Farrington riding arena was discovered after lunch time last Sunday. Mrs. Farrington said the family had been working in the arena that morning, and speculates the collapse must have occurred about noon.

She said that neighbors and members of the Brickerville Fire Company helped shovel snow off the roof for about three hours that day.

The roof went down about four feet, pushing back a wall of the arena in the section where it joins the barn, Mrs. Farrington said.

Nineteen horses are kept in the barn, including some boarded there by other owners. Mrs. Farrington said her husband and daughter, 11-year old Alida, got the horses out of the barn immediately.

She said a second section of roof, this part over the barn, collapsed while Alida was still inside. However, it was stopped by a haystack and the girl was frightened but not injured, she said.

Mrs. Farrington said they are now able to put the horses back in the barn at night.

At the Ralph Myer chicken farm at Elm, the roof over a 57,000 bird chicken house collapsed and came to rest on the top tier of one of the decks of cages, caught there by wooded trusses that broke.

An uneven snow load on the roof appears to be the cause of the collapse, Myer's son said. He said the collapse occured sometime during the night Friday a week ago and was discovered early Saturday morning.

Only about two dozen chickens were killed, those in the cages crushed by the trusses, he said.

He said the birds on the top tier of one deck were pulled out, and the other birds were not affected by the collapse. He said the equipment in the chicken house is working all right.

Penryn Fire Company shoveled snow off the roof, and also took most of the snow off the roof of another chicken house, that contains 33,000 birds.

Alfalfa's values being rediscovered

NEWARK, Del. — Alfalfa has gained quite a bit of attention in the last couple of years as a cash crop, and Delaware Extension crops specialist Frank Webb thinks the comeback is well justified.

Once a popular forage for livestock feed, alfalfa dropped out of use in the early 60's for several reasons, says Webb. The crop was troubled with anthracnose—a fungus disease for which there is no cure; it was frequently devoured by alfalfa weevils; and it also suffered from competition with other crops.

The appearance of high-yielding corn silage hybrids was one of the things that edged it out. Though low in protein compared to alfalfa, corn silage was high in energy and the protein it lacked was easy to supply with soybean meal, which was cheap and abundant back then.

The alfalfa weevil became a problem when several insecticide farmers had relied on for its control lost their registration. For a while the pest was rampant, but in the mid 1960's, entomologists began to bring this particular problem under control through widescale releases of a parasitic insect. For the past few years, at least in some parts of the state, this parasite appears to have held alfalfa weevil populations below the economic injury level. And where the insect does threaten greater injury, there are now a number of effective chemicals labeled for its control.

At the same time, says Webb, work on the pathology end of plant breeding revealed an anthracnose resistance factor that could be bred into existing varieties of alfalfa to protect the crop from this highly destructive disease. Several of these resistant varieties are now on the market, and more are in the process of development.

With these major production problems solved, alfalfa has begun to make a comeback. Today the crop is considered the best forage legume that can be grown in this area. It can be used for hay, for haylage or even for pasture, if carefully managed.

More dairymen are storing alfalfa as haylage, and there's a growing demand for alfalfa or alfalfa-grass hay mixtures among both horse and cattle owners. At prices of between $100-$140 a ton, this makes it a very attractive cash crop, points out the specialist, who notes that five ton yields per acre are not unusual, in the hands of a good farmer. At five tons per acre, alfalfa produces 50 per cent more protein than a 40 bushel crop of soybeans.

There's another good reason for growing alfalfa these days. This is its drought tolerance. "Throughout lower Delaware, alfalfa has proven extremely drought tolerant," says Webb. "It's a deep-rooted legume and can withstand droughty weather better than any other crop we grow."

In an extremely dry year, alfalfa will give a better dry matter return per acre than either corn or soybeans grown for silage. Also, from the standpoint of cost, maintaining an established stand of alfalfa is much more desirable than establishing a crop of corn for this purpose, especially in a dry year.

Something that's making its use as a fall hay crop much more appealing than it was ten years ago is the development of mechanized hay-handling equipment. One man can now handle the whole job, with the machines that are available—cutting, baling, loading and storing the crop singlehandedly.

Anyone who's interested in making a planting of alfalfa this spring should start right now to make the proper preparations. These will include getting a complete soil analysis. The desirable pH level for this crop in most areas is 7.0. It also requires good fertility levels.

Alfalfa seed is limited and prices are at an all time high, so order your seed as soon as possible, and be sure it's anthracnose resistant. Either Saranic AR or Arc are among the varieties recommended by Webb. Good early weed control is also important, with a preplant incorporated treatment of either Eptam, Balan or Tolban.

With the right preparations, you should be on the way to a good alfalfa crop. And a good stand can be profitable for 4-6 years, with proper yearly weed control and fertilization. It's no wonder that people are starting to grow alfalfa again.

Farm Calendar

Continued from Page 10

Tuesday, Jan. 31

Dairy management meeting with Don Ace at the Lancaster Farm and Home Center, 7:30 p.m.

State Horticultural meetings begin at the Hershey Convention Center, Hershey. This combination meeting features the state fruit grower, vegetable growers and wine grape conference plus a trade show. The program continues through Feb. 2.

Garden Spot Young Farmers meeting on estate planning, 7:45 at the high school.

Ephrata Area Young Farmers meeting, "energy conservation" 7:45 p.m. at the high school.

Hunterdon County, New Jersey, holds meeting on energy conservation at the Extension Center.

Wednesday, Feb. 1

York County 4-H County Council meeting.

Hunterdon County, N.J. board of agriculture meets, at the Extension Center, 8 p.m.

Thursday, Feb. 2

Delmarva Corn and Soybean meeting in Ocean City, Md. Ocean City Convention Hall, 8:30 a.m. to 3:30 p.m.

DHIA workshops for Lancaster County. Contact the Extension Service for details. the First will be held at the Intercourse Fire Hall, 12:30 p.m. to 3 p.m.; the second (same program) at 7:30 p.m. in the Farm and Home Center.

Red Rose Beef and Sheep Club banquet, 6:30 p.m. at the Farm and Home Center.

Pesticide course at Solance High School, 7:30 p.m. to 9 p.m.

Open House at C.B. Hoober's, Intercourse, featuring speaker on agricultural leasing, farm finances. Lunch at 11:45.

Friday, Feb. 3

York County 4-H Family Movie Night at the 4-H Center, 7:30 to 9:30 p.m. Showing the "Ugly Dachshund."

Saturday, Feb. 4

Ephrata Area Young Farmers annual banquet, Mt. Airy Fire Hall 6:45 p.m.

Feb. lung test scheduled

LANCASTER - The monthly testing program, sponsored by the Lancaster County Lung Association, will be conducted at the Association office, 630 Janet Avenue, Lancaster, on Tuesday, February 7, 1978.

Tuberculin testing will be done from 10 a.m. to noon and 1 to 5 p.m. Persons having this test will return for a report on Thursday, February 9, 1978.

Diabetes screening, conducted by the Lancaster County Diabetes Association, will be done from 10 to noon and 1 to 3 p.m. Cost is $1.00. A normal meal should be eaten two hours before having the test.

The American Heart Association will be checking blood pressure from 10 a.m. to noon and 1 to 5 p.m.

Free educational materials are available in the Lancaster County Lung Association office concerning lung diseases and smoking.

Thoughts in Passing

By William C. Miller Jr.
Student Teacher of Ag
Lancaster County
AVTS - Willow Street

Now is the time to make the necessary preparations for optimum results of a vegetable garden.

Begin by choosing a good site. Sunshine is needed most of the day by practically all vegetable crops. The soil should be deep, crumbly, and rich in organic matter. The area should be well-drained and fairly level. It is a good idea to locate it close to a water source for those dry spells.

Once a site is chosen, a plan should be made to insure maximum production. Draw a plan to scale that outlines the size of the garden, the kinds and varieties of vegetables to be planted, their location and spacing, the amounts to be grown, and the date each crop is to be planted.

Succession cropping should be practiced to extend your gardening season. This is accomplished by following early crops such as peas, green onions, lettuce, and spinach, with crops that can be planted at a later date such as celery, late beets, carrots, and late cabbage.

The Cooperative Extension Service office is able to provide you with specific information regarding your garden planning. They also have a soil sample kit so that you can test your soil and make the proper adjustments. This is important to insure maximum production from your vegetable crops.

If you plan to grow your seedlings, follow these general guidelines:

Plant your seeds in a weed and disease free medium. Your local garden center will have various mixtures and will be able to aid you in selecting the proper one.

Sow the seed according to the directions on the package. After seeding, water the boxes or flats by placing them in a pan of water until the soil appears wet on the surface. Place the containers in a warm area out of the direct sunlight. A plastic film or glass plate cover over the flat will help reduce drying until the seedlings emerge.

Two weeks after the plants emerge transplant the seedlings so that they are two inches apart each way. Water should be applied as necessary to prevent stunting of growth.

Plants weakened by transplanting such as melons, squash, and cucumbers should be started in peat pots or pellets. This will avoid root disturbance when planting into the garden.

Follow these general guidelines and save money while enjoying the recreation and eating pleasures a home garden provides.

Apple production up

HARRISBURG – Pennsylvania's 1977 commercial apple production is estimated at 430 million pounds, up 19 per cent from the 1976 crop of 360 million pounds, according to the Pennsylvania Crop Reporting Service. The crop is 20 per cent below the record production level, 550 million pounds.

The 1977 apple crop converts to a total of 10,238,000 boxes of 42 pounds each.

After a small 1976 crop, York Imperial production once again led all Pennsylvania apple varieties. Total production of York Imperials during 1977 amounted to 107.0 million pounds, 45 per cent above the 1976 crop of 73.8 million pounds. Pennsylvania also retained first place in the production of York Imperials, with 40 per cent of the U.S. total. Pennsylvania is also the leading producer of Stayman apples.

Production of all apple varieties in Pennsylvania were above the 1976 crop levels.

Following York Imperials which accounted for 24.9 per cent of the state apple total were Golden Delicious, 19.8 per cent; Red Delicious, 15.7 per cent; Stayman, 13.6 per cent; Rome Beauty, 13.3 per cent; Jonathan, 3.6 per cent; McIntosh, 3.5 per cent; Cortland, 1.7 per cent; and other varieties, 3.9 per cent of the total Pennsylvania production.

Utilized production from the nation's 1977 commercial apple crop totaled 6.7 billion pounds, a five per cent increase from 1976, but six per cent below the 1975 crop figures. In the East, 2.7 billion pounds were utilized, 15 per cent above a year earlier.

York Imperials made the largest gains from 1976 with 40 per cent more produced. Other varieties showing large increases were: Northern Spy and EI Greening, each up 26 per cent; McIntosh, up 25 per cent; Stayman, up 19 per cent; Jonathan, up 16 per cent; and Cortland, up 15 per cent. Delicious apples registered a four per cent decline while Gravensteins. Rome Beauties, Winesaps and Yellow Newtons reflected one to two per cent reductions.

Red Delicious remained the nation's leading variety, at 34 per cent of the total U.S. crop. Other leading varieties as a per cent of the total were Golden Delicious, 18 per cent; McIntosh, 10 per cent; Rome Beauty, seven per cent; Jonathan, five per cent; and York Imperial, four per cent of the total production.

Pa. potato storage down

HARRISBURG – Pennsylvania potatoes held in storage by growers, local dealers and processors on January 1 are estimated at 3,400,000 cwt., according to the Pennsylvania Crop Reporting Service. The stocks are 13 per cent less than the January 1, 1977 figures.

Stock of potatoes held in storage at this time represent 53 per cent of the State's revised fall potato production estimate. Last year, January 1 stocks represented 55 per cent of the fall 1976 production. Pennsylvania fall potato production is now estimated at 6,375,000 cwt., 11 per cent below the 1976 levels.

Pennsylvania farmers had planted 25,500 acres of potatoes with a yield estimated at 250 cwt. per acre.

Stocks of potatoes for all uses held in storage in U.S. fall production areas totaled 176.4 million cwt. on January 1978, one per cent above the 174.8 million cwt. on hand a year earlier.

Stocks in the eight eastern states on January 1 totaled 29.1 million cwt., up seven per cent from the 27.1 million cwt. on hand a year ago.

have a nice weekend...

Hatfield buys 33 Farm Show hogs

The grand champion hog of the recent Pennsylvania Farm Show was one of 33 purchased by Hatfield Quality Meats of Hatfield. Jerry Clemens, of the livestock procurement division for Hatfield, paid $19.50 per pound for the 210 pounder, which was exhibited by 10-year old Seth Gruber of Lehigh County. Clemens, left, said that by participating in the Farm Show and purchasing hogs, Hatfield Meats encourages youth to continue their interest in raising livestock.

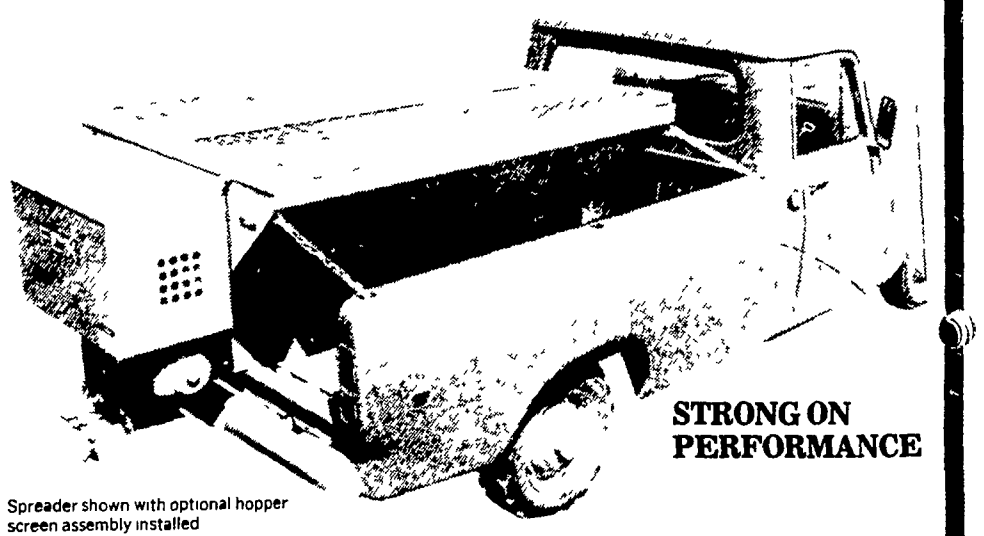
FOX 0539-07
Material Spreader
For Pick-up Trucks

NEW FOX COMPACT MODEL SPREADER
FOR MOUNTING ON SMALL TRUCKS



Spreader shown with optional hopper screen assembly installed

STRONG ON
PERFORMANCE

The Fox Model 0539-07 is especially designed for mounting on pick-up, flat bed or dump trucks. Mounting, using the hold-downs at all four corners, is quick and easy. The spreader is a self-contained unit powered by a 7 H.P. air-cooled 4-cycle gasoline engine with heavy duty centrifugal clutch, electric starter alternator

THIS COMPACT MODEL IS A MULTI-PURPOSE SPREADER
PARTICULARLY SUITED FOR:

• ICE CONTROL • FERTILIZER • DUST CONTROL
• BROADCAST SEEDING • ETC.

It will spread material (sand, salt, cinders, lime, etc) in widths from 4 to 40 feet depending on weight and kind of material

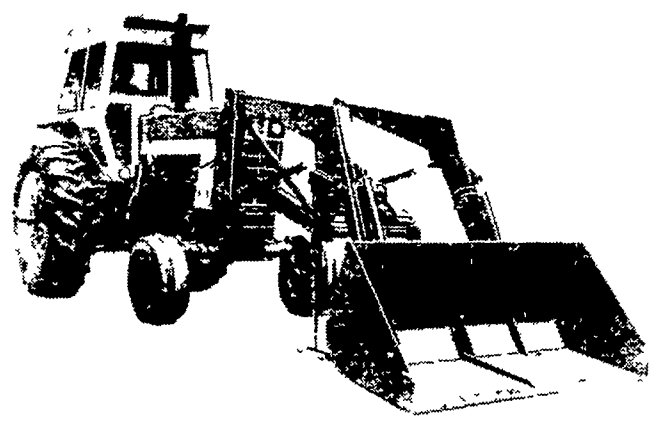
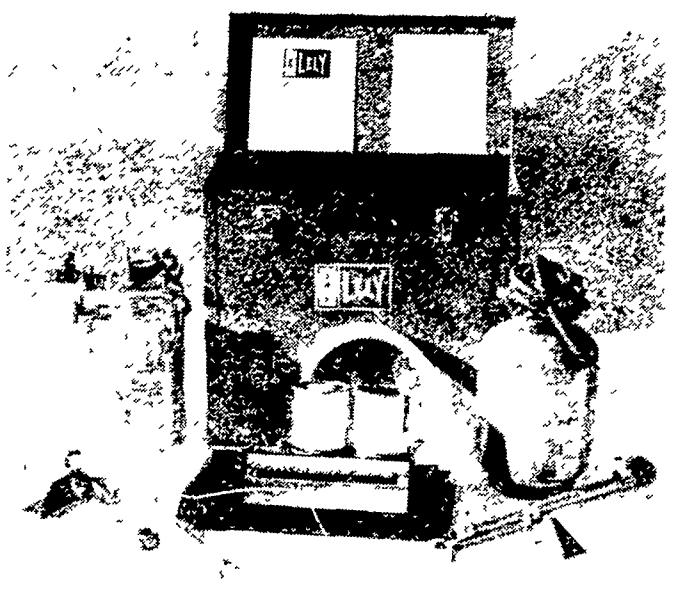
WHAT'S NEW



BUSH HOG LOADER

Capable of being mounted by one man in under four minutes after original installation, the new Bush Hog SL-70 quick attach front-end loader fits a wide variety of tractors. It's quick-attach/detach mid-mount frame easily adapts to fit most tractors of 65 hp and more.

The SL-70's cylinders feature a special "V" type piston packing that provides three sealing surfaces around the piston to withstand minor contaminants, constant use, and extreme heat and cold. Rust resistant, chrome-plated, high-tensile steel cylinder rods give 3,500 lbs. lifting power and 5,000 lbs. breakaway strength. The loader accepts a wide range of attachments.



SPRAY TESTING KIT

Until now, in spite of all their good qualities, you could not tell whether your herbicides were going to work until your crop emerged. This was true even for the more reliable and, more reliable and, generally, less expensive pre-plant incorporated herbicides which became more popular during dry 1977.

Someone has finally come up with a way to determine whether the method of incorporation will be effective. The source of this method is a relatively young organization, Lely; manufacturer of the unique Roterra, a secondary tillage tool which lends itself ideally to chemical incorporation and seedbed preparation in the same trip.

The method utilized is spraying, in the usual manner, a fluorescent dry from a spray boom and evaluating the uniformity of distribution under ultra-violet light. In this way one can determine, before it's too late, whether the herbidide will be incorporated effectively and whether it has an opportunity to perform to expectations. The test can be performed without special training, with ease while using any incorporation device and in varying soil conditions.

The low-cost testing kit consits of an air tank, a pressurized spray container, fluorescent paint, blacklight with battery, sprayboom, balck vinyl, instructions and a handy container for the kit All are available from local Lely dealers or by writing to Lely, Box 1060, Wilson, N.C. 27893.

SPRAY COMMAND

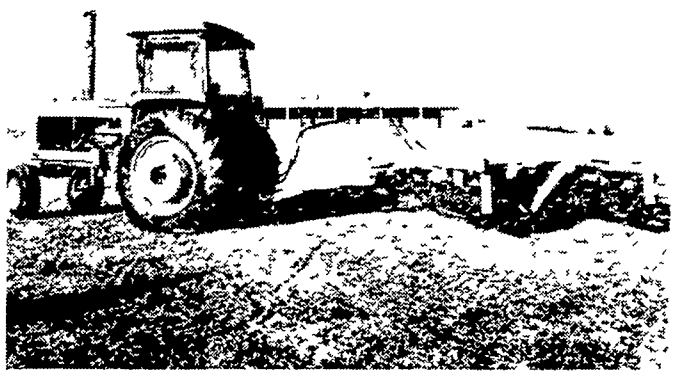
With the new Lely Spray Command, tractor operators no longer have to look at their nozzles to make sure each of them is spraying - not even when darkness, a cloud of dust or other obstacle blocks their view from the tractor seat. If a nozzle becomes plugged, a light representing that nozzle will flash. All lights will flash when the spray tanks are empty. A warning sound will also make sure the operator pays attention to the malfunction. Up to eighteen nozzles can be monitored with a Spray Command. Users of the new product will eliminate skips, costly cultivation and have an opportunity for greater yields at harvest time through better weed control.

The new Lely Spray Command also enables the operator to automatically turn the spray boom on or off, or, adjust spraying pressure from the tractor seat without hoses in the cab.

He will be able to increase his application in problem areas and reduce pressure when his soil conditions slow him down.

While Spray Command can be used in connection with tractor, disk or planter-mounted spray booms, it was originally introduced for use with a rear-mounted spray boom on a Lely-Roterra and a Lely-STIP System. Such a system enables a farmer, with his current tractor and planter, to spray, till, incorporate and plant in the same trip. Spray Command and other dependable Lely controls make a combination-trip-planting system easy to operate. By eliminating trips and planting with a system, farmers save time, money and create less compaction in problem soils.

For further information, farmers should contact the nearest Lely dealer or write LELY, Box 1060, Wilson, N.C. 27893.



STALK CHOPPERS

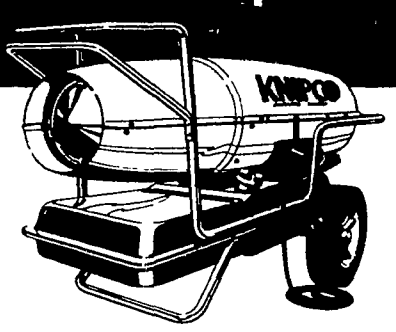
B. J. Manufacturing Co., Inc. of Dodge City, Kansas, announces the introduction of two new models to their line of Rolling Stalk Choppers.

Like the original 4 and 6 Row BJM Rolling Stalk Choppers, the new models are ground driven thereby eliminating PTO shafts, gearboxes, and drive assemblies. Available in 13½ foot and 16 foot models, the reel type cutters overlap to provide a full coverage cutting action. The 13½ foot model has five reels in front and five reels on the rear gang and will cut a full 162 inch with no skip. The 16 foot model will cut a full 195 inch with no skip. The main frame on both models is constructed of heavy wall 4 inch by 4 inch tubing.

The recommended operating speed of eight to 12 mph combined with the weight of the chopper pulverizes stalks and knocks down row ridges of corn, sorghum, soybeans and cotton. In many soils it will eliminate one discing operation. An additional 2000 pounds of weight can be added with optional weight pans.

Additional information is available by contacting B. J. Manufacturing Co., Inc., P. O. Box 370, Dodge City, Kansas 67801, (316) 277-8173.

HEAT WAVE
Low-cost, portable warmth from Knipco.



Knipco heaters warm barns, workshops, garages, or any other well ventilated unheated work area. Knipco has a full line of portable, oil-fired heaters ranging from 30,000 to 150,000 BTU's. All use low-cost kerosene or #1 fuel oil. Just plug into any standard grounded electrical outlet for instant heat.

For a free demonstration, see your Knipco dealer today.

Debi Black likes the black-faced Suffolk sheep

By KENDACE BORRY

HARRISBURG — For those people who saw the sheep shows up at the Pa. State Farm Show, they may have noticed a sprightly young lady in the ring handing out ribbons and awarding trophies in the Suffolk classes. The 19-year-old miss from Washington County, Pa., is the 1978 National Suffolk queen, and was helping at the show as part of her duties while serving as royalty.

Debi Black, Avella R2, is a Penn State student majoring in home economics. She took time out of her studies to travel to the North American Livestock Exposition, held in Kentucky last November, where she competed with 13 other girls for her title. Contestants came from many states including California, Nebraska, and Texas.

Each state queen was interviewed individually and judged on her poise, appearance, and her ability to communicate to people about the Suffolk breed of sheep.

Then, three finalists were selected. Each of these girls gave a short speech about some aspect of the Suffolk breed at a banquet held by the National Suffolk Sheep Association, which was attended by over 300 people. Debi's speech concerned expanding Suffolk flocks by crossbreeding in order to produce a more marketable animal.

When not working as Suffolk queen or busy studying, Deb helps on a 130 acre farm where she lives with her parents, Mr and Mrs. William Black, who produce purebred Sulfolks, purebred Columbias, commercial grade sheep, feeder calves, and also raise a variety of crops

An active 4-H'er for the past ten yers, Deb hopes to be a leader in the clubs in the future as well as work as a home economist. She completed projects in dairy, sewing, cooking, and swine, as well in sheep. As she reflected back on her 4-H career, she believed that 4-H helped her grow to love and respect not only people but also animals, a quality she feels is necessary for every individual to have.

Some of her duties as National Suffolk queen include attending the Mid-West Stud Ram Sale to be held at Sedalia, Missouria, and the Eastern Stud Ram Show and Sale at Staunton, Virginia. She will also preside at the North American Livestock Exposition in Kentucky next November where her successor will be chosen.

Besides attending Suffolk shows and sales, she hopes to give demonstrations and presentations about sheep to school children, consumer groups, and Suffolk breeders. She stated that the Suffolk breed has a lot to offer people if the advantages would just be considered.

The National Suffolk Queen stated that she can be reached at her home address about promotional events concerning Suffolks, and she hoped that groups interested would contact her.

Both looking proud to be seen with the other are Debi Black, Avella R2, the National Suffolk Sheep Queen, and a prize winning Suffolk sheep shown recently at the Pa. Farm Show.

USDA 'bullish on exports'

HOUSTON, Tex. – Calling USDA "bullish on exports," a department spokesman recently told farmers attending a conference on agricultural marketing that the growth potential for U.S. agricultural exports is the best in history.

Dr. Kelly M. Harrison, general sales manager for USDA, made his remarks during the conference which was held in conjunction with the 59th annual meeting of the American Farm Bureau Federation here this week.

"The U.S. can capture a sizeable share of these growth markets if we can be dependable suppliers year after year at reasonably steady (not necessarily low) prices, and if we are able to offer credit, technical assistance and customer servicing where needed," he said

Harrison further stated that in the future the world faces a food shortage "which could easily overshadow the much-talked-about energy crisis."

Citing a recent study by the International Food Policy Research Institute, Harrison said that by 1990 countries with limited import purchasing power will have food deficits of 70 to 80 million metric tons

He also said that the economic development of these countries will be a positive factor for American agricultural exports.

"We have the most sophisticated and resourceful agricultural marketing structure in the world," he stated "Terrific advances have been made in the past few decades Much has been done much more has to be done."

Harrison expressed his disappointment over the defeat of the beef referendum last year which, if passed, would have allowed the meat industry to sharply expand promotional activities

xxx

Through its leaves, a large oak tree can lose up to 3200 quarts of water into the air every day, reports Ranger Rick's Nature Magazine

The USDA official said that such checkoff programs are "the lynch pin to the superlative work by the cooperators (meat industry groups) in developing and expanding overseas markets."

Harrison repeatedly stressed the record levels of U.S. agricultural exports over the past three years and the expectation of nearing the 1977 record of $24 billion export mark in spite of low world prices due to this year's over-supply of stocks.

However, in addressing the issue of low market prices for farmers and possible solutions, the USDA official also recommended that farmers hold supplies off the market until price levels are raised.

Drought brings on switch to incorporation

Herbicide incorporation – by no means a new farming tool – is the subject of increased grower interest this year.

Reasons? For many, last season's widespread drought conditions, especially around planting time, is the key. As is well known, many thousands of acres that had been treated with surface applied herbicides were so weed infested that growers were faced with a very real threat to their yields. Without rain after application – often for fairly extended periods – these herbicides just couldn't work. Extensive salvage operations to restore effective weed management had very mixed results.

When growers lose their investment in chemical as well as risk a loss on their crop, it adds up to a potentially devastating one-two punch they can ill afford.

What's more, the weather outlook down the road continues to be uncertain, at best. Some weather specialists go so far as to indicate an increasing probability of drought. Others say, more conservatively, there is at least ample evidence that growers should not depend on the generally good weather pattern they have gotten used to over the past 15 to 18 years. They advise, further, that growers should, consider adjusting their management stratagies accordingly to minimize the affects of weather variables, particularly drought.

As a result, the particular advantage of incorporation when it comes to "weather insurance" has taken on a fresh appeal.

While the basic principles of applying preplant herbicides and incorporating them into the soil have remained pretty much the same, in recent years newer equipment and refinements in application techniques have made herbicide incorporation an even more valuable farm tool in terms of efficiency and convenience.

Basically, however, the advantages of incorporating a preplant-applied herbicide into the soil are quite evident. Most importantly you don't have to rely on rainfall to activate the herbicide – it's already positioned in the top two or three inches of soil where it can start working on weed seeds as they germinate. Weed competition for soil nutrients, moisture, and sunlight is largely eliminated and crops get off to a vigorous start and good, high-yielding stands are established. Controlling weeds early also frees up growers' time for other important jobs during the busy spring season.

Experience over the past few years has shown the tandem disc followed by a spike tooth harrow, or some other leveling device to be the most effective tool for adequately mixing the chemicals into the soil before planting. Power driven tillers are also recommended. When possible, application and incorporation should be done in the same operation. The result is a chemical barrier across the full area of the field that controls weed growth - even deep germinating weed seeds must pass through the chemical as they grow toward the surface. Most herbicide specialists recommend concentrating the chemicals in the top two or three inches of soil to avoid dilution.

Incorporation equipment and the calibrated depth and uniformity of herbicide placement – can vary considerably. As a loose rule of thumb, however, the most herbicide will be placed at about half the depth the equipment is operated: if the disc is set to operate four inches deep, most of the herbicides will be deposited in the top two inches. A second cross discing is often recommended to increase uniformity of application – especially in heavy, cloddy soils.

Tooling up for soil incorporation can be relatively simple and inexpensive. The first step is to check the adaptability of existing equipment. Smaller acreages may require only a simple spray boom fitted to a tractor or tillage tools. The spray unit can be followed by a disc and harrow for immediate incorporation.

Another workable system consists of a tank or drum sidemounted on a tractor to feed a belly boom. Discs that follow should be set to cut slightly narrower than the spray pattern. Equipment designed for smaller farms can cost as little as $100.

Larger acreages require more elaborate systems with bigger tanks, pump, and spray boom fitted to either tractor or discs. Otherwise, the grower can use one of the variety of specialized kits. These are easily assembled units and include such features as adjustable booms that can be fitted to variously sized discs and incorporation equipment, low friction chemical resistant hose, and uniformly engineered nozzles. Gandy units are used to apply granular materials.

Field experience indicates that use of a spike tooth harrow after the disc improves the mixing action in the soil. A shallow set spring tooth harrow can also be used behind the disc with good results. Plank floats or cultipackers following the discs also help mixing and smooth the seed bed for planting.

There are several other factors that can affect weed control with herbicide incorporation that should also be considered. They include different soil textures, rainfall after application, and the specific weed spectrum in the field.

For example, preplant herbicides like Sutan + and Eradicane on corn, Vernam and Treflan on soybeans, and Eptam on various crops must be incorporated immediately after application. Delay allows a breakdown or loss of active ingredient and reduces the effectiveness of the treatment. Growers usually solve this problem by applying the herbicide and incorporating from the same rig in one trip over the field.

Rainfall, is heavy after application, may leach the more soluble herbicides too deeply into the soil. Other factors like soil texture, temperature, and pH may affect performance, too. Label instructions for each herbicide should be consulted in taking account of these variables.

Weed spectrum, of course, is critical in choosing an affective herbicide or combination to do the job. Bladex and atrazine are highly effective on many of the common broadleaf problems in corn. When grassy weeds, particularly some of the newer "problem" varieties, are evident, Sutan + or Eradicane may be the choice on corn. Sutan + is also labeled for tank-mix application with atrazine or Bladex for broader spectrum control. Eradicane, generally used on corn to check tough weeds like johnsongrass, wild cane (shattercane), and quackgrass, is now registered for use as a tank mix with atrazine.

Finally, mention should be made of one of the newer, innovative techniques for incorporating herbicides - herbigation. This, of course, pertains only to irrigated crop production and as the name indicates it refers to applying herbicides directly on the crop through the irrigation system. There are various ways of doing this depending on the type of irrigation system used. Stauffer Chemical Company which introduced the herbigation concept has several herbicides EPA - registered for this use pattern. Crops on which it is currently being used successfully include corn, alfalfa, rice, sugarbeets, potatoes.

Instead of discs or other tillage equipment, incorporation is achieved as the water from the system moves the chemical into the soil.

Whatever technique is used, however, herbicide incorporation is one of the better ways to minimize the risks of weather and to help maximize herbicide effectiveness.

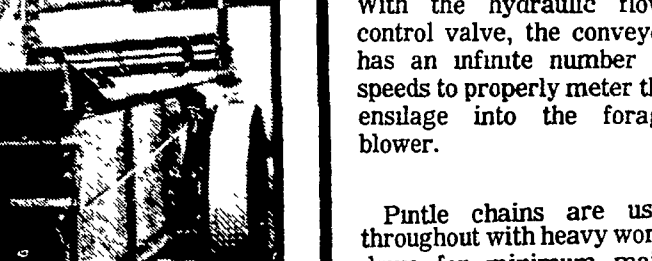
WHAT'S NEW



STATIONARY CONVEYOR

A new Fox stationary conveyor box being introduced by the Farm Equipment Division of Koehring will help reduce time spent waiting while forage wagons and trucks are being unloaded.

With the new Fox stationary conveyor, loads of silage or haylage are simply dumped on the conveyor platform. The truck or forage wagon is then free to return to the field for another load while the conveyor feeds the forage material into a blower. As a result, Fox engineers explain, farmers and ranchers may find that they will need less hauling equipment and manpower.

The large capacity Fox Stationary Conveyor Box is ideal for the farmer or rancher who hauls silage or haylage long distances and needs quicker turn-around on unloading.

It has four heavy-duty apron chains with a two speed transmission which moves material forward to the beaters and then can be shifted down to a slower speed to properly feed ensilage into the forage blower. With the hydraulic flow-control valve, the conveyor has an infinite number of speeds to properly meter the ensilage into the forage blower.

Pintle chains are used throughout with heavy worm drive for minimum maintenance, says Fox. The conveyor is designed to be driven with tractor hydraulics.

The two wheel axle and the tongue design makes it easy to handle when moving, says Fox.

The Farm Equipment Division of Koehring, headquartered in Appleton, Wis., is a major manufacturer of forage harvesting and handling equipment and tillage tools.

Messicks in farm machinery business 25 years

By KENDACE BORRY

RHEEMS – It has been 25 years since Merville Messick has gone into the farm machinery business and this year as part of their continuing growth he and his sons, Robert and Kenneth, who now form a family partnership, have moved their business to a new location. The new Messick Farm Equipment is now located at the Rheems exit off Rt. 283, between Mount Joy and Elizabethtown.

The store which officially opened Jnuary 1, 1978, fills a need to expand that the Messicks thought was necessary. They picked the spot off Rt. 283 because they liked the location, its easy access, and its closeness to their customers The facilities contain 8400 sq. ft. in the shop area and 6000 sq. ft. in the sales area.

February actually marks the 25th year that Messick has been in business. A farm boy, he claimed that he got started in the farm machinery business after being asked if he'd be interested in trying his luck. He's been selling farm equipment ever since.

Looking at the changes in farm machinery in the past quarter of a century, Messick believes farm operations have changed, in fact have had to change to survive because of the demands placed on farmers to produce more. "Consumers today are demanding more from the farmer than ever before," he noted. "Farm machinery has had to keep up with that change. Larger equipment is being bought, and our business has to be able to service the farmer faster and better in order to serve his needs."

Messick noted that the majority of his customers would probably fall into the category of dairy, poultry, or beef cattle farmers, with forage crops being the major crop grown. The most popular items he sells are tractors and minimum tillage equipment.

Today, according to the number of tractors being sold, most farmers seem to prefer an "average sized" tractor for their farm needs Messick seemed to think a tractor that pulls five-to-six plows suits the Lancaster County area best.

The new business center Mewsick now has can offer a complete line of service to the farmer, Messick explained. A dealer for Sperry New Holland an International Harvester, as well as True Value hardware, he and his sons have tried to make the facility more of a one stop store for their customers. Each of his mechanics, he noted, is factory trained, and spends at least four weeks in training per year

Another special service which the Messicks offer is a new item called the "Pro-Ag" seminar. For this, a farmer attends a special seminar, where his farm information, such as cropping data – acres, crops, equipment, labor, etc., is put on paper and fed into a computer to determine the effect different farm decisions will make on the profit margin of the farm business. This service will begin to be offered in March and already four farmers have signed up to use it.

As part of their celebration of opening the new store and celebrating their silver anniversary in business, Messick Farm Equipment is having a grand opening open house from February 15 to 18. Everyone is invited to attend and see the new store, and light refreshments will be served.

Merville Messick, owner of the business, is celebrating his 25th year in the farm equipment business.

Seen off Rt. 283, the new Messick Farm Equipment offers a complete line of farm services to the area.

Broilers up

HARRISBURG – Pennsylvania poultry production during the week ending January 14 was up nine per cent from 1977, according to the Pennsylvania Crop Reporting Service.

Broiler chick placements during the week totaled 1,862,000. The placements were about the same as the previous week. Average placements in the commonwealth during the past ten weeks were eight per cent above a year earlier.

In the 21 key poultry producing states, placements during the week were 68,010,000, one per cent above the previous week and eight per cent more than the same week in 1977.

Average placements during the past ten weeks in the 21 states were six per cent above a year ago.

Broiler-fryers slaughtered in Pennsylvania under Federal Inspection during the week ending January 4, 1978 totaled 1,470,000.

My Thoughts . . . . .

And welcome to them

By JOANNE SPAHR
Assistant Editor

It's now 8.30 in the morning and I feel like an icicle. Yesterday our cellar got flooded out leaving the dingy, gray, unheated cement area in disarray and knocking our furnace out, which has had the effect of whirling me back through time to pioneer days when people roughed it.

What else would you call wrapping yourself in a sleeping bag to watch color television? Isn't that how it used to be?

What about having to plug your electric curling iron in a receptacle in the kitchen, since that's the only room kept warm by benefit of a $25 portable space heater bought on sale at Penneys.

And, didn't all pioneers make a real game out of doing their wash, like making a mad dash into the washroom to open the lid, and running back out to the space heater. Then, taking another running gallop into the room, scooping the wash off the floor, and running out to get warm. Then, barging back in again, dropping the wash in the machine and running out, only to burst into the room one more time to turn on the machine and run out, again, to collapse before the space heater, panting from all the activity and exercise

You say they didn't have color television, space heaters, electric curling irons, or automatic washers back in the days of the pioneers?

Eat your heart out, Michael Landon.

Farm management workshops

FLEMINGTON, N.J. – Area farmers are signing up for the Cooperative Extension Service's 3-day school on farm management, reports C. G. Wettstein, Hunterdon County agricultural agent. Dealing with "The Economics of Crop Production," growers and farmers will be involved in 15 hours of study.

Sessions are scheduled for Monday, Wednesday and Friday of next week (begins on January 30), 10 a.m. to 3 p.m. in the Hunterdon Extension Center.

The opening day will include a look at the variety of inputs in a farm crop operation. Budgets will be discussed and actually determined on several crops.

Interested farmers, and hopefully, their wives are urged to participate, continues the agent. There is a $5 registration fee to cover cost of notebook, materials and beverage for lunch.

Conducting the series are Extension Service specialists from Cook College, John M. Hunter and Robert G. Latimer, and agricultural agents in Somerset and Hunterdon Counties, H. N. Repair and C. G. Wettstein.

Details on the program are available in the Extension Service offices in Hunterdon and Somerset Counties.

ASCS working to administer Farm Bill provisions

By JOANNE SPAHR

HARRISBURG -- Agricultural Stabilization and Conservation Service programs are the second best methods of attaining parity prices for commodities, says Carl L. Kaufman, state executive director for the Pennsylvania ASCS office. The best actual program, he contends, would be the establishment of a trustworthy national organization to run the parity program.

Unfortunately, however, he admits the American farmer is not inclined in this direction. Therefore, the SCS is the best alternative, in his mind.

Kaufman made these comments before a gathering of state delegates of the Pennsylvania Farmers Union who met this week to hash out the organization's stand on various policies.

The ASCS director explained some of the present programs and aims of the SCS to the 95 members who gathered to hear him speak.

"Our job is to administer the provisions of the new Farm Act," stated Kaufman. "And, we have much the same goals as the striking farmers. Instead of saying, 'Don't sell,' we say, 'don't sell **now.**' And, rather than saying, 'Don't plant,', we say, 'Don't plant as **much.**'"

Under the new policy of the Department of Agriculture, the government does not want to own grain as it has done in past years. Instead, the system is set up for the farmer to own, control, and store grain on his own farm.

"We then make loans available for the storage of the grain," explained Kaufman.

Two of the price support stabilization systems available under the new Farm Bill include immediate money programs, and purchase agreements.

Under the immediate money program, the farmer can go into the SCS office and certify as to the quality and quantity of grain he has, and get a loan on that grain. This procedure establishes a floor under the market by assuring the grain producer a set price for his crop. If he is able to market the grain at a higher price, however, he is able to do so under the program. All he need do then, is repay the loan. However, if the farmer is unable to sell above the support price, the government buys his crop.

According to Kaufman, purchase agreements had never been used in Pennsylvania prior to a year ago when he began promoting them. Now they are catching on slowly.

"This agreement serves as an excellent form of collateral if the grower wants to get a loan for something else," explained Kaufman.

During his speech he did stress that "the government is not in your life unless you want it to be." Explaining this, he pointed out that a farmer doesn't have to take part in these government programs. It's a voluntary program.

"But, if he takes part, he has to agree to cooperate," noted Kaufman. Beginning January 1, it was established that anyone who wants to be involved in the loan program has to be involved in the set aside plan as well.

In closing, Kaufman made it clear that, in his mind, the Secretary of Agriculture, being a farmer, has helped to draft a Farm Bill that is both voluntary and effective.

Dec. food basket costs down

HARRISBURG – Pennsylvania's average retail food basket cost the consumer slightly less in December than in November, acording to the monthly Food Basket Survey Report released this week by State Agriculture Secretary Kent Shelhamer.

The statewide average of 14 food products sampled in rural and urban stores was $10.75 in December, a five cent decline from November's average retail cost of $10.62. Shelhamer noted that December's survey reflected a trend of recent months with food basket costs decreasing.

"The average cost of the food basket for Pennsylvanians has been steadily on the downslide since July when the food basket hit a record high average of $10.96. But this downward trend means that farmers are getting an ever smaller share of the consumer dollar. Many of our small farmers are losing money as a result," he said.

The food basket survey is conducted by the Department of Agriculture's Bureau of Rural Affairs on a monthly basis Fourteen food items are sampled to provide an on-going indicator of food price trends. Consumer coordinators in six regions of the state visit urban and rural stores and record storebrand and namebrand prices for the same list of 14 regularly purchased agricultural commodities.

The December survey showed average food basket prices highest in the southwest region of the state where the 14 items cost an average of $10 98 Lowest prices for the food basket were found in the southeast central region of the state, a $10.22 average. Four of six regions showed declines in the food basket cost, with only two regions having higher averages during Decemer. Variations in cost ranged from a 16-cent increase in the southwest to a 34-cent drop in the southeast central section.

The difference in cost of the food basket purchased in urban versus rural stores was reported at 2.65 per cent in December. The food basket cost an average of $10.56 in urban supermarkets while rural stores averaged $10.84 for the same items.

The spread between namebrand and storebrand items jumped from nine per cent in November to 13 per cent in December according to the survey. A comparison of eight of the 14 items showed the average price of storebrand items to be $6.83, while the same namebrand items cost the consumer $7.89. November figures had shown a 72-cent difference between storebrand and namebrand food items.

The items which led December's decline in prices were, coffee, down from $3.51 to $3.42 a pound: shortening, from 59 to 58 cents a pound; and cornflakes, down from 64 to 63 cents a pound.

Items increasing in price included fresh pears, from 42 to 45 cents a pound; canned corn, from 34 to 35 cents a pound; bread, from 37 to 38 cents a pound loaf; eggs, from 78 to 82 cents a dozen large eggs; ground beef, from 94 to 96 cents a pound; and American cheese, from $1.65 to $1.66 a pound.

Potatoes, cabbage, canned peaches, sugar and whole chicken all remained about the same in price from November to the survey week in December.

Leatherman tops in Schuylkill DHIA

TAMAQUA -- The Schuylkill County Dairy Herd Improvement Association held its annual banquet on January 19, at that time Bruce Leatherman of Tamaqua R1, walked off with both the tops in individual herd record and also the high individual cow for the past year. Leatherman's herd averaged a production of 19,203 pounds of milk and 738 pounds of butterfat. The top performer in his herd is a cow named Lady with a production record of 25,997 pounds of milk and 1102 pounds of butterfat.

Second place award went to the Miller and Rex farm of Andreas, R1, with a production average of 17,717 pounds of milk and 712 pounds of butterfat per cow.

To put these high production records in perspective, they should be compared to the county averages of cows on test – pounds of milk 14,304, and pounds of butterfat 565.

Tom Jurchak, county agricultural agent from Lackawanna county, spoke on "Marketing Problems, Cause and Effect."

Grange meets

QUARRYVILLE – The Fulton Grange 66 held their monthly meeting at the Grange Hall, Oakryn, January 23, with Master Edward L. Zug presiding at the business session.

Roger Small, general manager of Pa. Power and Light's generating plant at Holtwood, assisted by his wife, showed slides of covered bridges for the program. The Smalls had taken the pictures of the bridges in several states as well as different countries in Europe.

Mrs. William J. Rhodes, lecturer will present a Valentine program at the next meeting to be held February 13.

Degrees will be conferred upon new members at the March 13 and 27 meetings.

Equipment sales likely to drop

CHICAGO -- Farm equipment retail sales will be down five per cent in dollar volume in 1978, but sales of farmstead type equipment could rise by about the same amount according to a recent survey of manufacturers by the Farm and Industrial Equipment Institute, trade association for the industry's manufacturers.

Results of the latest semi-annual survey of industry outlook by the FIEI reflected the weakness of crop prices and the relatively strong position of livestock farmers.

The forecast is based on estimates made by 47 manufacturers of field type machinery and 38 manufacturers of farmstead type equipment. The survey was made in late November and results were reported at the annual winter conference (1/20/78) of the FIEI Farm Equipment Division by the current Division President, Boyd C. Bartlette, who is vice president of the Farm Equipment Marketing for Deere & Company.

Farm equipment manufacturers, as a group, thought tractor sales might drop by 10,000 units, or 6 9 per cent, to 133,500 tractors They expected the greatest decline in the under 100 horsepower models.

In other product lines, here is what manufacturers anticipate:

A drop of 5.3 per cent in self-propelled combine sales to 27,000 units, with most of the decline in wheat areas. Sales of windrowers and swathers to be off 4.2 per cent, lower sales of moldboard plows, disk harrows and field cultivators, and a sharp drop of 22 per cent in sales of cotton strippers.

Sales of field type products also are reflected in improved strength in livstock prices according to the estimates of manufacturers. They expect an increase in sales of forage harvesters, mower conditioners, manure spreaders, hay handling equipment and grinder mixers.

In general, manufacturers of equipment used in field work felt inventories of equipment now on hand were "too high."

Farmstead type equipment manufacturers expected better sales because of improved livestock prices, the continued need for additional grain storage facilities and more on-farm storage and a trend to greater automation of farmstead operations.

The manufacturers expect sales to go up five per cent, grain bin sales to rise three per cent, but crop dryer unit sales to remain relatively steady.

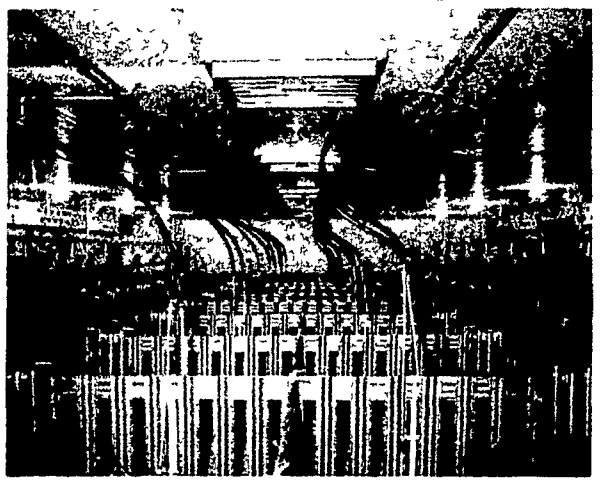
A number of the manufacturers also sell lawn and garden equipment. Bartlett said they expect a five per cent increase in sales in 1978.

A pound of fertile garden soil may contain as many as 50 million bacteria.

NORTHCO
FARM AUTOMATION SYSTEMS

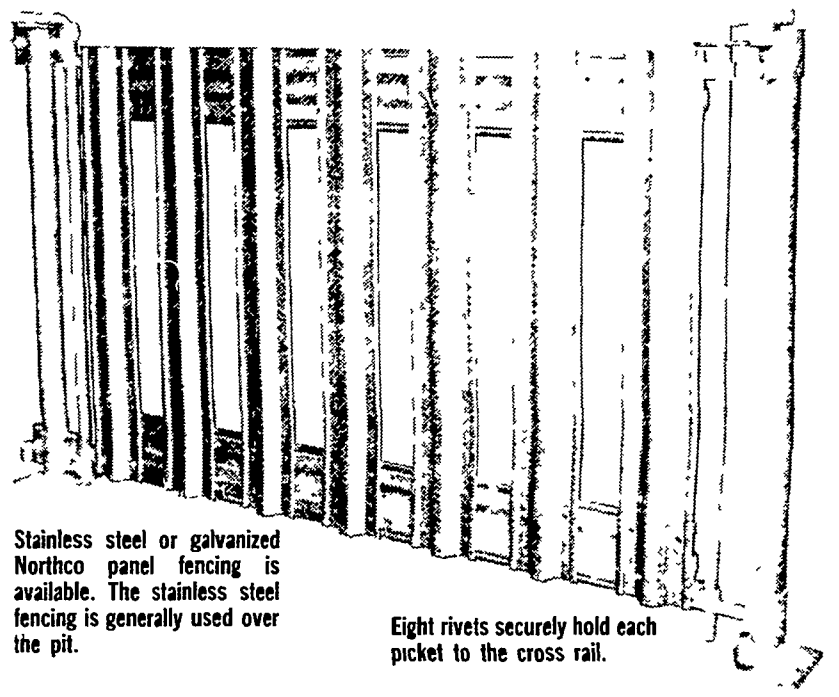
HOG FENCING BUILT TO LAST AND LAST!

NORTHCO PANEL FENCING



NORTHCO PANEL FENCING is available in stainless steel or galvanized. Stainless Steel panels are generally used over the pit.

Panels are designed with a positive locking system and can easily be opened with Northco's gate closure rod.



Stainless steel or galvanized Northco panel fencing is available. The stainless steel fencing is generally used over the pit.

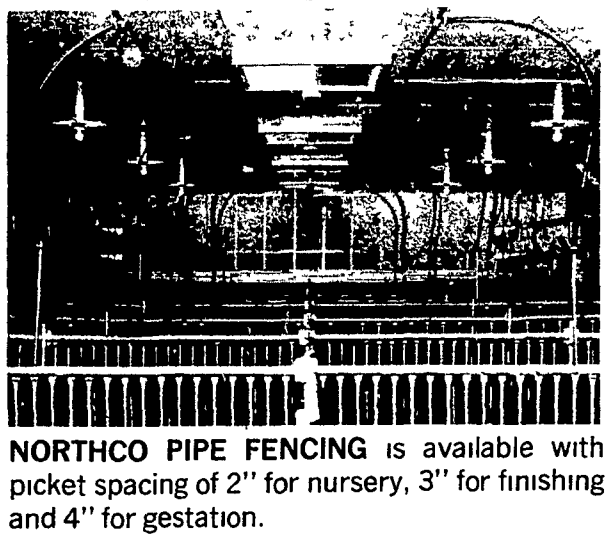
Eight rivets securely hold each picket to the cross rail.

HOG PANEL FENCING

MADE FOR CONFINEMENT

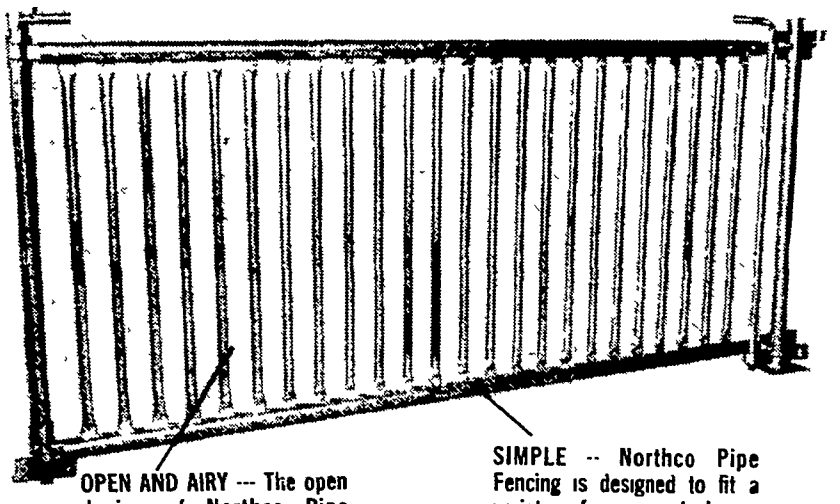
- Northco Hog Panel Fencing is built specifically for hog confinement by the experts in the field That's why Northco Panel Fencing has advantages like these
- UPRIGHT PICKETS—Hogs can't climb the upright pickets and the "open" design of Northco Panel Fencing aids the ventilation system
- EVERY SECTION SWINGS—The closure rod can be quickly removed so every fencing section in the building will act as a gate.
- EASY TO INSTALL—Hinges allow for some length adjustment to simplify installation. Also Northco Panel Fencing can be ordered in sizes to fit almost any hog building including both total confinement and open front systems.

NORTHCO PIPE FENCING



NORTHCO PIPE FENCING is available with picket spacing of 2" for nursery, 3" for finishing and 4" for gestation.

Sorting hogs is easier with aisle gates that open at either end. Northco's gate closure rod simplifies opening and closing time and keeps the gate locked securely the rest of the time.



OPEN AND AIRY -- The open design of Northco Pipe Fencing allows for easier air movement and better ventilation.

SIMPLE -- Northco Pipe Fencing is designed to fit a variety of pen and house arrangements.

PIPE FENCING

BUILT HOGHOUSE TOUGH

- STRONGER MATERIAL—Northco Pipe Fencing stands up strong to hoghouse abuse. Structural steel vertical pickets and horizontal rails made of 1 66-inch galvanized tubing add strength and increase resistance to corrosion.
- BETTER DESIGN—Hogs can't climb the vertical pickets used in Northco Pipe Fencing. This open design also allows for easier air movement and helps prevent manure build-up.
- ADAPTABLE—Northco Pipe Fencing comes in 2-inch, 3-inch and 4-inch spacing for use in nursery, finishing and gestation systems. Standard lengths from four to twelve feet are available

The Northco Hog Experts have designed SUCCESSFUL hog confinement systems since 1963. This experience is part of the reason Northco is considered the leader in hog confinement.

Farm trucking

(Continued from Page 23)

best to have their lanes opened in time, a few problem situations always come up. One of the most annoying is to have to put on and remove several sets of tire chains numerous times per route. This is very time consuming and causes a lot of the delays truckers encounter.

"We can't afford to leave our chains on when the roads are free of snow," said one hauler, "but we frequently need them to get in and out of farm lanes.

Whenever a storm comes up, the first decision a dispatcher for a hauling firm is faced with is whether or not to send the trucks out at regular times or not. Many truckers, for instance, begin their runs very early in the morning, possibly even as early as 2 a.m. During bad weather situations, it's often best to wait until at least daylight before the truck begins to roll to its destination.

On Friday, Jan. 20, not a single truck left the Ewell terminal in Lancaster County. Readers will remember that one of the worst storms in years hit Pennsylvania on that day. With roads being closed, Sheaffer really had no other choice but to keep the trucks at home.

The following day, Saturday, presented Sheaffer with the impossible task of picking up milk for that day and the day before. It can't be done, he admitted, so the next step is to study the routes carefully and begin picking up those who are the most desperate. Often this means just picking up some of the milk for the time being, leaving the farmer with just enough room in his tank to do another milking or two, instead of four or more.

To get it all done, drivers oftentimes work around the clock. They're dedicated men with awesome responsibilities. Not only do they have to worry about their patrons and the products they carry, they're in command of extremely heavy vehicles which are worth $70,000 each, minus the load.

The larger tank trailers plus tractor weigh 73,000 pounds when loaded. According to Sheaffer, that's the maximum gross weight allowed in Pennsylvania. The tractors usually cost in the neighborhood of $40,000 each, with stainless and aluminum trailers going for an additional $30,000. Handling one of those rigs, which is 50 feet in length, can be very treacherous on slick roads and farm lanes.

Dairymen undoubtedly remember the days when milk trucks were much smaller. Pick-ups were easier to make then, admits Sheaffer. But the larger trucks became necessary when milk was being moved longer distances. Today's tankers are admittedly oversized for many Pennsylvania dairy farms, making it difficult for drivers to maneuver them around buildings and twisty lanes. Hauling as much as 5,600 gallons when fully loaded, the large rigs have been the answer to keeping hauling costs more economical than they would have been otherwise.

One of the drivers employed by Ewell is Ronald Brown of Intercourse. Now in his sixth year as a driver for the milk hauling firm, Brown admits that after a couple of days of miserable weather, he wonders why he keeps at it. And he honestly can't tell you why, either. There's a lot he likes about his job, he says, but the going is pretty rough sometimes, and easier jobs could be found.

Brown smiled modestly as he went over some of the details of his job. "Truckers help each other," he said simply, "and farmers are pretty good too in helping out. They want their milk picked up." He admits a job such as his isn't easy, especially when 175 miles have to be covered on snow-covered roads with foggy conditions on top of it.

"It takes a particular kind of wife, too," added the veteran driver, acknowledging that the family has to be understanding of the circumstances.

Brown picks up milk from 20 farms on most days. Lately that has meant being on the road for as many as 20 hours at a time. Some others have gone more than that. If there's anything that makes it bearable, it's possibly the fact that drivers stay together and try to help each other out wherever they can. They're a close-knit group and they depend on that companionship to pull them through the roughest spots of their days. Also, many drivers enjoy relative independence with their work. "That means a lot," says Brown.

Russell Hollinger, a driver with 45 years of experience under his belt, hauls eggs for the R.W. Sauder firm of Lititz. Never in all his years of driving has he seen so much water in the country as he saw during the middle of this week. He drives anywhere from 130 to 230 miles per day, picking up as many as 900 cases of eggs.

Behind the wheel of one of Sauder's trucks for 25 years now, Hollinger also says that the past week or so has "been pretty tough on the nervous system." There's always tension, he says. What's made it rough for him and many others is the combination of ice and snow on the roads and thick fog all around. The mean conditions have stretched his working hours by more than a few in some cases.

Hollinger's supervisor, Paul Sauder, told Lancaster Farming that farm lanes often created the most difficulty since tire chains had to be installed and removed again once the truck is back on the highway.

Sauder picks up eggs within a 30-mile radius of Lititz and delivers them as far away as New York City and Washington, D.C. According to Sauder, 40 per cent of the streets in New York City weren't plowed as of last Monday. That gave his deliverymen and him the biggest headache of all. The transportation chief is quick to add, however, that his firm is "pretty fortunate – pretty lucky." They had no accidents and were able to keep the products moving. "It takes good drivers to do that," he commented.

Like many of his counterparts in the milk hauling business, Hollinger found it impossible to be on the roads on Jan. 20. He says he caught up pretty well on Saturday. He's one of 10 drivers employed by the Lititz egg handler.

All things considered and summed up, Hollinger blames no one for some of the bad experiences he's had to put up with. "We can't blame the farmer for the conditions of some of their lanes, they're busy too; and although some of the secondary roads were in bad shape, we got through."

"It was just an unhandy situation," he concluded.

Corn and soybean day slated

HERSHEY – A tri-county corn and soybean conference has been scheduled to take place here on Feb. 9 in the Heritage Room of Founders Hall. Dauphin, Lebanon and Lancaster County's Extension Services are sponsoring the day's activities, which begins at 9:30 a.m. and will end at 3 p.m.

At lunch, costing approximately $2.50 will be provided. Advance reservations will be necessary and are to be turned into one of the above mentioned Extension Service offices by Feb. 1.

Topics to be discussed during the program include fertility, micro nutrients, storage and handling, fitting corn and soybeans into the Future's puzzle, weed control, and economics of corn and soybean production.

Also, winners of the Five Acre Corn Club Contest will be announed and Dauphin County corn and weed plots will be discussed.

Speakers for the day's activities include Willis McClellan, agronomist; Joseph McCurdy, agricultural engineer; H Louis Moore, agricultural economist, and Fred Hughes, farm management specialist. All are on the staff of Penn State University.

Chairmen for the event are Denis Hoke and Arnold Lueck, Extension agents for Lebanon and Lancaster County, respectively.

cost a total estimated at $3 billion dollars.

This program, according to Dechant, will be an $8 billion package for farmer, and Senator Talmadge, who is known as a fiscal conservative, makes no apologies for it.

"The reason he makes no apologies," stated Dechant "is because the farm income situation is so devastating that something had to be done."

Dechant reported that Talmadge also cited farm debts and increasing costs of production as well as crop disasters and "boom and bust" activities for the "far from sound" state of U.S. agriculture, today.

Under the present farm bill, which Talmadge co-sponsored, the president has the authority to pass these proposals without legislative action.

Dechant, who is known as one of the critics of the 1977 Farm Bill as it now stands, is pleased with the action on Talmadge's part, saying that it is "just a beginning step in the right direction toward full parity for farmers."

"I stood in the rose garden when the Farm Bill was being signed," proclaimed the farm organization president, "And, I told reporters that this was a puny bill, but that we needed to get one on the books."

At that time he also stated that one of two alternatives had to be taken – either the administration had to exercise its authority to get the farm income upward, or the legislators would have to mandate higher price levels. Therefore, he was pleased this week that Talmadge made the recommendations he did.

After his disclosure of Washington news, Dechant launched into the Farmers Union concept of parity, calling it "fairness for farmers."

He pointed out that at the present there is a concerted effort to discredit parity, but that Farmers Union considers it a justifiable, defensible concept.

"Scare tactics abound in the press," the national president charged. "They are saying that government prices would deprive farmers of their independence, and would take away their decision making."

He went on to assert that parity prices have nothing to do with total government control – parity is simply a measure by which the government gives the farmer a guaranteed income.

Dechant also stated that critics claim the gross national product would drop if parity prices are reached.

Tony Dechant

To this criticism, he charged, "What do you think we'd do if we got 40 billion more dollars? We'd spend it and we'd increase the economy and create more jobs."

According to statistics cited by this organization leader, there have actually been 10 years in United States history during which time prices have been better than 100 per cent of parity; six years when they were between 90 to 100 per cent of parity; 11 years between 80 to 90 per cent; and 11 years between 70 to 80 per cent.

"When they use scare tactics, they forget we've had parity all these years," he pointed out as a climax to his listing.

There have actually been only two years during which prices have been below 70 per cent of parity – in 1933 and last year.

As an alternative to parity, Dechant offered several other systems which he deemed "fair to farmers."

One system, he wryly pointed out, would be for farmers to get a return on their investments comparable to the private utilities – anywhere from six to 16 per cent net return.

"At that rate, we'd have 60 billion dollars instead of the 20 billion we got last year," he said, adding that full parity prices also tally up to $60 billion dollars.

Commenting on the national scene, in general, Dechant stated that a cheap food policy in America has "somehow been a God-given right," but that the farmer will not be able to comply for long with land values beginning to drop.

"We could do it as long as land values were appreciating, but when land prices drop in Illinois and Iowa, we're in trouble," he declared.

In summation, he stated that getting the Congress to amend the Farm Bill is the second step to parity, and that farmers and farm organizations must keep striving for parity in fairness to themselves.

xxx

Photo by George Gardner

Glenn Porter and a Colombian worker do routine spraying for ticks and other skin parasites on the animals at "Bonaire."

Photo by George Gardner

Lola Porter watches while tribesmen print stories on a flat bed mimeograph, during a bilingual course offered at the training center. This is part of the ongoing work of teaching key tribesmen to teach others.

New life in South America satisfying to former Lancaster County farmers

By SALLY BAIR
Staff correspondent

Six years ago Glenn Porter was a successful livestock farmer, working with his father Edgar at their Washington Boro R1, farm. His wife Lola was enjoying her work as an elementary school teacher at Creswell in Manor Township.

Today Gelnn and Lola are living in Colombia, South America and Glenn is still farming - but the methods are different, as is the lifestyle. The Porters are "support" people for Wycliffe Bible Translators whose work it is to translate the Bible into tribal languages around the world. They feel at home in their tropical setting and are pleased with the change in their lives.

Glenn and Lola reflect on their new work at Glenn's parents' home just as they were completing a four month visit to Lancaster County and were busily preparing for a return to their chosen work. Lola said, "We liked what we were doing here at the time but we both felt a dissatisfaction. We felt the Lord was leading us in this direction. We were acquainted with Wycliffe through friends and Wycliffe had jobs which we were qualified to do. We definitely felt led to do something full time."Glenn is farming at "Finca Bonaire," a training center which is a part of the Wycliffe "base camp" at Lomalinda, Colombia, about a 10 to 12 hour bus trip south of Bogota, the capital of Colombia. The center provides training to Indians who come there from their home tribes and spend several weeks learning new methods of agriculture.

In explaining the necessity of training the Indian natives, Glenn said, "The primary method of farming used by many tribes has been 'slash and burn' which means the tribes would clear an area, stay for a period of time and then move on to a new area." The tribes lived off wild game, but both land resources and game resources are becoming scarce, and this scarcity is dictating a need for more progressive agricultural methods, so the tribes can remain in one location.

Glenn's primary job is to maintain the farm which has nearly 1000 acres. Because of swamps, however, a much smaller acreage is farmed. Glenn said, "I do anything a farmer does. We take care of the equipment, make what we need, and care for the animals." The center raises cattle, hogs, chickens and rabbits, which are very efficient meat producers. There are also a few horses to chase the cattle, Glenn said.

As the cold January winds gust around the farm house, Glenn says life in Colombia is definitely different from his life as a farmer here. "There is no Winter - but it gets boring with no change in the weather."

Lola said that it is now "in the 90's" there, but said it cools down at night. Once, she recalls, it even got down to 59 degrees - a real cold wave!

The animals, Glenn said, are accustomed to the heat, but even so, the hogs do mind severe hot spells. The purpose of most of the cattle raised there is for breeding stock to supply the tribemens who have attended the training program. The center will supply baby chicks, calves or pigs, and fly them to the tribes. There is also an Extension-type program, which follows up on the training and offers help as needed.

A few crops are raised on the farm to show the Indians methods of planting and harvesting. The main crops are not corn, soybeans, and wheat, but "plantano," a cooking banano, "yuca", a root crop, and "ramia", which is a leafy high protein plant. Glenn says there are currently vegetable experiments being carried out, but people generally prefer a high starch diet.

The farming equipment used there is familiar. Glenn says, "We have a tractor and a plow, and I borrow a disc harrow - from a Colombia farmer." The difficulty comes, however, in getting parts for the equipment. The nearest dealer is 80 miles from their farm - and not all parts are readily available.

He sums up the problems he encounters by saying, "Everything takes longer - it is just not as convenient as here."

Glenn explained that there are a lot of nutritional problems and disease problems with animals there. To feed grain "is out of the question - it is too expensive." Most of the farm is in pasture.

Trainees are invited from tribes with which translators are working. They come voluntarily, so Glenn says, "In most cases they are willing to accept what we teach."

Before the Porters were accepted into the program, they took extensive training, and then traveled to southern Mexico for jungle training, "to get used to more primitive conditions." They had extensive language training and still have a bit to learn." She said Glenn has learned faster because he works with Spanish-speaking people every day. When they first arrived Colombia Lola's work was teaching other volunteers' children in the school, so she spoke predominatly English. Now she is working with clerical duties at the training center and is more involved with Spanish.

When the Porters first arrived in South America, they lived at the base camp, Lomalinda, and Glenn traveled the three miles to the farm four times daily. Three miles is not far, but the trip was time-consuming because of road conditions and heat - and his method of traveling was a Honda motorcycle. Lola says she rides the Honda motorcycle. Lola says she rides the Honda regularly.

In their present home at the training center there is electricity and running water - but not hot water. However, Glenn laughingly said that cold running water in Colombia did not compare with the cold running water here in January.

(Turn to Page 46)

HOMESTEAD NOTES

Lola holds some beads she brought with her from Colombia, and shows some other mementoes she has collected while there.

Glenn and Lola peruse some of the many books which have already been translated into Indian tribal language. Some are primers and some are books of the Bible.

Junior Cooking Edition

This week the Junior Cooking Edition offers recipes for cookies, pudding, a chocolate cake, and especially for the season, snow cream, of which the main ingredient is the snow that seems to be so plentiful this Winter. So, on those days that you don't feel like playing outside, there will be something for you to do and try in the kitchen.

Rose Marie Hoover, in Denver, Pa., is still looking for a recipe for homemade cotton candy. If there is anyone who has such a recipe, please send it to the Junior Cooking Edition and she will get it.

Keep those recipes coming to: **Lancaster Farming**, Junior Cooking Edition, Box 366, Lititz, Pa. 17543. Please write your recipes neatly and include complete directions along with a list of ingredients.

SNOW CREAM

3 quarts of snow
1 teaspoon vanilla
½ cup granulated sugar
1½ cup milk

Wait until it snows, then gather fresh snow from outside. Put snow in a large mixing bowl. Add sugar and vanilla. Stir. Add milk. Stir well. Freeze. Serve.

Danny Stoltzfus
Age 11
Conestoga, Pa.

xxx

GRANDMOTHER'S CHOCOLATE CAKE

3 eggs
½ cup shortening
1 cup milk
2 cups flour
1¾ cup granulated sugar
½ cup hot water
1 teaspoon baking soda
Small amount of salt and vanilla
½ cup cocoa

Mix ingredients together in large bowl and blend until well mixed. Pour into cake pan and bake at 350°F. for approximately 35 minutes or until done.

Bennel Stoltzfus
Age 8
Conestoga, Pa.

xxx

GRAHAM CRACKER FLUFF

1½ cups milk
6 egg yolks
1 cup granulated sugar
1 large package of red or orange flavored gelatin
6 egg whites
1½ cups whipped cream
Crumbs:
18 graham crackers
¼ cup granulated sugar
½ cup butter (melted)

To make crumbs, break or roll crackers. Add sugar and butter. Mix well and use to line the dish in which to put the pudding.

Bring milk to boil. Add eggs and sugar. Cook. Remove from heat and add gelatin. Allow to cool a little, then add six stiffly beaten egg whites and whipped cream. Pour into dish lined with crumbs.

Malinda Miller
Age 11
Dover, Del.

xxx

COOKIES

¼ cup margarine (melted)
1 cup graham cracker crumbs
1 cup or 6 oz. chocolate chips
1 can cocoanut (flaked)
1 can (13 oz.) condensed milk
1 cup chopped nuts

Melt margarine in a 13 x 9 inch pan, add next ingredients in this order. First sprinkle crumbs, then chips, next cocoanut. Pour milk over all and sprinkle on nuts over top. Do not mix. Bake for 30 minutes at 350°F. Cut in squares while still hot. It is important to use the correct sized pan.

Tamara Snyder
Age 15
Littlestown, Pa.

PEANUT BUTTER BALLS

1 lb. margarine
2 cups peanut butter
2½ to 3 lbs. 10-x sugar
3 teaspoons vanilla
6 oz. semi-sweet chocolate
¼ lb. (or less) of paraffin wax

Cream margarine and peanut butter together. Add sugar until consistency of mixture will form small balls the size of large marbles. Add vanilla to mixture and stir thoroughly. This is best done by hand. Make marble sized balls. Melt chocolate and wax in a double boiler. Dip balls in the chocolate wax mixture using a toothpick to dip. Place balls on wax paper. This candy will keep well frozen.

On being a farm wife

—And other hazards

By JOYCE BUPP

What is wrong with Mother?

Hear Mother scream. See Mother tear at her hair. Oh, look at Mother peer out the window at the sixth straight day of snow and ice. Why is Mother crying?

Watch Mother turn on the radio. See her listen carefully. Doesn't Mother turn a pretty shade of green when school is cancelled again?

Now Mother runs the vacuum cleaner. The floor was not dirty. Listen to the lovely sound the sweeper makes. Mother likes that sound. It covers up the yells of fighting snow-bound children.

See the children sit quietly in chairs. They are reading books. Mother has put them there for an hour. It was not nice to give the cat a haircut. Why is Mother banging her head against the wall?

See Mother dance around the kitchen on one foot. Has Mother taken up ballet lessons? No, Mother has stubbed her toe on the toy crane left parked in front of the refrigerator. No, Mother, toys do not belong in the trash can.

What is Mother picking up off the floor? See Mother put wet mittens, soggy socks, damp underwear, drippy coats, and soaked hats in the dryer. See Mother dump lots of snow out of children's boots. Watch Mother mop the snow off the floor. Oh, Mother is so busy! Why does Mother shake her fist when someone mentions going back outside to play?

Why did Mother turn off the television set? Mother does not believe in brothers and sisters hitting each other over the head with books. Mother thinks they should agree on a program to watch without clobbering one another.

Who has left the marbles on the steps? Mother has unexpectedly found them. She was going upstairs with a box of her good china. Who will help pick up Mother? Who will get the broom to sweep up the pieces?

See the black and blue Mother turn on the radio. Watch Mother listen to the announcement that school will be held tomorrow.

See Mother laugh! See Mother clap her hands! See Mother jump up and down!

Do you think Mother will make it through the rest of the Winter?

Virginville Grange meets

VIRGINVILLE – Members were honored at the most recent meeting of the Virginville Grange for soliciting members for the past year. Those honored were: Mildred and Walter Wessner, 15 members; Ernest Miller, 11 members; Willard Dreibelbis, six members; Nevin and Jane Hill, Joyce Deitrich, Lawrence Sunday, and Clarence Schlegel, four or five members.

Upcoming dates include: February 1 to April 30 – sewing contest for Grange members. Rules are available and 50,000 entries are expected.

February 1 – next meeting. Lloyd Moll will speak on wills at this open meeting.

February 6 - The Women's Activities meeting will be held at the Grange hall at 7:30 p.m. and on February 13 they will be going to the Hamburg State School to play bingo. Eight or nine women are needed for this. Those women will meet at the Grange Hall at 6 p.m.

February 26 – Meeting will be held at 2 p.m. at the Trexlertown Grange, Lehigh County, for all officers and committee chairmen. Anyone interested can attend.

First three Mondays in March – Grange will have a CPR course.

The program for the January meeting was a slide show on the West by James Gift.

Landis joins Agricol

PHILADELPHIA – Albert Landis, well known Lancaster County grain buyer has joined Agricol Corporation, Inc. of Philadelphia. Announcement was made by Carl H. Wolff, Executive Vice-President, of the Philadelphia based grain firm.

Landis, a native of Lancaster County who resides at 2101 Oregon Pike, Lancaster, Pennsylvania, started with the old Miller & Bushong Company and eventually became the head grain buyer of its successor, the Pennfield Corporation.

Widely known among the farmers and feed men of the area, Landis will be buying grain and merchandising feed ingredients for Agricol Corporation, Inc.

New life

(Continued from Page 42)

There is a small apartment-size refrigerator and a gas stove. Despite the conveniences, it is not quite like home. They order fresh vegetables and eggs once a week from Bogota.

"Sometimes you get what you order, and sometimes you don't, "Lola admits. "And what you do get you don't just put away. Anything that is not going to be cooked, you scrub and soak it in an iodine solution for one half hour to kill any bacteria." Other staples Lola purchases at the commissary in Lomalinda - and carries them home on the Honda. The hot weather makes all work proceed more slowly, and the kitchen is no exception. Lola says, "I make everything from scratch."

As support people, the Porters are not in direct contact with the Indian tribes for whom Wycliffe is translating, but Lola explained the work. Translators go to live with the remotest tribes, get to know them, and study their language, which is completely different from any of the known world languages. As they learn the language, they translate the Bible into these foreign tongues so the tribesman can learn the work of God.

Lola points out, "There are 46 languages in which Wycliffe hopes to accomplish a translation and they now have groups working on 33 of these languages." This is in the country of Colombia alone.

Lola noted that some of the tribesmen with whom the group works in South America have had contact with Christian missionaries, but most cannot read, and if they hear the words in Spanish, their country's language, it doesn't make sense to them because their tribal language is so different. Lola said, "The work of Wycliffe is not a preaching mission. Their goal is to get the Bible into the language so that people can begin getting the Word and then believe in it."

Acknowledging that literacy is a part of the program, Lola said, "If the translators have no knowledge of the language, then they spend time listening. Sometimes they do medical work to get to know the tribe." She said the teams spend time with the tribes, then return to base to assimilate what they have learned before returning again to the tribes.

Both the Porters have had previous international living experience. Glenn was an International Farm Youth Exchange delegate to Nepal in 1961 and Lola was an IFYE from Snyder County to England in 1960. They agree that these experiences have been helpful to them in their new situation. "We already knew a lot about traveling and getting along with people," Lola said.

Progress may be slow sometimes, but the rewards are satisfying when they come. Glenn has had the opportunity to see some of the tribes when he has helped to deliver livestock from the training center. He says, "It is really good to see the Indians putting to use what we teach them."

Spiritually, Lola said, "It is rewarding to see Indians who were in bondage to the fear of evil spirits come to know Christ and have release from their bondage."

The Porters are back in Colombia now, readjusting to the tropical heat and returning to the life to which they have committed their future. The Porters say, "We are not a permanent fixture. When the tribes have the language and can read, we will be done in Colombia." For the foreseeable future, however, Glenn's work as an agriculturist will go on with Lola supporting and working along side in their "new" home.

Ladies Have You Heard?

By Doris Thomas

Lancaster Home Economist

ABOUT THE DIFFERENCE IN CHEESES

Too often, we select products from the grocery store without reading or understanding the labels. For example, do you know the difference between cheese, pasteurized process cheese, pasteurized process cheese food, and pasteurized cheese spread?

On the grocery shelf, the appearance of some of these products is identical, yet there is considerable difference in the production and contents of each product. Usually, the label is your only clue in differentiating among these cheese products.

Natural cheese is produced by separating milk solids from milk by curdling it with a bacteria culture. The curd is then separated from the whey and aged to produce a variety of cheeses.

The production of natural cheese starts with fresh milk. But the production of pasteurized process cheese starts with a blend of fresh and aged natural cheeses. The natural cheeses are shredded, mixed, and heated (pasteurized), after which no further ripening occurs. The blend may consist of one of more varieties of natural cheese and may contain pimentos, fruits, vegetables, or meats. A smoked flavor may also be added.

Add the word "food" to pasteurized process cheese and you have a different product. Cheese food is prepared in much the same manner as process cheese except it contains less cheese, and has nonfat dry milk, or whey solids and

Ida's Notebook

Ida Risser

Outside my kitchen window is a world of snow and ice which has given the children several days of vacation from school. But inside on the windowsills live a profusion of plants with clusters of white, pink, fuchsia, and red blossoms.

The paper white narcissus is almost overwhelming with its fragrance and the begonias bloom on and on. However, my favorites are the Impatiens with their various hues and even variegated varieties. When the cold west wind blows, I carefully place them on the floor for the night and away from the frosted windows. The almost 100 plants take a bit of care but to me they are worth it, as I'm repaid by having handy an instant gift for a visitor, besides the pleasure I derive from watching them grow.

xxx

My mother has allowed me to read her diary of the early years of her marriage. She writes of the long drives with a horse and buggy, past tollgates, to a "lyceum". I had to hunt the word in a dictionary to learn that it was a public lecture hall. They had rags made into rag carpet for their home by a man in Akron. Threshers got three meals a day and these were cooked in the summerhouse.

Besides taking chickens, eggs, and butter to market weekly, they also dug one bushel crate of dandelion, and later picked two bushel of elderberries. In season, artichoke flowers and bittersweet were gathered and also taken. I read that my grandmother "flitted" or moved into her home. Then on Aug. 27, 1920 a man came to register **women voters.** Sometimes my parents would walk one mile to visit relatives or go to a neighbors house to hear a **radio.** Soon afterwards, they purhcased one for themselves.

Milk was sold to neighbors for 8 cents a quart and the tobacco brought 9½ cents per pound for wrappers and 2 cents per pound for fillers. Then, even as now, there were good times and bad times.

Schedules listed for Lanc. workshops

LANCASTER -- Once again, the Lancaster County Extension Service of Penn State University is offering home economics workshops for the coming Winter. These courses are to be held in the Extension Training Center at the Farm and Home Center, 1383 Arcadia Road, Lancaster. All classes will be filled on a first-come-first-serve basis with the deadline noted with each course description. Those interested in enrolling in the workshops should contact the Lancaster County Extension Service at 717-394-6851.

The following is the list for the coming months:

Introduction To Sewing - A series of four classes for the true beginner. Learn how to operate a machine in class fabric fundamentals, basic stitching techniques. Make a simple project such as a wrap-around skirt. Instructor: Susan Doyle. Cost $10.00. Workshop No. 1 - Classes will be held from 1 to 3 p.m. on Mondays February 13, 20, 27 and March 6. Registration deadline February 8.

The Classic Shirt - A series of six classes for a look always in style. Basic techniques used for a blouse, a shirt, a shirtwaist dress or a shirt jacket will be taught. Techniques taught will include: when and how to use interfacing; simple collar and cuff construction, how to set a sleeve, buttons and buttonholes, belts; and working with plaids. Instructor: Susan Doyle. Cost $15.00. Workshop No. 2 - Classes will be held from 7 to 9 p.m. on Mondays February 13, 20, 27, March 6, 13, and 27. Registration deadline February 8.

Cutting-To-Fit - A series of eight classes during which you will learn how to alter a basic pattern to fit your individual figure problems to perfection; draft your own basic pattern in pellon; use this basic pellon to know where to alter commercial patterns and use it to create a variety of garments for your wardrobe. Instructor: Ruth Finkel. Cost 20.00. Workshop No. 3 - Classes will be held from 7 to 9 p.m. on Mondays February 13, 20, 27, March 6, 13, 27, April 3 and 10. Registration deadline February 8.

Fashion Tailoring for Women - A series of eight classes presenting the basic simplified secrets of construction involved in tailoring a professional looking wool suit or coat. Techniques used in constructed and unconstructed tailoring will be demonstrated. Instructor: Virginia Kloss. Cost $20.00. Workshop No. 4 - Classes will be held from 9:30 to 11:30 a.m. on Tuesdays February 14, 21, March 7, 14, 21, 28, April 4 and 11. Registration deadline February 8.

Jiffy Tops - A series of five classes designed to give your wardrobe a new coordinated layered look. Learn to construct "tops" for the pants and skirts you already have. A study of speed sewing methods for constructing the overblouse, vest, jacket, cardigan, and blazer will be covered. Instructor: Ruth Finkel. Cost $12.50. Workshop No. 5 - Classes will be held from 9:30 to 11:30 a.m. on Tuesdays March 7, 14, 21, 28 and April 4. Registration deadline March 1.

Tailoring For Men - A series of eight classes presenting techniques, which will give professional looking results, in constructing a man's wool jacket, trousers, and vest. Instructor: Virginia Kloss. Cost $20.00. Workshop No. 6 -

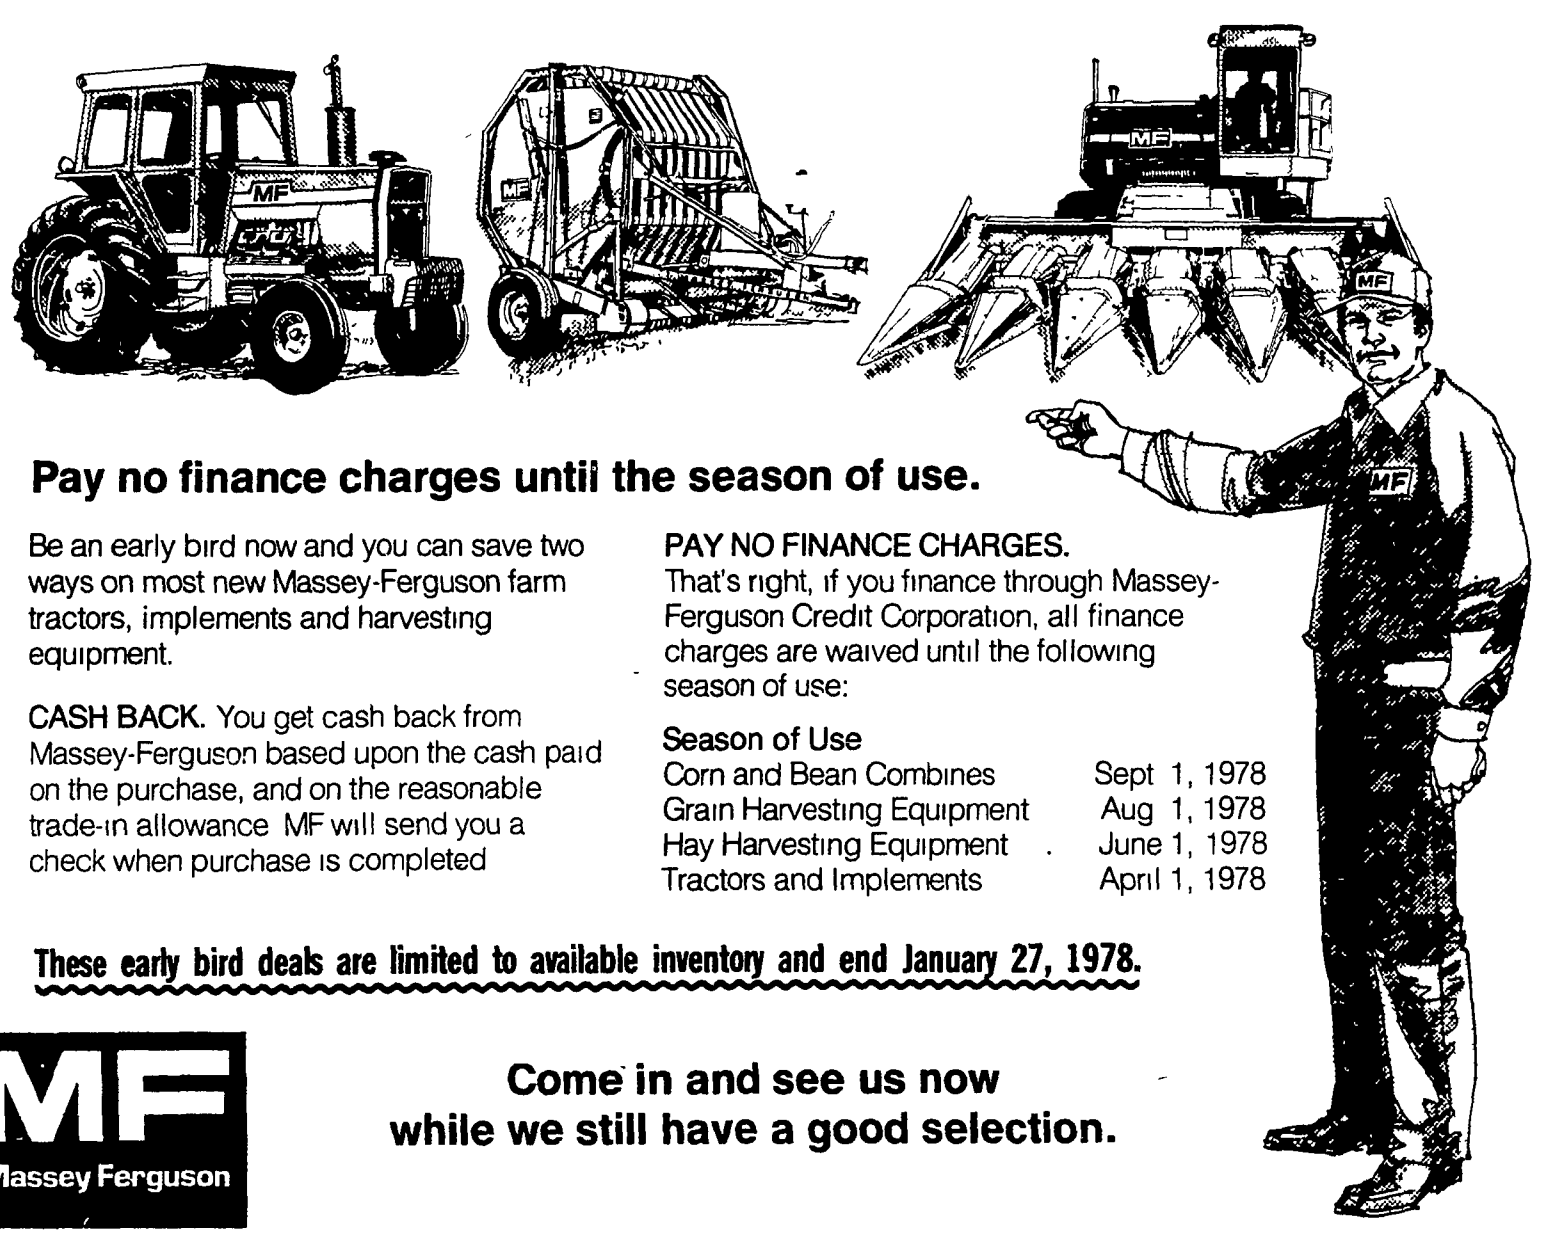
Be an early bird!

BUY NOW AND GET CASH BACK!



Pay no finance charges until the season of use.

Be an early bird now and you can save two ways on most new Massey-Ferguson farm tractors, implements and harvesting equipment.

CASH BACK. You get cash back from Massey-Ferguson based upon the cash paid on the purchase, and on the reasonable trade-in allowance MF will send you a check when purchase is completed

PAY NO FINANCE CHARGES. That's right, if you finance through Massey-Ferguson Credit Corporation, all finance charges are waived until the following season of use:

Season of Use	
Corn and Bean Combines	Sept 1, 1978
Grain Harvesting Equipment	Aug 1, 1978
Hay Harvesting Equipment	June 1, 1978
Tractors and Implements	April 1, 1978

These early bird deals are limited to available inventory and end January 27, 1978.

(Continued from Page 47)

Classes will be held from 9:30 to 11:30 a.m. on Mondays February 13, 20, 27, March 6, 13, 20, April 3 and 10. Registration deadline February 8.

Pants That Fit - A series of six classes where you learn how to draft your own basic pants pattern – designed to flatter your figure, feel comfortable, and fit well; how and when to line; work with plaids, stripes and border prints; and become acquainted with techniques used in constructing pants. Instructor: Ruth Finkel. Cost $15.00. Workshop No. 7 - Classes will be held from 9:30 to 11:30 a.m. on Wednesdays February 15, 22, March 1, 8, 22 and 29. Registration deadline February 8.

Menswear Clothing Construction - A series of four classes designed to present professional techniques used to construct men and boys' slacks, shirts and vests using double knits. Instructor: Virginia Kloss. Cost $10.00. Workshop No. 8 - Classes will be held from 9:30 to 11:30 a.m. on Wednesdays March 8, 15, 22 and 29. Registration deadline February 28.

Make Your Own Draperies - This workshop consists of a series of three meetings planned to help you learn how to select drapery fabric and hardware. Methods for making lined and unlined draperies using pleater tape and custom pinch pleated headings will be presented. There is no fee for this workshop. Instructor: Doris Thomas. Workshop No. 9 - Classes will be held from 7 to 9 p.m. on Tuesdays February 28, March 7 and 14. Registration deadline February 22.

Bargello For Beginners – This workshop is designed for those individuals who want to learn the basic Bargello stitches. Instructor: Doris Thomas. Cost $4.00 for supplies: Workshop No. 10 - Classes will be held from 1 to 3 p.m. on Mondays February 13 and 20. Registration deadline February 8.

Beginner's Needlepoint Workshop - Two classes designed to teach the basic stitches used in the age-old art of needlepoint. Instructor: Doris Thomas. Cost $4.00 for supplies. Workshop No. 11 - Classes will be held from 1 to 3 p.m. on Mondays March 6 and 13. Registration deadline March 1.

Oriental Cuisine - Enjoy the pleasure of preparing simple and quick Chinese meals. Cooking is a distinctive art to the Chinese, served with grace, elegance and ceremony. This one-class course will introduce you to the basic ingredients, equipment, and utensils and easy-to-prepare Chinese meals. Instructor: Aggie Arnold-Norman. Cost $1.00 for supplies to be paid at time of class. Workshop No. 12 - Will be held from 1 to 3 p.m. on Tuesday, February 7. Registration deadline February 1. Workshop No. 13 - Will be held from 7 to 9 p.m. on Tuesday, February 7. Registration deadline February 1.

"Cooking With Waves" – Revolutionize your cooking habits by learning to use your microwave oven efficiently. If you need some moral support to cook with your microwave, join us! Instructor: Aggie Arnold-Norman. Cost $1.00 for supplies to be paid at time of class. Workshop No. 14 - Will be held from 7 to 9 p.m. on Tuesday, February 21. Registration deadline February 14. Workshop No. 15 - Will be held from 1 to 3 p.m. on Wednesday, February 22. Registration deadline February 14.

Irrigation water use studied in Lebanon County

LEBANON – The Lebanon Conservation District will be assisting the Pennsylvania Department of Environmental Resources to update information pertaining to irrigation water use throughout Lebanon County. Data collected will be utilized by DER in formulating the State Water Plan.

Personnel of the district attended a training meeting in Harrisburg on January 25th to determine the strategy for completing the project. Direct lines of communication will be opened between irrigators and DER water planners.

Irrigation water use is a major consumptive water use in Pennsylvania. In the event of future drought conditions, adequate irrigation water must be available to farmers for sustained crop production. This updated information will more accurately determine needs and trends for the use of irrigation water.

Pennsylvania is one of 10 states nationally that are participating in a pilot program with the U.S. Geological Survey to establish a national water use data system. Survey information gathered by conservation districts will be supplied to the USGS program.

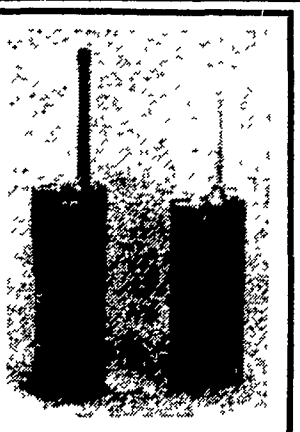
Motorola Presents the Farm Implements



For most farmers, the key to profitability in the current cost/price squeeze will be improved efficiency. Motorola's communications systems can help you, the farm manager, coordinate widespread activities with a minimum of wasted labor time, fuel and missed opportunities. Is the picker-sheller ready to be unloaded? Is there a truck free to unload it? What happens when equipment breaks down? How quickly can you respond? Every time your phone rings, your cost/price situation can change completely. Let us show you how Motorola FM two-way radio can help you stay on top at a time when efficiency makes all the difference.

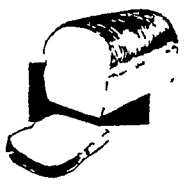
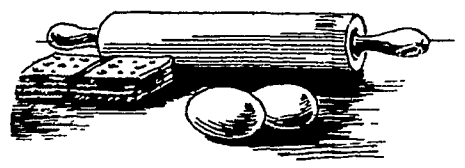
Home on The Range





This week "Home on the Range" is featuring corn - one of the most universally loved American vegetables. Unfortunately, many times corn is prepared by only one method – boiling fresh or frozen kernels. However, there are a myriad of other ways to make this vegetable. We will share some different recipes with you this week thanks to recipes gathered by Muncy-Chief Hybrids, Muncy, Pa.

The last three recipes in this week's column are from readers who are helping us fill in the gap until we get to February's recipe themes. We're going to need help with those themes, so any recipes you have which might fit under the various categories should be sent to "Home on the Range,"- Lancaster Farming Newspaper, Box 366, Lititz, Pa. 17543.

CORN AND SAUSAGE CASSEROLE

1 quart of canned corn
1½ pounds pork sausage
3 well beaten eggs
1 cup bread crumbs
1 teaspoon salt
1/8 teaspoon pepper

Cover generously with tomato catsup. Bake in casserole at 350°F about one hour.

xxx

Recipe Theme Calendar

FEBRUARY	
4	"Cooking with Soups" Deadline Jan. 28
11	"Cooking with rice" Deadline Feb. 4
18	"Cooking with nuts" Deadline Feb. 11
25	"Cooking with tomato paste" Deadline Feb. 18

CORN OYSTERS

6 ears fresh corn
3 eggs separated
¼ cup flour
½ teaspoon salt
¼ teaspoon pepper

Grate the corn and add the beaten egg yolks. Season with the salt and pepper and stir in the flour. Add the stiffly beaten egg whites and blend. Drop by spoonfuls, the size of oysters, onto a well greased griddle and fry until nicely browned.

xxx

CUSTARD CORN PUDDING

2 cups milk
1 tablespoon margarine
4 eggs, slightly beaten
1½ teaspoons salt
¼ teaspoon pepper
1 teaspoon sugar
1 can (1 pound) whole kernel or creamed corn, drained

Scald milk; stir in margarine. Blend eggs with salt, pepper, and sugar. Gradually stir in milk mixture; add corn. Pour into 1½ quart casserole, set in shallow pan. Pour boiling water into pan to one inch. Bake in preheated 350° oven until knife inserted into center of custard comes out clean – about 45 minutes.

xxx

WHOLE KERNEL CORN BREAD STUFFING

¾ cup minced onion
1½ cups chopped celery
1 cup butter or margarine
8 cups bread cubes
2 teaspoons salt
1½ teaspoons crushed sage leaves
1 teaspoon crushed thyme leaves
½ teaspoon pepper
1 can (12 oz.) whole kernel corn, drained
½ cup chopped green pepper

In large skillet cook and stir onion, celery, and green pepper in butter until onion is tender. Stir in about ⅓ of the bread cubes. Turn into deep bowl. Add remaining ingredients; toss lightly. Stuff turkey just before roasting. Makes nine cups - enough for a 12 pound turkey.

xxx

CORN SOUP

12 fresh ears of corn
4 hard-cooked egg yolks
1 tablespoon flour
1 teaspoon salt
½ cup butter, melted
1 teaspoon minced parsley

Remove the husks, silk, and blemishes from corn. Grate the corn from six ears. Barely cover the cobs with cold water; bring to boiling and cook 45 minutes. Meanwhile, cut the corn from remaining ears and combine with the grated corn. Mash the egg yolks and blend with the flour, salt, and melted butter. Slowly add the water in which the cobs have cooked, stirring constantly. Add corn and parsley. If mixture is too thick add enough milk for

How to save $20 a year

with your Electric Water Heater

• Takes about 30 minutes!

• Only about $10 worth of materials!

Smart move. Wrap a blanket of 3½"-thick insulation around your electric water heater. Because it reduces heat loss through the tank jacket, it saves heating energy. You'll save about $20 worth of electricity each and every year.

It's fast, easy and inexpensive. A roll of ordinary household insulation (R-13), some duct tape, scissors and a pair of old work gloves should do it.

For more information, call or write PP&L. Ask for our free folder on how to insulate your electric water heater. ***Safety note: If your water heater is not electric, check for advice from your fuel supplier before attempting to insulate it.***

"Saving energy... saves for all of us" PP&L

desired consistency. Bring to boiling; cook 10 minutes.

xxx

CORN PUDDING

2 egg yolks
½ teaspoon of salt
pinch of pepper
2 tablespoons of butter
1 cup of milk.
beat together and add
2 cups of cooked corn
1 tablespoon of flour and
1 tablespoon of sugar

Pour in a greased casserole and bake in a moderately slow oven (350°F) for about 45 minutes.

xxx

CORNCOB JELLY

12 corncobs
1 box Sure Jell
3 cups sugar

Take 12 corn cobs, wash well, break in half. Place in a kettle, cover with water, and simmer for 30 minutes. Remove corn cobs, strain liquid through cloth. Take three cups of liquid from kettle. If not enough liquid is in kettle, add water to make three cups. Add Sure Jell. Bring to a full rolling boil. Stir constantly. Then add three cups sugar and bring to a boil again. Boil one minute, then ready for the jar. Gives a nice, thick jelly. About 1½ pint.

Martha Martin
Kutztown, Pa.

xxx

PUMPKIN PIE

4 eggs
½ cup molasses
1 cup sugar
3 tablespoons flour
¼ teaspoon salt
2 cups milk, scalded
1 cup pumpkin
1 cup coconut (or less, if preferred)

Separate eggs and add sugar, molasses, and flour to egg yolks. Add pumpkins and milk and beaten egg whites last. Bake in a hot oven (425 degrees F.) for 15 minutes. Turn down oven to 350 degrees F. and bake for ½ hour. Makes two pies.

Lena Mae Neswanger
Ephrata, Pa.

xxx

BRAZIL NUT FRUIT CAKE

3 cups shelled Brazil nuts
1 pound pitted dates
1 cup drained marashino cherries
3 eggs
¾ cup sugar
½ teaspoon baking powder
½ teaspoon vanilla
¾ cup sifted flour

Place nuts, dates, and cherries into large bowl. Sift flour, sugar, baking powder, and salt over nuts and fruits. Mix with hand until nuts and fruits are coated. Beat eggs until foamy and add vanilla. Stir into nuts and fruit mixture until well mixed. Leave nuts, dates, and cherries whole. Turn into greased and waxed paper-lined pan that is 9½ by 5¼ by 2¾ inches in proportions. Spread evenly in pan. Bake in slow oven (300 degrees F.) for one hour. Makes three-pound cake.

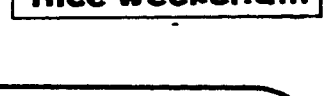
Hartly, Delaware



Bible Institute slated

LANDISVILLE -- A Keystone Bible Institute will be held at the Weaverland Mennonite Church, February 13-17, 1978. The Institute is planned and operated by churches from the Anabaptist tradition. Eight Mennonite, Brethren In Christ and Church of the Brethren conferences are represented on the board of directors. They extend a welcome to the entire Christian community – both pastors and lay persons – to register for any of the classes.

In their 7th year of operation the Keystone Institutes continue to grow. They provide instruction by highly qualified teachers in Bible, church history, and related subjects. Twelve institutes are scheduled for the current season, ten to be held in Pennsylvania, one in New York State, and one in Alabama. Each institute is different both as to instructors and the subjects dealt with.

Bible college credit can be arranged for Keystone courses through Eastern Mennonite College, Harrisonburg, Va., or Messiah College, Grantham, Pa.

Institutes usually provide both day time and evening classes. Persons may enroll for one, two or three courses. Babysitting services are provided at most locations.

For programs and information contact Chester L. Wenger of Keystone Bible Institutes, Box 27, Landisville, Pa. 17538. Phone (717) 898-2251.

Sen. Manbeck to seek re-election

HARRISBURG — Sen. Clarence F. Manbeck (R-48) has announced plans to seek re-election to his fourth term in the Pennsylvania Senate.

The ranking Republican lawmaker said he will campaign on the strength of his record of service to constituents and his demonstrated understanding of the economics of business and politics.

Manbeck is minority chairman of the Senate Transportation Committee and a ranking member of the Environmental Resources Committee.

The 48th Senatorial District includes parts of Lebanon, Berks and Lancaster counties.

Q.
What herbicide combination really controls quackgrass?
A.
Princep plus AAtrex 4L.

Princep® plus AAtrex® 4L. It's the answer to corn acreage infested with quackgrass, because both Princep *and* AAtrex 4L control quackgrass. And that's pretty tough to beat.

Princep plus AAtrex 4L. It's less expensive than the combination you're probably using.

And now Princep is available in liquid form, too, to go along with Liquid AAtrex 4L.

This spring get the answer to quackgrass control. Princep plus AAtrex 4L.

Ciba-Geigy, Ag. Div., Box 11422, Greensboro, NC 27409

Princep plus AAtrex 4L by CIBA-GEIGY

Ladies Have You Heard

(Continued from Page 46)

water added. This results in a lower fat content and more moisture than in process cheese. Cheese food is milder in flavor, has a soft texture, and spreads more easily. It melts more quickly than process cheeses because of the higher moisture content. Like process cheese, it may also contain pimentos, fruits, vegetables, or meats and have a smoked flavor. Cheese food may be used instead of process cheese though it is not likely to yield as much flavor.

Pasteurized process cheese spread has a higher moisture content than any of the products mentioned so far. A stabilizer is used in this product to prevent separation of ingredients. It is more spreadable than most cheeses and may also contain various flavoring materials.

TOMATO CHEESEBURGERS ARE TOPS

The good taste of beef does not necessarily mean porterhouse steak or fillet mignon. Some of the more economical cuts can be transformed into mouth-watering entrees with relatively little effort.

Here is a tip for you busy homemakers desiring to give your families that delicious beef flavor – with economy in mind. Serve tomato cheeseburgers!

The principal ingredient is ground beef, either regular or lean, and the burgers can be prepared quickly and easily.

Needed for the recipe, serving three to six persons (depending on appetites!), are: one pound of ground beef; ¾ cup of cooked or canned tomatoes; 1-¼ cup quick-cooking rolled oats; three tablespoons chopped onion; one teaspoon salt; six hamburger buns; and six (1-ounce) slices of sharp Cheddar cheese.

Preheat oven to 400°F. Mix ground beef, tomatoes, rolled oats, onion, and salt and shape into six patties flattened to the size of the bun. Bake for 10 minutes. Next, open buns, arrange them on a baking sheet, and place a beef patty on one half of each bun. Top with a slice of cheese. Bake for five minutes longer, and serve immediately.

FISH AND LEMONS A NUTRITIOUS DUO

Today, greater emphasis is being placed on foods that have high nutritional value in relation to the calories provided. Fresh lemons as well as most fish fit the bill perfectly.

Pound for pound, fish is one of the best protein foods you can serve, and it is low in calories. It contains only polyunsaturated fat, making it a desirable food for lowering blood cholesterol. Fish has vitamins A, B, D and K, as well as iodine, magnesium, calcium, phosphorus, iron, potassium, and copper.

Lemons, too, share the nutrition limelight for their vitamin C and low calorie count. A medium-sized lemon (size 165, about four per pound) has about 39 milligrams of vitamin C. When you squeeze a fresh lemon wedge (1/6 lemon) over fish, you've added about six milligrams of vitamin C. That same medium-sized lemon has only about 20 calories, so 1/6 lemon squeezed over fish adds a little more than three calories. What a bonanza of flavor for so few calories! Adding to the "C" story (vitamin C and calories) is the fact that lemons have only a trace of sodium, making them an excellent seasoning for persons who must restrict their intake of sodium.

ABOUT LEATHER GLOVES

If you are planning to buy new leather gloves, remember that it is advisable to look for leather gloves that are marked washable or include an instruction insert on care to benefit from the convenience and economy of at-home treatment.

Generally, American-made leather gloves, such as doeskin, calf and pigskin, are washable since the tanning agents – chrome or oil – are soluble in water. Alum-tanned leather, however, is not washable and should be dry cleaned. Linings such as silk, cashmere, acrylic – are also washable.

Once leather gloves are dry cleaned, they cannot be washed. So begin and continue to treat soiled gloves to at-home care.

Although dark gloves don't show soil, they need washing often since they get dirty on the inside as well as on the outside, and because they absorb perspiration. Wash light and dark color gloves separately. Doeskin should be washed off the hands; as a delicate leather, it tears easily when wet. Wash calf, pigskin, and other leathers on the hands. Apply rich warm detergent or soap lather with hand-washing motions, so that each gloved hand washes the other. A washcloth or soft brush is handy for gently rubing areas such as fingertips that may be especially soiled.

When the outside surfaces are clean, reverse the gloves by carefully "peeling" or pushing them off from the cuffs down, and wash them inside. Rinse in clear warm water and squeeze gently; do not wring or twist. Remove excess moisture by blotting in a clean towel. Finger-press gloves while still damp, gently stretching, working and kneading. Dry leather away from direct heat or sunlight. Before gloves are completely dry, work them onto hands to soften and reshape them. If dry, remoisten gloves in a damp towel before refinishing them in the same way.

Acrylics and blends and cotton gloves are generally machine washable and dryable, unless instructions state to the contrary. Wools should be hand washed and allowed to dry flat before stretching back into shape. Do not rub wools; this can cause pilling, matting or shrinking.

Since man-made fiber gloves such as vinyl may be fur-lined for warmth, simply wash the outside with a sudsy cloth. Fur cannot be washed.

Plant lovers' corner

Armchair gardening a Winter activity

DOVER, DEL. – Are you a gardener who feels deprived of your outdoor activity and isolated inside your home during these long Winter months? If so, you can find some real gardening pleasure by turning to the world of garden literature. Here, within easy reach, are horticultural experiences of almost limitless variety, with appeal to every taste and specialty.

There are many sources of literature for the "armchair gardener," points out University of Delaware Extension garden specialist Dave Tatnall. For instance, your local public library should contain numerous books and periodicals on gardening, many of which you can take out on loan.

Bookstores and garden centers usually offer a good selection of garden books. Newsstands also often display popular magazines and paperback books on the subject And one of the benefits of membership in a garden club or plant society is the opportunity to buy special publications–often at a discount.

Garden catalogs arriving at this time of year always make for interesting reading, too. Besides announcing the latest in plants varieties and garden gadgets, many include helpful gardening tips and other basic information.

Another source of reading material which should certainly not be overlooked is the Cooperative Extension Service. Each county Extension office has available both state and U.S. Department of Agriculture fact sheets, pamphlets, and other publications covering a wide range of garden subjects. What's more, they're all available at little or no cost.

Plan to enjoy some of your leisure time this Winter reading a few well-chosen garden books and articles, advises Tatnall. It will also make your outdoor gardening more fun.

Get a jump on Spring gardening

DOVER, DEL. – January has turned out to be a cold, windy, and generally miserable month for home gardeners. Thoughts of warmer weather and planting time are already tantalizing many an avid gardener.

Most of us would like to set out plants or seeds much sooner than we ought to, with normal gardening practices. But there are ways of getting a jump on the season, says University of Delaware Extension vegetable specialist Dr. Michael D. Orzolek.

To minimize the effects of cold soil and air temperatures, he suggests the early bird gardener consider using polyethylene plastic film or mulch to provide protection for some of those vegetable crops normally associated with much later planting dates.

Using a plastic mulch will let you set out your tomato, pepper, eggplant, cucumber, watermelon, cantaloupe and sweet corn plants several weeks earlier than normal–in early April instead of May.

Plastic for home garden use is generally 1½ to 2 mills thick and may be either clear or black. Rolls are sold in various widths to accommodate different crops and uses. Plastic may be used in several ways to reduce damage to garden crops from cold temperatures, high winds, and water stress.

To protect warm season vegetables set out as transplants in April, plastic can be put over hoops of conduit or black polyethylene pipe bent to the width and height

Farmer unrest is sending urgent message

By JOANNE SPAHR

HARRISBURG – As Victor K. Ray, director of field services for the National Farmers Union, sees it, the current unrest among farmers in the country is sending an urgent message to the public. Among the many things the demonstrators are saying is, "Count your blessings, Mr. Politician, because things will never be as good as they are today unless things change," and "We might not be organized, but we're not stupid."

Ray, who does a lot of traveling around the country, and mentally catalogues the changing times, says that history is catching up with this country, and unless something happens, there could be empty shelves in supermarkets around the states in the future.

"With his unrest, the farmer is saying the free market isn't working," states Ray, "and he's saying that "boom and bust" agriculture is not satisfactory."

Victor Ray

The farmers' implicit message, according to the organization official, is that federal loan rates are too low, that international trade is unfair, and that they know the other major grain exporters – Canada, Argentina, and Austrailia – would be glad to up the price in an international commodity agreement.

(Turn to Page 54)

Early life critical to pig survival

DOVER, Del. – A baby pig has three chances out of four to survive through the weaning stage. Three-fourths of those who don't make it die during the first two or three days after farrowing.

With those kinds of odds, it's difficult for a swine producer to ensure that all of his baby pigs will live to the feeder pig stage. But, according to University of Delaware Extension swine specialist Richard Fowler, precaustions taken against allowing the pigs to become chilled will prevent many of these early deaths.

"Records show that baby pigs die because of crushing, scours, chilling, and starvation," says Fowler. "But the key cause is chilling as it can actually bring about the other conditions."

A cold pig is not inclined to eat much and thus could easily starve to death. In addition, a cold pig will lay too close to the sow or move too slowly to get out of her way, thus increasing its chances of being crushed. This cold, stressed pig is also likely to develop fatal diarrhea.

"The cooler the environment, the faster the body heat will flow from the warm pig to the cold air," Fowler says. "Approximately three-fourths of the baby pig's body heat flows to the environment by radiation or convection."

The temperatures of the walls and ceiling determine the amount of heat lost by radiation, whereas the air temperature and air speed determine the amount of heat lost by convection. If air, wall and ceiling temperatures are decreased from 85 to 70 degrees F., the pig's heat loss is two-thirds greater and more milk must be consumed just to stay warm.

In addition, according to Fowler, the baby pig is sensitive to drafts that the human hand can hardly feel.

It's important to make sure the farrowing room is extra warm as the temperature at the pig's level can vary 10 to 15 degrees from the wall temperature five feet higher – where most thermometers are located. Furthermore, the air movement – which is also important – is not measured by a thermometer.

"The baby pigs themselves are a good thermometer," says Fowler. "Any time a pig is curled up rather than laying relaxed or sprawled out on the floor it is attempting to conserve heat. And when you see them huddling or cuddling too close to the sow, it is an indication that they're too chilly."

The farrowing house temperature should be between 70 and 80 degrees F. at the floor level. Supplemental radiant heat can then provide the comfort zone best suited for the pig. Fowler suggests using solid partitions at least one foot high to prevent floor drafts. Also, a box or hover with a lid for inspecting the pigs is a good way to save heat energy.

Pigs given a choice of temperatures ranging from 75 to 97 degrees F. will usually choose the area with the 85-degree temperature, according to Fowler. "The pig's need for this environment diminishes with age," he says. "But the first two weeks in a pig's life are the most critical."

Travel series set at CV

PARADISE – Another in the series of Travel and Adventure programs sponsored by the Paradise Rotary Club will be held today (January 28) at the Conestoga Valley High School, beginning at 7:30 p.m.

Appearing in person to narrate his own film will be Jay Gierkey, a professional photographer. He was chief cameraman for a large motion picture company and has to his credit many television commercials, industrial, and sports films.

In his film "New England: R.F.D.", the cameraman roams through 6000 miles of this colorful and exciting area. He sees lobster fishermen, sailing ships, silversmiths, skiing, and the world's champion sardine packer. Mt. Washington, Mt. Snow, Quoddy Head Light, Sturbridge Village, Cape Cod National Seashore will all be visited as he travels on this all color motion picture junket into some of the richest American heritage to be found.

Tickets for "New England, R.F.D." may be purchased at the door. Price is $1.75 each for adults and $1 students, or a special adult "Six Admission Ticket" for $7.

Melon meeting slated

NEWARK, Del. -- Delaware farmers who grow melons and other vine crops are invited to attend a special meeting on the subject to be held in nearby Maryland early next month. Scheduled for Monday, February 6 from 10 a.m. to 3:30 p.m. at the Preston Lyons Community Building in Preston, Md., the meeting will deal with production problems of cantaloupes, watermelons and pickles.

Delaware extension vegetable specialist Dr. Michael D. Orzolek says that all Delaware growers are welcome to attend the event, which is being sponsored by the Maryland Cooperative Extension Service and supporting agribusiness firms. Those wishing to attend should contact their county agent by February 1, in order to make reservations for the free lunch which will be provided.

Plant Lovers Corner

(Continued from Page 51)

necessary to cover plants without touching them. In effect, this tunnel system gives you a mini greenhouse to speed crops along for early yield. For this purpose you should use clear plastic.

Another way to use plastic to get a head start on the growing season is as a soil-warming mulch laid directly over the ground prior to setting out transplants or seeds. In either case, initial soil preparation and fertilizer application should be done before laying down the plastic.

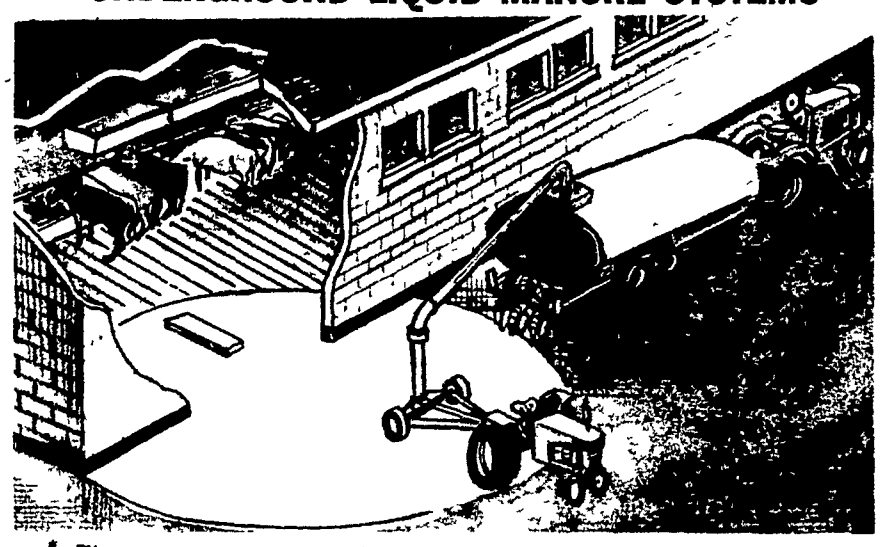
Depending on whether it is clear or black, the polyethylene film will increase soil temperature, help hold available soil moisture, reduce weed problems and also reduce damage from soil erosion, says Orzolek.

Black plastic excludes light from the soil and therefore prevents growth of all plant material beneath it. This means you must punch holes for seeds or transplants that you want to grow there. Clear plastic, on the other hand, transmits light. This light, in combination with high soil moisture, causes excessive weed growth which could outgrow the vegetables. So black plastic is preferable as a mulch, says Orzolek.

The specialist has one caution for those who are using plastic as a growth chamber. Both tunnels and hot caps should have holes punched in them for ventilation as normal planting time approaches, in order to prevent damage to plants from excessive heat build-up. Remove caps and protective plastic tunnels completely by the normal frost-free date for your area.

A combination of plastic film on the ground and hot caps over plants will consistently promote plant growth in April and May for early-maturing crops, says Orzolek. So careful planning for plastic use now could put you in your garden in April and put certain local field-grown vegetables on your table by June.

UNDERGROUND LIQUID MANURE SYSTEMS



* Eliminate manure stacks for cleaner and neater appearance
* Eliminates breeding places for flies and insects
* Eliminates odor with underground manure storage

Maryland Grange meets

HAGERSTOWN, Md. – The 103rd session of the Maryland State Grange met recently in Hagerstown, Md. Rodman Myers of Thurmont, a dairy farmer and member of the Grange for 28 years, was elected State Grange Master at the session.

Other business of the meeting included the announcement of community service award winners. Taking first place for community service was Glade Valley Grange, Walkersville. Their entry will be forwarded to the National Grange session in Greensboro, N.C., for national competition. Other placings included: Dublin Grange, Harford Co., second; Thurmont Grange, Frederick Co., third; Emmitsburg Grange, Frederick Co., fourth; Beltsville Grange, Prince Georges Co., fifth.

Glade Valley Grange also earned the title of Grange of the Year. In second place was Thurmont Grange and third was Hancock Grange.

In Junior Grange news the achievement contest winners were Thurmont, first; Glade Valley, second; and Braddock and Middletown, third.

The junior grange community service award went to Glade Valley, first, and Thurmont, second.

Order issued

NEW YORK – Rendulic Packing Co., a meat packer at Mckeesport, Pa., has been ordered to cease and desist from violating bonding requirements of the Packers and Stockyards Act, the U.S. Department of Agriculture said.

The firm purchases livestock for slaughter purposes in Kentucky, Maryland, Missouri, Pennsylvania, Ohio, Tennessee, Virginia and West Virginia. It has now filed the required bond.

The order, like a permanent injunction, was issued to insure future compliance with the Packers and Stockyards Act. It was issued in default when the firm failed to answer charges filed in an administrative complaint.

Marilyn Althouse recently took over the position of Berks County Dairy Association county coordinator.

Berks Co. dairy coordinator is familar face

WEST LAWN – The Berks County Dairy Association recently appointed Marilyn Althouse to the position of county coordinator, a position left open due to the resignation of Sue Reese, effective the first of the year.

Marilyn is a familiar person to many Berks Countians. She has been active in Extension and 4-H work over the years, and is a member of the Virginville Grange, even though she has not been active in recent years because of her distant residence.

The new position with the dairy association seems to be a natural step for this busy lady who will be responsible for the coordination of Dairy Week. She enjoys working with people of all ages and is especially looking forward to working with the area dairy farmers, since she comes from a rural background, herself.

Presently, Marilyn serves on the executive Extension board and is planning to teach radio communications to interested 4-H members on Saturdays, starting sometime this Spring. This is going to be an experimental pilot project, Marilyn explained, which will probably last seven or eight weeks. All of the details not being worked out at the present time.

Marilyn has several ideas she is eager to try with her new position. She is already making plans to have the dairy princesses appear in local stores to promote fluid milk, since this is where most of Berks County's milk goes. She has many other ideas to bring the dairy industry to the attention of the consumer throughout the year and not just during dairy month.

CONSUMER GUIDELINES

Here are energy saving measures for the home owner

- Insulate floors and attic space
- Weatherstrip windows doors
- Install storm windows
- Set thermostat at low winter setting, wear sweaters, warm clothing
- Close fireplace dampers when not in use to reduce heat loss
- Shut off heat and cooling in unused rooms
- Keep furnace clean/replace filters regularly

Farmers Union delegates set policies, programs

By JOANNE SPAHR

HARRISBURG -- Congregating to approve policy recommendations and action programs for the coming year, 95 delegates from the Pennsylvania Farmers Union met at the Penn Harris Motor Inn, here, on Monday and Tuesday for their 6th annual state convention.

Now 4,164 members strong, the organization needs a little more than 800 members to attain a chartered status - the goal established for the 1979 convention.

At this year's meeting, two counties, Tioga and Bradford, were chartered, with several more in line for the honor next year.

During the two-day convention, several state officials addressed the group, including Pennsylvania Secretary of Agriculture Kent D. Shelhamer, who was Monday's keynote speaker.

Among several "food for thought" concepts which he tossed out to the group was the fact that farmers' net income has dropped, even though a good crop was harvested. At this point in time, the farmer is earning $2.67 per hour – two cents above minimum wage.

And, according to the agriculture secretary, the land boom is now stable, which is not necessarily a positive factor, since in this state of affairs, farmers collateral is lowered when applying for loans.

He also stressed that he does not feel the 1977 Food and Agriculture Act necessarily solves the problem of the farmer, but instead serves to put the agriculturalist in the role of subsidizing consumers.

In later speeches on Tuesday morning, Senator Patrick Stapleton and Representative Paul Yahner told of current agricultural legislation now being drafted which their agriculture committees will deal with in Harrisburg.

Sen. Stapleton, who is on the Senate Agriculture and Rural Affairs Committee, that he endorses the idea of strengthening the family farm because of its efficiency and productivity. Some drafts for additional legislation to keep this concept going include: 1. restricting corporate farms; 2. aiding rural poverty areas such as Appalachia; 3. obtaining school tax revenue from income tax rather than property tax; 4. preserving vanishing top soil; and 5. encouraging young farmers.

Rep. Yahner, chairman of the House Agriculture and Rural Affairs Committee, stated that he does not feel that the threat to family farming is an immediate problem because of the continuing interest expressed by young farmers.

He does see a problem, however, in the continuation of agricultural use of land. For Yahner, the solution is the sale of development rights and not the sale of land, itself.

According to Yahner, legislators are trying to take a responsive and responsible attitude toward agriculture and the farming community.

Policy Recommendations

Chief among the priorities of the two-day convention was the approval of policy proposals. Standing out as a key proposal to the organization was a recommendation that a milk security fund be created in Pennsylvania to protect the dairy farmer from loss of income in the case of financial collapse of his milk dealer. The fund would be used only to repay milk producers for the commodity delivered to dealers who then encounter financial difficulty.

The Farmers Union members also took a strong stand in favor of the development of land use policy which would recognize the need for maintaining land in agriculture for present and future needs and that would define farm land as all land now producing or capable of producing a crop.

A list of the other policy recommendations approved by the delegates follows.

(Turn to Page 88)

Keeping this year's Pennsylvania Farmers Union annual convention running was, left to right, Allen Dieter, fieldman; Scottie Foster, state director; and Albert Mellinger, president of the Lancaster County Farmers Union.

Farmer unrest

(Continued from Page 52)

Not only that, but with the farm debt coming to 118 billion dollars, the American farmer carries over 1/5 of the national debut, while only being four per cent of the population. Even more of an eye-opener is that after World War II, the farm debt only came to five billion dollars.

Ray also said that farmers only receive as much as three cents on a 10-ounce loaf of bread that costs 60 cents. A $2-a bushel wheat increase, he added, would earn the farmer only 1¼ to 1¾ cents per loaf.

Noting that consumers in Denver pay $116 a bushel for puffed wheat in cereal, Ray said, "If we gave them (cereal producers) our wheat, that price would only drop to only $114 a bushel."

The free markets work very well for special interests, he quipped, but not for the farmer, whose prices earn him little over the minimum hourly wage rate in the United States.

"The American farmer is also saying, 'I may be foolish, but I'm not dumb'," says Ray, when it comes to information dispersed by the government on gasohol versus gasoline.

"Gasohol has been used in Brazil for years – it is simply ethanol," explained the Farmers Union official, "the farmer knows that the technique for producing it is well known and that he's getting the run around. Were we to use our grain to produce it, we could lower our surpluses."

And, finally, stated Ray, the farmer has a message for politicians.

"Those tractors mean votes – and you don't win an election with a majority, you win it by a small percentage of votes," he stated.

Free test offered for moisture meters

ALLENTOWN – Any grain grower in Southeastern Pennsylvania can get a check-up on the portable Moisture Meter that he uses on his farm.

Arrangements have been made for the State Department of Agriculture to set-up an unofficial "check station" at the Southeastern Pennsylvania Corn and Soybean Clinic on February 7 and 8. Edward Carpenter of the Bureau of Weights and Measures will make free testing of the meters at the Clinic to be held at the Westover Inn and Golf Club where the Clinic and Trade Show is scheduled.

The Cooperative Extension Service in the Southeastern Pennsylvania counties have arranged for this two-day event – supported by an Advisory Committee of 16 farmers and agri-business representatives.

Programs and registration forms are available at all County Extension Offices. The program will require the two days to participate in it all Over 40 commercial exhibitors will be on display

BOU-MATIC

DAIRY CLEANERS & SANITIZERS

NEW ONE-HALF PERCENT IODINE TEAT DIP

BOU-MATIC ACID CLEANER—for safe, effective removal of all minerals Added to rinse water it will prevent mineral build-up May be safely used on any glass or stainless steel surfaces Recommended for use on all milking machines, pipelines, tanks, etc

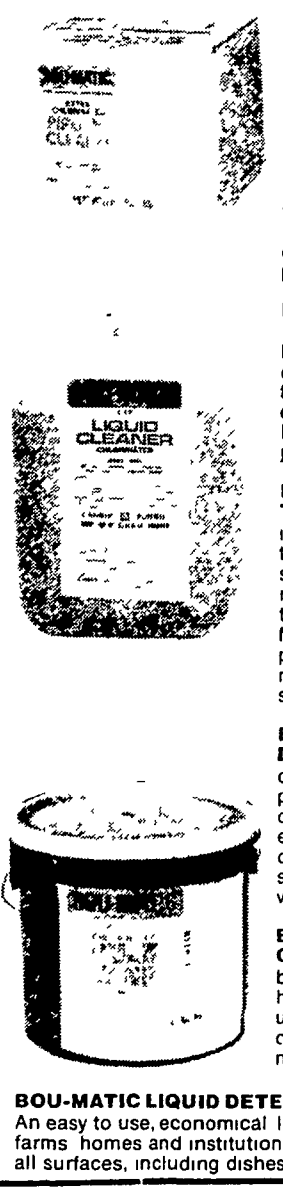
BOU-MATIC ACID CLEANER HEAVY DUTY—Extra strength Acid Cleaner for those HEAVY DUTY jobs

BOU-MATIC TEAT DIP—Kills Staphyococcus Aureue and Streptococcus Agalactiae, the causal agents in the majority of cases of infectious mastitis Not only is it non-staining and non-irritating, but actually soothes because it contains soluble lanolin and glycerin

BOU-MATIC UDDER WASH is a combination product for cleaning and sanitizing food handling or processing equipment It also is an effective udder wash

BOU-MATIC LOW ACID IODINE UDDER WASH—A safe, effective udder wash containing 1 75% available iodine Uses a minimum amount of acid to still give effective sanitizing and yet be less irritating to the teats and udders

BOU-MATIC SODIUM HYPOCHLORITE—Chlorine bearing germicide and disinfectant for sanitizing milk and food processing utensils and equipment



BOU-MATIC PIPELINE CLEANER—A non-foaming, improved, chlorinated cleaner for automatic cleaning of pipelines, tanks, transfer systems and other food processing equipment

BOU-MATIC MANUAL CLEANER—An economical, multi-purpose cleaner for hand washing operations Recommended for cleaning milkers, inflations, tanks, strainers, etc Use on dairy farms in dairy plants and food processing plants

BOU-MATIC LIQUID CLEANER—a liquid, non-foaming, highly alkaline, chlorinated cleaner Highly effective in removing fatty and protein soils from food processing equipment Since it is a liquid, it is highly suitable for automatic injection

BOU-MATIC CHLORINE SANITIZER—A soluble, non-precipitating, stable chlorine sanitizer Contains organic chlorine for increased stability and effectiveness in all pH ranges Contains no calcium salts to leave residues on equipment Not affected by hard water Use any place where a chlorine sanitizer may be used (dairy farms processing plants restaurants, etc)

BOU-MATIC BULK TANK POWDER—A soluble, stable powdered cleaner, chlorinated to increase protein removal capabilities Recommended for manual washing of equipment May also be used on outside of tanks, for cleaning strainers, buckets pails, inflations, valves etc

BOU-MATIC LAUNDRY DETERGENT—A completely biodegradable laundry detergent for use in home washing machines Safe for use on all fabrics and colors Concentrated formula makes it economical to use

BOU-MATIC LIQUID DETERGENT—An easy to use, economical liquid detergent Recommended for farms homes and institutional cleaning May be safely used on all surfaces, including dishes utensils automobiles floors etc

Kendy's Kollumn

by Kendace Borry

Once upon a time there was a group of 4-H'ers who hounded their leader to go on an overnight trail ride. For a long time their leader wisely ignored them, but they finally outsmarted her and an overnight trip was planned. And it came to pass that saddle bags were packed, horses saddled, and lo, the morning of the great adventure ten hardy pilgrims departed for the mountains dragging along their grumbling leader.

Now it seems the god of trail riding was in a bad mood that day for he did sorely test those brave souls who ventured out into the wilderness. And it seemed that he was particularly angry with the leader for he created problems that drove her to think she lost her mind. Before the ride was over, he sent millions of bugs to fly around her head. He inspired an overfed horse to eat the last loaf of bread while she tried to catch a quick nap, and he convinced a sweet 4-H'er and her faithful pony that a stream is a terrifying thing to cross and never to be attempted. And woe unto her, he even schemed to have the 4-H'ers eat all the cookies that they brought along knowing that their leader needs cookies to survive on a trail ride.

Soon it was night and the brave campers were spread over a hillside preparing to sleep. At the foot of the hill, the by now very tired and grouchy leader rolled out her sleeping bag. With her at the campfire was one 4-H'er, the oldest one along, in this story she'll be known as Cinderella. Cinderella, as a senior member, was expected to know what was happening. She had had a bad day too, developing all the symptoms of a cold, and having lots of arguments with her horse about running into trees. She was ready for a nice, long, relaxing sleep.

Poor Cinderella! The first thing she noticed when she lay down was a slimy salamander sharing her pillow. Within seconds she was on top of the leader's sleeping bag, jumping up and down, screaming about the monster. The cowardly salamander ran. Cinderella spent the next 45 minutes looking for bugs. The leader spent the next hour removing footprints from her body.

Finally things settled down. Everyone again tried to sleep But now Cinderella decided she had a fever and should be home in her own bed -- without bugs She awakened her leader and informed her thus. Her leader carefully considered the fact that they were miles from civilization and told her to take two aspirin and call her in the morning

Now it seems one of the other pilgrims camping up further on the hillside had a problem. She imagined things -- things like ghosts, goblins, and people who would eat her up. She decided to go get her 4-H leader to protect her, but on her way there she fell on top of Cinderella who by now was hiding in a lump at the bottom of her sleeping bag. By the time the howling and screaming was over, half the camp was on the scene, sure that they were being attacked, and the leader was positive it was a Communist plot to drive her crazy.

Both leader and Cinderella had flashlights so the fearless leader lent hers to the pilgrim and sent her, along with the other arrivals, scouting back up the hill. For half an hour they did not return and Cinderella spent the whole time relating all the things that she imagined could have happened to them. Finally the leader decided to investigate and dragged Cinderella out of her sleeping bag and the two of them set off up the hill.

Halfway up the hill Cinderella's flashlight burnt out. For the next 20 minutes she and her not so noble leader floundered on, hitting 53 trees before finally falling over occupied sleeping bags at which time panic again ruled.

When everyone untangled and realized that there wasn't an invasion the leader begged for her flashlight so that she and Cinderella could make it down the hill alive. Hark! That flashlight too had lost its shine from being overused chasing ghosts. So brave Cinderella and the grouchy, muttering leader departed into the dark, holding hands to make sure they wouldn't lose each other. Cinderella was sure camp was due east, the leader due west. Camp was found in a southerly direction an hour later.

The rest of that short night Cinderella spent waking her leader every fifteen minutes to inform her that the fire was going out. It never dawned on her that she was just as close to the wood pile as anyone else.

Finally morning came and the troops departed for home. The old homestead at last loomed on the horizon and the journey was over. The pilgrims headed for their long lost soda pop and TV sets, wondering whose idea such a trip was anyway.

As for the leader? There's hope that she may recover her sanity. But if you want to see her turn into a nervous wreck, just mention the words "overnight trail ride".

3 Weaver employees move up

Dwane L. Hostetter

Jay L. Hollinger

NEW HOLLAND – Jay L. Hollinger, 5890 Pine Street, East Petersburg; Glenn E. Esbenshade, 11 Fulton Street, Akron; and Dwane L. Hostetter; New Holland R3 have been named to new positions within the sales department of Victor F. Weaver, Inc., New Holland.

Hollinger has been promoted to the position of refrigerated foods sales manager. In his new position he will be responsible for directing sales, marketing, and promotions related to Weaver luncheon meat product lines and Weaver chicken hot dog products.

Esbenshade has been appointed to the position of frozen foods sales manager. In his new position he will be responsible for directing the development, sales, and marketing plans for Weaver fried chicken and Weaver Dutch Entree product lines.

Hostetter has been named to the position of frozen food sales manager. In his new position he will be responsible for directing the development of sales and marketing plans for Weaver fried chicken product lines and Weaver Dutch Entree products.

DISTRIBUTOR OF CENTRAL TRACTOR PARTS CO.

The Tractor Specialist sells more "up-time"

case

When the land is ready, a farmer's tractor had better be ready to go That's why a Case dealer franchise just makes good common sense

As a Case dealer you're a tractor specialist Everything you do — selling servicing parts — has one target the best in farm power You and your tractors are backed by an industry "first' a sound marketing program Assured Availability It tells your customers that if, for any reason during warranty the tractor they bought from you isn't ready to go, they'll have a free replacement And Case backs you up!

Case backs you up with other strong marketing help including the Demo/Rental and Commitment to Quality programs

If the franchise is open in your territory you may also be eligible to sell and service light construction po[illegible] For information on the full potential of a Case franchise in your area write or call

YES, WE FEED THEM ALL AT BROWN'S

And behind every bag of BROWN'S FEED is sound NUTRITION . . . NUTRITIONAL KNOW HOW. We continually strive at BROWN'S for improved feed efficiency, growth rate, finish, production and performance in every class of livestock we feed. FEED QUALITY COMES FIRST AT BROWN'S.

WHY ARE MORE PROGRESSIVE FARMERS FEEDING BROWN'S?

Because they want to make more milk, more eggs, more beef, more pork . . . and at a greater profit over feed cost. At BROWN'S, the FAMILY FARM is foremost on our minds. We want him to run a profitable operation. We are a local company. We do not contract eggs, broilers or livestock. We sell our feed and services at competitive prices. We feel we have more interest in the local, independent farmer than most others.

WE HAVE THE FEEDS, PROGRAMS AND TECHNICAL SERVICE TO HELP YOU.

Farmix appealed to a supreme court, and won.

More than 10,000 hogs served on the court. And the trial lasted over four years. The verdict: Farmix swine feed concentrate was proved far superior on all counts: swine performance, carcass leanness, cost of gain.

What clinched the case for Farmix? In brief: research probed far beyond the measure of crude protein levels used by most swine feed manufacturers. Rather, Master Mix Research redefined the requirements of swine for essential amino acids. The objective was to proportion amino acid intake according to the hog's needs for fast, efficient daily gains.

Next, Master Mix evaluated the various feedstuffs to identify amino acid availability and the lowest cost combination that would deliver the required amino acid pattern.

The country's highest court-market hogs themselves bore witness to faster rates of gain. Improved feed conversions. Lower feed cost.

Then all last year leading swine producers weighed the evidence, and came to a unanimous decision. Farmix really works. It's inexpensive and versatile. And helps build healthier bottom-line profits.

Why not be the final judge. Give Farmix a fair trial on any grounds you choose. See your Master Mix representative. Or write Central Soya Domestic Feed Division, Fort Wayne, Indiana 46802.

A Master Farmer

The Vanderwendes make farming a family affair

By JERRY WEBB
Agricultural Editor
University of Delaware

BRIDGEVILLE, Del. – A Sussex County, Delaware farmer was recently selected as one of six master farmers in a program sponsored jointly by the Pennsylvania Farmer magazine and the Cooperative Extension Services of Pennsylvania, Delaware, Maryland, New Jersey and West Virginia. A plaque was presented to William W. Vanderwende of near Bridgeville in ceremonies at the recent Pennsylvania Farm Show in Harrisburg.

Vanderwende joins a select list of about 300 farmers who have earned the honor since the program began in 1927. He is the first Delaware farmer to receive the award since 1931.

Guidelines for the competition indicate that a master farmer award recipient must be above average in farming ability and be a financial success. The person must also be a leader in community and allied farming association, a church member and one who has a useful and rewarding family circle.

Vanderwende appears to meet the criteria on all counts -- a successful businessman, extensive community involvement and a family that includes a wife, three sons, one daughter and two daughters-in-law, all involved in the family farming operations.

The Delaware master farmer's success story starts out like that of many young men who went into farming in the early 50's. Right after graduation, he married his high school sweetheart, Ellen Draper. He worked for his father, who was a tenant farmer, for a few months and saved some money until he could rent his own place. With less than $1000 in capital, he rented an 80-acre farm and with eight cows–four of his own and four rented–he went into the dairy business. That was in the Fall of 1952.

By year's end, it became obvious to this young couple that the farm wasn't going to bring in enough income to support them, so Bill took an off-farm job, leaving his cows in the care of his father.

Nine months later, the Vanderwendes made a very difficult and crucial decision. "I made up my mind early in life," Bill says, "that I wasn't going to work in town and farm as a sideline, so I told my wife that Fall I was going to quit my job and try to farm full time. I said if I couldn't make it farming, I'd quit and get another job someplace."

So it was back to the farm and the dairy cows and the slow process of converting that meager beginning into what is today a 2200-acre farming operation and a 220-cow dairy herd "From that we've just tried to keep plugging and take advantage of every opportunity that comes along and try to make a profitable operation," he says.

Calf raising isn't a neglected part of management for the Vanderwendes of Delaware. Here Bill Vanderwende inspects some of his calves in the specially designed calf barn.

From that first rented farm the Vanderwendes moved to a 120-acre rented farm, purchasing it two years later. Along the way they've added 1280 more acres to their holdings, built a modern milking parlor and herd-handling facilities, raised four children, built a new home and made countless improvements and refinements in the operation.

Asked to highlight what is unique about his farm business, Bill replies, "I thought I was doing just about what any good farmer would do. You try to raise a family and make a good living for them and develop something that you can be proud of plus be active in your community. I didn't think I was doing anything that any good farmer wouldn't do."

One of the Vanderwendes' goals at Dutch Ayr Farm has been to provide farming opportunities for all the children when they were ready for it. So far the three sons have accepted their parents' offer and the daughter is enrolled in the Agricultural College at the University of Delaware. "I think getting the family involved has been a great asset to me," Bill says. "Our children have always been interested in farming, very active in 4-H and FFA and I've tried to give them responsibility at a young age and some financial rewards for their efforts. I think that's probably the reason that all three boys and even the daughter are today interested in agriculture."

The oldest son, Dan, now 25, majored in animal science at the University of Delaware and upon graduation returned to the farm to take charge of herd development. He has since bought a 120-acre farm near the home place and he now owns 45 cows in the Vanderwende herd. Dan and his wife Becky have two children.

The next son Douglas, 21, attended Georgetown Technical and Community College for two years and has returned to the farm where he specializes in crops production. He and his wife Debbie, a University of Delaware animal science graduate, own a small farmhouse and a 24,000-capacity broiler house.

Jim, 19, who graduated in 1976 from Woodbridge High School, decided to skip college and is already active in the farm operations. His main responsiblity is raising replacement animals for the herd. Jim owns 10 cows in the main herd and, together with brother Doug, owns a 116-acre farm.

Daughter Carla, 18, is a freshman at the University of Delaware, majoring in agricultural economics. Although her future plans are not final, Bill feels there will be a place for her on the farm if she wants it.

Currently the Vanderwende farming enterprises function with only a verbal partnership agreement, but the next step will be a formal corporation for the main farm business with each son retaining sole ownership of his individual enterprises. Four cash rented farms, including 500 acres of cropland, are operated jointly with income and expenses shared equally.

Bill feels the experience of working together on the various farm enterprises has given them all an opportunity to be sure they are doing what they really want to do and to show that they can work together before a formal corporation is established.

Dutch Ayr Farm is devoted primarily to corn and soybeans with some acres reserved for pastures and alfalfa hay. Last year's production included 800 acres of corn for grain and 150 for silage, 700 acres of soybeans, 120 acres of alfalfa, 100 acres of pasture, 165 acres of wheat and 45 acres of barley. A major part of the production goes into cattle feed but in good years, corn and soybeans are sold on the cash market.

The Vanderwende dairy herd is all Holstein, mostly registered and high-producing with an annual average of almost 17,000 pounds of milk per cow for 220 cows in the most recent test period.

The Vanderwende family is involved in a long list of community and farm organizations. Both Bill and Ellen have served as 4-H club leaders and are active in 4-H Links, the statewide 4-H alumni organization. Bill is a member of the Woodbridge School Board, the Governor's Advisory Council on Agriculture and the Bridgeville Kiwanis Club. He is or has been a director or officer of the Delaware Farm Bureau, the Delaware Council of Farm Organizations, Interstate Milk Producers Cooperative, Delaware Dairy Herd Improvement Association, Delaware Council of Farmer Cooperatives, Delaware Holstein-Friesian Association, the Delaware State Fair and the Sussex County Soil Conservation District Supervisors. The Vanderwendes belong to the Church of God in Bridgeville.

Watershed asso. meeting set

RAWLINSVILLE – The Martec Hills Watershed Association will hold its annual meeting January 30, 7:30 p.m. in the Martec Township Elementary School, Martic Heights Drive, located west of Rawlinsville.

Steve Huber, from the Lancaster County Conservation District will be the speaker for the evening. There will also be an election of officers. The public is invited to attend.

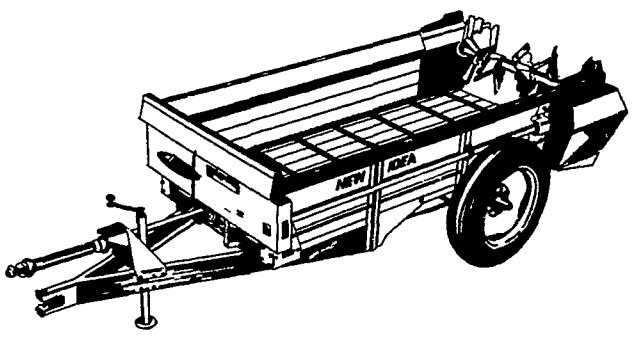
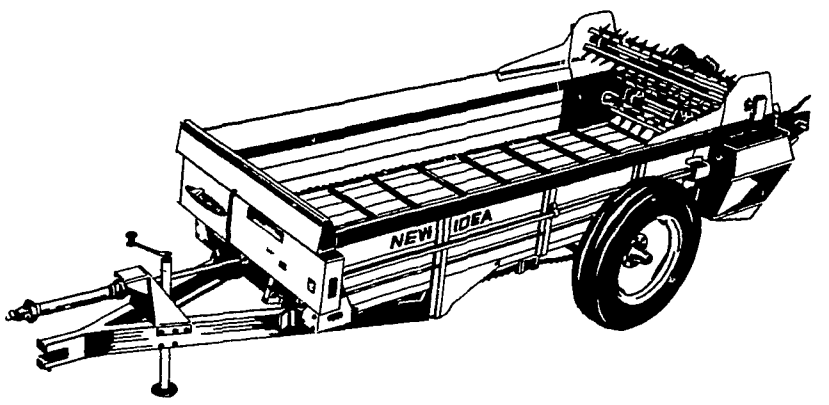
SPREADING MANURE COMES IN ALL SIZES

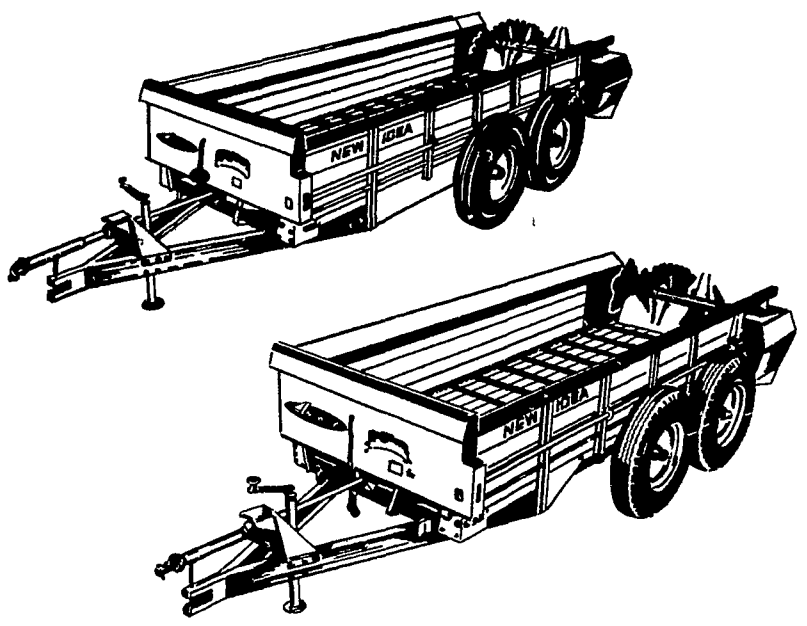
Avco New Idea's eleven PTO spreader models are designed to give you time-saving performance, year in, year out! Whether you use a 138-bushel spreader or a 365-bushel 10-ton spreader, you can be assured that the rugged dependability is there to get the job done. Slice it, shred it, and spread it far and wide with the spreaders that are built to handle big loads.



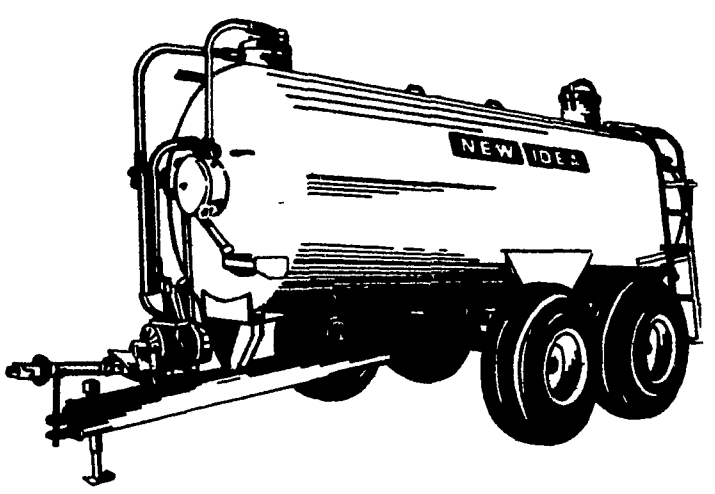
Single Beater Spreaders
Available in five sizes with extra thick paddles designed to slice, shred and spread. Optional endgate for sloppy loads.



Cylinder-Paddle Spreaders
Ten rows of blade-like, triple-staggered teeth to shred fine and spread wide. "The Widespread" has the quality features you need, in three popular sizes.



8½ and 10 Ton Spreaders
Today's bigger farms need bigger equipment to speed the work, and New Idea's 8½ and 10 ton models get the big jobs done fast. Both are engineered and built to stand up under the demands of hauling and spreading their huge payloads over the roughest fields, with a minimum of maintenance.



Liquid Spreaders
Handle livestock manure the labor and pollution reducing way. Choose from four sizes, from 800 to 2100 gallon capacities. Add the optional plowdown attachment for soil injection to prevent odor and runoff.

where the whole idea means better performance

Lebanon COUNTY DHIA MONTHLY REPORT

DECEMBER 1977

Marvin Meyer is the owner of the high producer for lactations completed last month, according to DHIA data released this week. Meyer's, Gail, a 7-year old Holstein, pumped out 28,445 pounds of milk with a 3.7 per cent test and 1041 pounds of butterfat. She had the high score for both milk and butterfat.

The infant death rate in the U.S. is higher than in 16 other nations, reports The National Foundation-March of Dimes. Health officials feel the rate could be reduced by one-third if every woman were to receive high-quality medical care early and throughout pregnancy and during labor and delivery.

Calf management meeting slated for Lancaster County

LANCASTER – Donald Ace, Extension dairyman from Penn State, will be the featured speaker at a "Calf and Heifer Management" program scheduled for January 31, at 7:30 p.m. in the Farm and Home Center, here.

This Lancaster County Cooperative Extension Service sponsored program will focus on the many problems involved in raising dairy herd replacements. Persons attending this program are encouraged to ask questions particular to their management program.

The program was previously scheduled for January 17, 1978 but heavy snow forced its postponement until January 31, 1978. All interested persons are invited to attend.

Dam's Sire: Forest Lee CENTURIAN Rocket EX-91 GM
Former ABS sire 29H1830 +630PDM

Preliminary information on this fine pedigreed ELEVATION son looks very encouraging. Height and Width of Rear Udder, Stature, and Rear Leg Set are well above average. Fore Udder, Center Support, Teat Placement, Teat Size, Strength and Capacity, and Width of rump are average or slightly above. To top off the type information, daughters are milking well over the 18,000 lb. level.

We expect MARS to get even better. The reports keep coming in about his daughters doing the kind of job it takes to pay their way. ELEVATION is now a bull of the past. Contact your AMERICAN BREEDERS SERVICE REPRESENTATIVE for complete details on a bull with an unlimited potential. MARS the ELEVATION son with a great future.

Farmers Unions policies

(Continued from Page 54)

PENNSYLVANIA FARMERS UNION 1978 STATE POLICY RECOMMENDATIONS

COMMODITY PROGRAMS

Present Policy

We recommend that the Milk Marketing Board be more responsive to the needs of all dairy farmers.

We recommend that dairy sanitation regulations should be properly enforced, both before and after milk leaves the farm to ensure quality. The responsiblity for the enforcement of these regulations concerning milk should be in the respective states' department of agriculture, sanitation division, at the point of sale.

1978 Resolutions

We recommend that labeling of cheese include ingredients, amount of each ingredient, and point of origin.

Whereas we realize that the present bonding law requirements do not guarantee payment to all dairy farmers for all the milk they have sold to dealers; and whereas the marketing of milk requires dairy farmers to extend up to 55 days credit to dealers of milk, we therefore recommend legislation be enacted providing for a producers security fund that will protect dairymen producing milk in Pennsylvania; except dairymen who are members of and selling milk through their co-operative, against loss of payment for milk because of defaults by purchasers.

We recommend a producers security fund be established by contributions from both producers and dealers, the contributions however not to exceed one cent per hundredweight from each, until the fund is equal to the value of the milk purchased by the largest dealer in his highest 60 day period.

Contributions to the fund shall cease when this amount is reached and shall not be resumed as long as the fund remains at or above this amount.

New producers would contribute in the same manner and for the same number of months that dairymen contributed to the fund when it was first initiated. The fund shall be invested in interestbearing accounts and shall be used only to pay producers for milk delivered to their dealers who defaulted in payment either through bankruptcy or otherwise.

CONSERVATION

Present Policy

We recommend a change in the Pennsylvania Game Law which would allow farmers to keep deer killed because of crop damage, whether the land is posted or not.

We recommend a change in the Pennsylvania Game Law which would allow the hunting, for at least two days, of hen pheasants in counties where they are considered as pests.

We recommend an expanded agricultural conservation program, with cost-shares at a minimum of 75 per cent on all practices mandated by the Soil Erosion Sedimentation Act or Environmental Protection Agency.

We recommend an investigation be made by the Pennsylvania Department of Agriculture into the sale of thistle seed as bird feed and, if the seeds are viable and the plants resulting would be a problem to farmers, we urge an immediate halt of their sale.

1978 Resolutions

We recommend that a state law or regulation be adopted to control Johnsongrass. All landowners, including state agencies, should be responsible if any Johnsongrass on their property is allowed to mature to seed.

We recommend that the Forest Service, Extension Service, and all other agencies be allocated adequate staff so that the need for hiring outside consultants, who would charge farmers for the services usually performed

Efficient manure handling that can generate extra income.

It's TRU from Surge.

If you're a dairyman, check out the rugged, new TRU manure handling system from Surge

The TRU converts raw dairy manure into two valuable, easy-to-handle by-products. A high nutrient liquid fertilizer, and a low-moisture, near-odorless solid that can be used as a source of quality bedding or sold as garden mulch.

Incoming manure is agitated in a process pit beneath the TRU The agitated slurry is then pumped through 4 sets of pressurized rubber rollers and perforated steel drums to separate solids from the liquids The solid has the consistency of commercial peat moss The liquid contains approximately 85% of the fertilizer value, and because of its water-like consistency can be easily transferred to a lagoon or field with no further agitation

With a 100 cow herd, the TRU could easily convert a messy, smelly problem into $5000-$8000* worth of high nutrient fertilizer, plus 36,000-54,000 cu ft of quality bedding or saleable soil conditioner per year

For more information call us today

*Manure production per animal and manure nutrient values will vary based on animal weight, feed ration, and methods of manure handling

We can make your cows worth more.

Young Farmers' convention planned for Feb. 8-9 in Lancaster

LANCASTER – Pennsylvania Young Farmers will hold their annual Winter Convention on Feb. 8 and 9 at the Host Town Motel, here. Members who are interested in attending are urged to send their room reservations to the motel by Feb. 1.

Pat Leimbach, a farm wife from Vermilion, Ohio, will be featured on the opening day of activities with her story telling. She, her husband and three sons run a fifth generation vegetable, potato and grain farm. A columnist and author, she encourages women to be involved in agriculture She'll be speaking at the Wednesday evening banquet.

According to PYFA president Richard Hoppes, the convention activities will also include educational program, displays, special entertainment and the recognition of outstanding achievements. Theme of the program this year is Farmers Strive to Keep America Alive.

Following is the complete schedule of activities:

Wednesday, Feb. 8, 1978

9:00-12:00 Registration
9:30-11:30 Executive Committee Meeting
12:00-4:00 Lunch and Tour
New Holland Machine Plant and Museum
Lunch and Transportation - Courtesy of Sperry New Holland
4:00-6:00 Interview - Officer Candidates
4:00-6:00 Spokesman for Agriculture - Speaking Contest
6:30 Open Banquet - Speaker - Patricia Leimbach - Entertainment - Surprise

Thursday, Feb. 9, 1978

7:00 Executive Committee Breakfast
8:30-10:30 Registration
9:00 Educational Program – Why Belong to PYFA?
9:00 Foundation Meeting
10:30 Business Meeting
12:00 Lunch – Speaker - Mr. Grover Gouker, Head of Lancaster Dale Carnegie Courses
2:30-3:30 Business Meeting Continued
4:00-5:30 Educational Workshops
I. Electricity – Friend or Foe
II. Partnerships, Corporations and Sales Agreements
III. Solar Handyman
IV. Soil Compaction and Tillage
6:30 Convention Banquet
Entertainment
Awards

Friday, Feb. 10, 1978

8:00 Executive Committee Meeting
9:00-12:00 Officer's Training – Harvey Smith
12:00 Lunch
1:00-2:00 Business Meeting
2:00 Adjournment

LADIES PROGRAM

Wednesday, Feb. 8, 1978

9:30 Officers' Wives Meeting
12:30 Tour – Amish Farm and Home, Wax Museum and Dutch Wonderland Gift Shop
6:30 Open Banquet

Thursday, Feb. 9, 1978

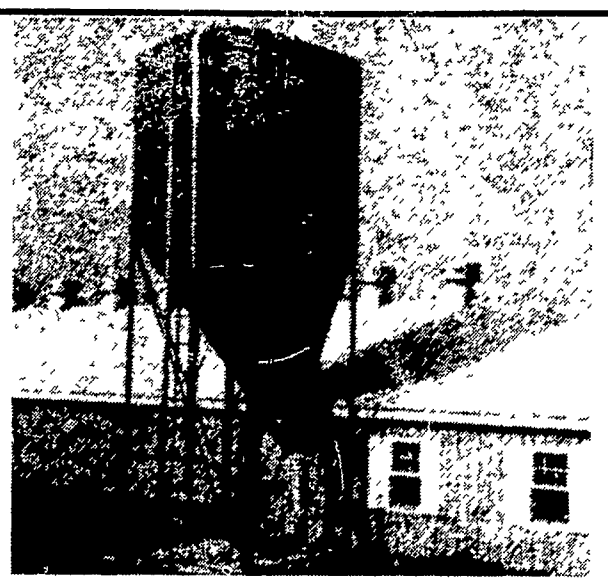
Craft Display Throughout the Day
10:00 Lecture on Pa. Dutch Style Cooking - Mrs. Groff
12:00 Luncheon
2:00 Flower Arranging – Mrs. Oberholtzer
6:30 Convention Banquet

Labor bill draws fire

ARLINGTON, Va. – In a letter this week to members of the Senate Human Resources Committee, the Poultry and Egg Institute of America Executive Vice President Lee Campbell expressed the Institute's strong opposition to S. 1883, the Labor Reform Act, stating it is not the federal government's role to aid union organizers and urging that they not report the bill out of committee.

Campbell, speaking on behalf of the national trade association representing all facets of the poultry and egg industry, protested the bill, which would enlist the help of the federal government in union organization and which would stifle business' right to resist such organization. Campbell told the Committee that it was "not the function of the Federal government to come to the aid of union organizers faced with a declining membership... there are features of the bill that would so intimidate employers that they would lessen, if not totally eliminate, their resistance to unions."

One provision of S. 1883 calls for a vote on union representation in as little as 15 days following a union vote demand. Such quick elections, says Campbell, "Do nothing to protect the right of employees to make a free and informed choice."



CUSTOM MADE FEED BINS

THANK GOODNESS! ALL THE CONFUSION IS BEHIND US! WE ARE NOW IN OUR NEW FACILITIES AND FULLY OPERATIONAL!!!

NOW IS THE TIME FOR OUR . . .

GRAND OPENING

3 BIG DAYS — FEB. 13, 14 & 15, 1978 — DON'T MISS IT

TOYS PRIZES REFRESHMENTS GREAT DEALS

Stop in and see how we can serve you now better than ever! See why we are better equipped and more experienced! See why M & R is more in tune to meet your needs!

DURING THESE THREE DAYS WE WILL BE OFFERING THE FOLLOWING DISCOUNTS:

OVER THE COUNTER IH PARTS

- 10% cash discount — across the board!
- Up to 30% cash discount on many plow parts!

USED EQUIPMENT

Big Savings . . . Don't Be Afraid — MAKE US AN OFFER!!!

All of our new equipment is at 1977 prices!

PLUS A SPECIAL BONUS

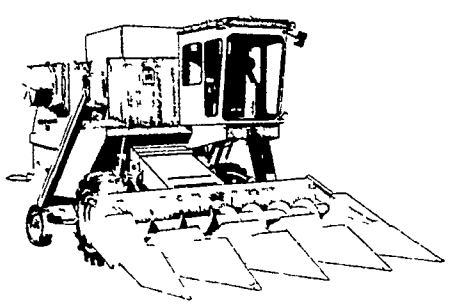
Any CASH parts purchased during our grand opening amounting to $200 or more (after discount) qualifies you to receive a 10% CASH discount on ALL of your IH over the counter parts purchases until . . . JUNE 1, 1978.

EXCEPT ITEMS ORDERED ON AN EMERGENCY BASIS

On Feb. 15, 7 p.m. we will hold a special meeting to introduce you to the AXIAL-FLOW COMBINES and other equipment.

Refreshments Will Be Served.

M & R invites you to bring the family and meet all of parts, sales and service personnel. See how years of experience + improved facilities + a genuine desire to serve = M & R!!



SEE YOU THERE!

Remembering how it used to be

Harvesting methods varied in Pa. 40 years ago

EDITORS NOTE: The following is the fourth in a series of articles written by contributors to Lancaster Farming with the goal of providing a written and pictorial record of farming a generation or two ago. This particular article was written by Marshall Jones, Westtown, Pa. Jones has been farming for 45 years and is interested in antique farm machinery.

We at Lancaster Farming would like to write about old equipment, traditions, and methods. Let us know, please, what you have to offer. Readers may send their material in if they wish, as was the case with the following article. Or, if the reader prefers, one of our staff members will visit your farm and write a feature article. We thank you for your interest and assistance.

WEST CHESTER – Since farms have become fully mechanized in the past 30 to 40 years with huge tractors, combines, and haymaking equipment, harvesting methods have become standardized in all sections of the country.

However, before that time, when harvesting was done with animal and manpower, crops, especially corn, were harvested in many different ways throughout different states and even within different counties in Pennsylvania.

In the mid-western corn belt, the corn was husked by hand from the standing stalks and thrown against the "hang board" into a horse drawn wagon which kept pace with the pickers or huskers as they proceeded down the corn rows.

When I was a student at Penn State 50 years ago, I noticed the corn stalks in Mifflin County were cut off just above the ears as soon as it was mature. I never knew the reason for this, but perhaps some of the older readers of **Lancaster Farming** in that area can give an explanation.

In Chester County practically all the corn (except for silage corn) was cut and shocked in September and husked by hand in October or November. If I remember correctly, there were about 100 shocks to an acre. When husked, each shock was tied in two bundles and tied with tarred rope (a mice and rat repellent) and placed in large shocks to be used as livestock feed and bedding during the Winter.

We were always busy with potato harvesting at that time of year, and corn harvesting was done by extra help. I think we paid three to five cents for shocking and eight to 10 cents for husking each shock. Of course, corn was planted at about half the population per acre that it is today for mechanical harvesting.

On the eastern shore of Maryland between Queenstown and Easton, there is a large island which contained six farms of a few hundred acres each. It is and was known as Paca or Wye island. (Two-hundred years ago, Mr. Paca was one of the signers of the Declaration of Independence.) The island is between Wye river and the bay. A friend of mine lived on the farm nearest the wooden draw bridge, and his father was the offical bridge tender.

When he heard a signal from an approaching boat, he stopped his farm chores and went to the bridge to raise the draw span with a hand crank. Each farm consisted of four of five large fields, one of which remained idle or fallow each year.

Nearly 40 years ago, I kept a motor boat by the bridge one Summer and Fall and, along with enjoying weekend cruising on the river, I had a chance to observe different farming methods in the area.

The farmers there had some tractors – the most popular was the International Farmall F 20, a two-plow tractor. However, most farm work was done with animal power.

On Sundays, one could see as many as 20 horses and mules turned out to pasture on some farms.

The Wye farmers had a method of harvesting corn that was different from any I had ever seen. After 40 years, my memory is somewhat hazy on that method. Perhaps some of **Lancaster Farming** readers from that area can elaborate on that method.

As I remember it, at harvest time a horse-drawn triangular corn sled with a sharp knife on one side was pulled along the corn row. The knife cut the corn which the driver dropped on the sled. When it was loaded, he tripped a lever which dropped the load on the ground.

Other help carried the corn some distance to the side where it was shocked in rows perhaps 100 feet apart.

The cleared ground was immediately planted to wheat, and then the corn was husked by hand.

Wheat harvest was more or less standard everywhere. The wheat was cut by a reaper and binder pulled by two, three, or four horses, depending on the size of the machine.

This machine was invented about 90 years ago, and the knotter used to tie the sheaves is similar to the knotter used on pick-up balers today.

After the wheat was cut, the sheaves were stood up in round shocks of 10 to 12 sheaves with two sheaves on top to act as rain caps.

Lancaster County Amish still use the same method, except that their shocks are long and narrow with no caps.

As soon as the shocks were dry, the community threshman came with threshing machines and steam traction engines. The farmer supplied coal and water for the steamer and fed the hungry crew.

Excessive rain in 1919 caused the cap sheaves to sprout, and the shocks took on a green color.

The contest was held at the Pa. State Farm Show.

Fast protein test developed for wheat exporting centers

NEW YORK, N.Y. — Official rapid testing for protein content in hard red Winter and hard red Spring wheats is planned at export inspection points by May 1, a U.S. Department of Agriculture official said recently.

N. Gail Jackson, standardization director for USDA's Federal Grain Inspection Service (FGIS), said a $1.1 million contract has been awarded to supply 95 near-infrared instruments which will make the rapid testing service possible.

"These new instruments will enable workers to perform a protein test in about two minutes, compared to about two hours required under the method now in use," Mr. Jackson said. "The new faster technology means we will be able to test sublots as wheat is loaded onto a ship and obtain a shipload uniformity that has been impossible in the past."

Lack of protein content uniformity within a given shipload of wheat has been a common complaint from foreign grain buyers. Official testing for protein is now offered only on a composite sample basis at export elevators.

Auto Service Tips

Salt and chemical compounds used on roads in snow areas contribute to the problem of car rust. Automobile owners in these areas should keep their car clean, washing all surfaces, particularly the underside, at periodic intervals.

Farmers Union policies

(Continued from Page 88)

by these urgencies, is kept to the minimum.

We recommend that the funds contained in the Federal Water Control Act of 1977 for non-point source agricultural pollution be administered by the ASCS county committee system in the ACP programs.

We recommend that at least two farmers be appointed to serve on the State Game Commission to help express the farmers' viewpoint of farm problems caused by game regulations.

We oppose any state or federal legislation that would outlaw the use of leghold traps.

We oppose protection of blackbirds, crows, English Sparrows, starlings, and grackles.

We recommend that the Game Commission stop distributing multiflora rose plants to cooperators.

We support S.B. 743, Flood Plain Management Act, as originally introduced.

We support HB 104, Agricultural Authority Development Act as amended by House Agriculture Committee December 7, 1977.

We support S.B. 744, the Storm Water Management Act.

COOPERATIVES

Present Policy

We oppose any attempt to change by legislation or regulation existing cooperative laws if such changes will destroy, weaken, or hinder the operation of cooperatives.

CREDIT

1978 Resolutions

We oppose the P.A.C.E. concept of dealer financing and recommend that an investigation be made of the procedure.

ENERGY POLICY

Present Policy

We favor legislation such as House Bill III that will prohibit the condemnation of prime farmland for certain purposes unless a committee composed of the state planning board, the dean of the college of agriculture, the Secretary of Agriculture, the Secretary of DER, and two active farmers appointed by the governor determine that there is no prudent or feasible alternative.

We oppose throwaway and other non-returnable containers.

We urge our legislators not to allow Pennsylvania to become a primary supplier of electrical energy for other states in the Northeast. We recommend that the DER or other independent energy consultants evaluate the power loss on transmission lines when selecting site locations for electric power plants so that efficiencies can be realized. We request a re-evaluation of projected energy needs with emphasis on conservation before planning and constructing new energy sites. We oppose the energy park concept of a cluster of nuclear plants, coal-fired generators, or a combination of both, and recommend that generating plants be built where the need for power exists so that no one community is burdened with all the problems and few of the benefits.

1978 Resolutions

We oppose the construction of super power high tension transmission lines.

GOVERNMENT REGULATIONS

Present Policy

We favor protection of land owners from claims of damage made by invited or uninvited persons regardless of trespass notices.

We are opposed to government by regulation when the regulations are drafted by bureaus and agencies such as DER and are adopted and implemented into law after publications in the **Pennsylvania Bulletin** or **Federal Register.** We recommend that regulations affecting a farm operation be subject to review before adoption by a committee comprised of farmers selected by farm organizations in consultation with members of the State Legislature. We recommend that opposition to a regulation should require a hearing and that approval would be required by either the House or Senate of the Legislature.

We recommend that when a person files a complaint through any government agency, such as EPA, DER, SCS, ASCS, SPCA, ETC., the party making the complaint be identified to all persons involved, including the defendent.

We recommend that township ordinances concerning barbed wire fences not supercede state law in the erection of fences along public highways.

1978 Resolutions

We oppose any further gun control legislation on both the state and national level.

We recommend that more farmers be invited to participate in the development of state and local government regulations dealing with agriculture.

GOVERNMENT SERVICES

Present Policy

We recommend that the Department of Agriculture implement a program to allow farmers to have grain moisture testers checked at the seven regional offices at state expense. This shall not be a mandatory program, but should be a service to farmers desiring to insure the accuracy of their own equipment.

Farmers Union policies

(Continued from Page 92)

We recommend that the state pay for the vaccination of calves for Bang's Disease.

1978 Resolutions

We recommend that federal inspection services now handled under the U.S. Department of Agriculture or any other agency either directly or on contract to the state Department of Agriculture be continued in that department and not be transferred to the Food and Drug Administration.

HEALTH AND WELFARE

1978 Resolutions

Whereas health insurance costs can be deducted by farmers when paid as part of the cost of labor, be it resolved that the farmer should also be eligible to deduct the cost of his own personal health insurance on Schedule F. of his personal income tax.

We recommend that the Food Stamp program be continued to be administered by the U.S. Department of Agriculture and urge that a portion of the welfare payment be issued as food stamps.

IMPORTS

1978 Resolutions

We recommend that red meat imports be restricted or tariffs be imposed when domestic red meat prices are below 100 per cent of parity.

We recommend that dairy product imports be restricted or tariffs be imposed when domestic dairy product prices are below 100 per cent of parity.

INSURANCE

Present Policy

We request an investigation by the Insurance Commission on the rating disparities now existing between self-propelled equipment and other farm equipment fire insurance. If these rate differences cannot be justified by loss and revenue figures from the Insurance Commission, we recommend that Farmers Union take appropriate action to equalize the fees per unit of coverage.

We recommend the investigation of Workmens Compensation rules and regulations as they relate to agriculture. We further recommend lower premiums for minimum coverage or an increase in the minimum payroll before pro-rate premiums become effective, and we recommend quarterly or semi-annual payments for corresponding periods for the protection of farmers employing seasonal help.

PFU INTERNAL ACTIONS

1978 Resolutions

We recommend that National Farmers Union reinstate membership recruitment programs across state lines.

LAND USE POLICY

Present Policy

We recommend the enactment of a state law prohibiting the entry of non-farm corporations, limited partnerships with non-farm interests, or other non-farm structures into agriculture and forcing those already in agriculture to divest themselves of their agricultural interests.

We oppose state farms which have been closed by state welfare and correctional institutions being rented or sold for other than agricultural purposes and we recommend that they be taxable by local taxing bodies

We urge our local governments to plan for their own areas rather than allowing the counties to do it for them.

We recommend the development of land use policy which will recognize the need for maintaining land in agriculture to produce food and fiber needed now and by future generations. We recommend that farmers be assured representation and input on boards and commissions developing and implementing land use plans. We further recommend that the definition of farm land in land use plans should be "all land that is farmed or can be farmed and is capable of producing a crop of food and or fiber."

TAXES

Present Policy

Recognizing the regressive nature of property tax, we propose that the property tax to finance school districts be declared unconstitutional and we further recommend a change in the Pennsylvania State Constitution to allow a graduated income tax as a means of supporting schools at local levels. The revenue derived from this taxation shall eliminate the school tax from property taxation.

We recommend legislation to amend the Inheritance and Estate Tax Law of 1961 to allow for agricultural land to be appraised and taxed for inheritance purposes on its agriculture use value.

Due to the need for relieving the burden of transferring farm property from one generation to another, we recommend a change in the state inheritance tax to exempt to $200,000, which amount shall be increased annually to reflect changes in the cost of living index for farm property to surviving spouse, direct lineal descendents, or other immediate family providing the land will not be converted to non-agricultural use for a minimum of 10 years. If the recipient of the tax exemption would not continue with the provision for exemption, the original tax schedule would apply.

We recommend that depreciation should not be considered as income when applying for educational grants.

We oppose present Pennsylvania income tax provisions requiring payment of income tax on entire sales price of property on contract sales in the year of sale. We recommend a change in the law to allow payments to be taxed in the year payments or income is received on contract sales or any other deferred payment sales.

We recommend that the Legislature amend section 7602, Subsection A, Article VI, Capital Stock and Franchise Tax Act, to include an exemption "for agriculture purposes". This would entitle Capital Stock for farm corporations that are organized for manufacturing, processing, research, or development purposes.

1978 Resolutions

We recommend ammendments to state and national tax laws to prohibit non-farm businesses or corporations to use farm losses to off-set profit from non-farm businesses.

TRANSPORTATION

Present Policy

We recommend the improvement of rural bridges and roads in Pennsylvania.

1978 Resolutions

We support the new vehicle code amendments now pending in the state Senate as they were passed by the State House.

We recommend that 14 and 15-year-old residents or family operators be permitted to operate farm machinery within the radius permitted for farm equipment if they successfully pass farm operators safety course.

1978 NATIONAL POLICY RECOMMENDATIONS

Parity

We recommend that all farm products and items be priced at no less than 100 per cent of their cost of production and also include a 10 per cent reasonable profit.

National Farm Policy

We endorse the National Farmers Union Food Policy.

Farm Program Administration

We recommend that farmers performing ACP

NPPC demands investigation of sulfa residue problem

DES MOINES, Iowa – The National Pork Producers Council has called for the immediate formation of a Task Force of Federal regulatory officials, researchers, and industry representatives to investigate all facets of the present sulfa residue problem.

The NPPC, the country's largest commodity organization, urged this action at a January 16 public meeting with USDA and FDA officials in Washington, D.C.

"There has been too much finger shaking and accusing the other fellow of being at fault, and too little visible effort toward solving the problem," said J. Marvin Garner, executive vice president of the NPPC.

"Yet with each passing day, conscientious pork producers are suffering undue financial losses because of the continued use of questionable testing and sampling methods.

"And it's high time we develop and present for enactment a program to be mutually approved by FDA and USDA that will achieve the goals intended and correct those weaknesses now apparent," added Garner.

The NPPC call for action was based on a number of areas of concern. Among these are:

1. Scientifically trained people both in government and industry are expressing doubt with the exacting accuracy of the present testing capability for sulfa residue.

2. The sampling system appears to be concentrated in certain market systems and not on a statistical random basis.

3. Tolerance levels are too low to be practical in view of the admitted variability within a given laboratory and between laboratories.

4. The present administrative structure of FDA and USDA that serve this regulatory area are not conducive to efficient sample testing and issuance of prompt notice direct to involved producers.

5. There is no uniform, effective procedure that assures the involved pork producer of being the first to be informed of his accused violative predicament.

6. There is a glaring absence of basic knowledge of pork production by those making on-the-farm inspections.

7. There is lack of uniformity of how those found to be in violation are being treated or advised or permitted to market animals.

In addition to the NPPC statement, officials heard three producers relate their experiences when they were found in violation.

Sam Kennedy of Clear Lake, Iowa, said that he had never used sulfa since moving into his large confinement operation. Yet, he was found in violation and spent more than $12,000 on lab tests trying to determine where his problem was.

Richard Brand of Hopkins, Mo., explained that when he submitted his five head of hogs for re-test the liver samples were lost. And Myron Dammann of Elkton, Minn., questioned a number of procedures of the present monitoring program.

Family farms meet the challenge

CHICAGO - The family farm is alive and well despite increasing threats to its existence. Indeed, the challenge of survival of the family farm can be seen in the alarming drop in the farm population in recent years. From 1960 to 1970 the number of farmers in the U.S. dropped from over 15 million to just under 10 million, plunging the proportion of farmers to the total population from 8.7 per cent to 4.8 per cent.

"These are astounding figures," observed Secretary of Agriculture Bob Bergland in a recent issue of International Harvester's FARM FORUM magazine. "Never have so few fed so many."

Yet Bergland sees this as an essentially healthy sign. "There is no way that fewer and fewer farms could feed more and more people with bigger and bigger crops if they weren't doing it right," he said.

"The advantages and strengths of the family farm system are many: decisions that affect how the land is to be prepared, how it is to be cultivated and how it is to be harvested are made on the spot; animals are cared for around the clock; there is constant vigilance against anything going wrong; there can be instant changes of plans in the light of changes in the weather; and work gets done when needed," Bergland said.

In spite of its success, threats to the family farm system are numerous. In addition to the usual hazards of weather, disease, and low prices, Bergland cited other threats to the very system itself — vertical integration by big corporations, tax write-offs to wealthy city dwellers who purchase farms and deduct losses from their income.

A former member of the House of Representatives, Bergland in 1972 helped introduce legislation to prevent monopolistic practices in agriculture. "During hearings there were numerous opinions on how to accomplish that purpose," Bergland said, "but nearly everyone agreed that the efficiency of the family farm had prevented even worse encroachment by monopolistic, non-farm forces."

One reason Bergland cited for this was farmers' inherent sense of concern for his resources. "He does not 'mine' the land or waste the water, or hurt the soil, or let the place run down. The land is his only livelihood and his only asset."

Equine feeding is art versus ruminant nutrition

The Art Of Feeding Horses

DOVER, Del. – Since the nutrient requirements of the equine species are not completely known at present, feeding horses has come to be more of an art than a science, according to Extension equine specialist Mel Reitnour.

"For years the recommended equine rations were based primarily on feeding trials with the heavier, draft horses rather than light horses," says Reitnour. "And there were relatively few digestion trials done on horses compared to those reported on cattle and swine."

Though the basic nutritional needs of horses and cattle are similar in nature, the digestive tracts of the equine and the ruminant (cattle and sheep) species are quite differnt, meaning that each utilizes energy and nutrients from the diet in a different way.

What this difference boils down to, basically, is the amount of chewing each animal does. The ruminant doesn't have to chew its food as much as the horse because an extensive fermentation process occurs in its upper digestive tract before the food passes to the lower intestinal tract. The horse's system is not equipped with such a complete fermentation process and it therefore must chew more at the time of eating to aid the digestion process.

"Many workers believe that the horse is required to consume its food slowly for optimum results," says Reitnour. "It is conceivable if food is forced through the stomach and small intestine with large amounts of undigested materials, a normal digestion may not take place and the food will not be properly utilized."

There is also reason to believe that some feed ingredients may react differently in the horse than in the ruminant. For instance, carbohydrates are fermented by rumen bacteria into volatile fatty acids and then absorbed by the host. Presumably, a portion of the carbohydrates in a horse diet is absorbed directly from the small intestine and a portion acted on by microorganisms and then formed into volatile fatty acids – which may be utilized by the horse as a source of energy.

Protein digestion in different segments of the digestive tract is not completely known, although nutrition studies indicate that the small intestine is the main site of digestion and absorption of nitrogen in the horse.

Vitamin research in horses is very limited as well. Though many of the B vitamins are synthesized by microorganisms in the large intestine, it has not been completely determined to what extent they are utilized.

In spite of the fact that more is known about cattle nutrition than horse nutrition, practical feeding studies have revealed that horses will eat from two to three per cent of their live weight daily, most of it in grains and hays. Generally this percentage is divided about equally between the concentrates and roughage.

"However, each horse is an individual," says Reitnour, "and has individual metabolic requirements. So the feeder must decide whether this individual will be fed 50 per cent grain or 50 per cent hay, depending on the horse's condition and intended use."

For maximum utilization of protein energy, Reitnour recommends that horses be fed a high-quality grain mixture along with high quality hay (green, leafy and free from dust, mold or foreign materials), such as a legume or legume and grass mixture.

Garden Spot Young Farmers will discuss estate planning

NEW HOLLAND – The Garden Spot Young Farmers will sponsor a meeeting on Farm Estate Planning on Jan. 31st, at 7:30 p.m. at the agriculture classroom of the Garden Spot High School, here. The goals of the meeting are: to impress on farm families the importance of estate planning, to introduce farm families to methods available to protect the family from high estate taxes in the event of the death of the owner, and to provide information on how to effectively and fairly transfer ownership to the next generation.

Speakers will include Jay Irwin, Lancaster County Extension Agent: Jack Beattie, and estate planning consultant for the Trust Department of the New Holland Farmers National Bank; and Ken Howard, attorney with Hassel, Yost, and Sorrentino of New Holland and Lancaster.

Topics of discussion will include: title ownership, sales agreements, types of ownership, insurance, gift taxes, trusts and types of trusts, alternative methods of transferring ownership, and wills.

This is a subject that many farm families overlook and don't want to think about, but, if given proper consideration, estate planning can save dependants many headaches and dollars. The meeting is open to all area farmers and refreshments will be served.

For additional information, call Donald Robinson, adult farmer advisor. at 354-0480.

Dear Friends,

These cold winter months make it just impossible to do any outside work. That just has to wait til spring. We know that these cold days make you want to work indoors and we don't blame you. There are probably quite a few repair jobs that you should be doing indoors anyway.

That's where we can help.

We rent all kinds of equipment for all kinds of projects. You can rent just about anything from us. Air compressors and jack hammers for ripping out concrete floors, floor grinders for removing rough spots, and many other concrete tools. We rent scaffolding and ladders, saws and drills, and just about anything else.

So, when you want to start that indoor project and need some equipment, think of us.

We Rent Most Everything

Land is still a good investment

By JERRY WEBB
University of Delaware

NEWARK, Del. – The hottest topic in the farm press these days seems to be the price of land. You can hardly pick up a farm magazine without seeing at least one article discussing this subject. Everyone from the farmer who wants to buy land to the local banker who finances it to the Washington experts who know what its worth seems to have something to say. Interestingly, they all agree that land prices are too high.

Reports out of the Midwest indicate that the boom may be coming to an end. Farmers and other investors seem to be less willing to spend top dollar for farmland that offers no other income potential.

There appears to be a general awakening to the fact that a farmer can't pay for today's overpriced land out of current earnings. But whether that will stop him from buying or cause him to bid less remains to be seen. I'm not convinced that the apparent price weakening observed in the Corn Belt is any more than a temporary condition brought on by farmer's lack of cash and unsureness about future commodity prices.

Some 25 years ago our family sold a good level farm near the edge of a Missouri city for $400 an acre. It was purchased by a doctor who thought he was paying too much but apparently needed a place to invest some money. That same land, now covered by a shopping center, sells by the square foot.

Fifteen years ago we talked about eastern farmland selling for $500 an acre and we felt that was outrageous. We even heard of some city slickers paying as much as a thousand dollars an acre for land that really wasn't that good. Boy, were they laughed at. Now the Midwestern-based farm magazines talk about $3000 an acre land as commonplace. It's not that unusual for an Iowa farmer to pay that much for a piece of ground that he intends to farm the rest of his life and then pass on to his son, who also intends to farm.

To say farmland prices are too high is only a partial statement. The question remains, compared to what? Talk to the farmer about land prices and he says they're too high—compared to what he thinks land should be worth.

Twenty-five years ago, my wife's father had a chance to buy the farm he was renting, buildings and all, for $6000. He didn't think the farm was worth that much so he left the land, sold his equipment, took a job in town, and encouraged his teenage sons to find other pursuits. They went to the city, found city jobs and never made it back to the land. Twenty years later, he could have bought the same farm, although considerably more run down, for $20,000. He thought that was too high also.

Two years ago Joan and I took a walk down memory lane, so to speak, to that old farm. We had been told the buildings and a couple of acres could be purchased. The farmland was being saved for a housing development. A few phone calls told us what we already suspected. For $20,000 we could buy the house and one small building on about two acres of land. Both of us agreed that in our judgment it wasn't worth that much. But no doubt somebody did buy it as they bought the rest of the farm and if it sells again, the price will surely increase again.

Who's buying land for $3000 an acre? Farm Journal magazine recently did a survey among professional farm managers and agricultural bankers. They also asked the Department of Agriculture. You may be surprised at the results. Although a considerable number of farms are being purchased by doctors and lawyers, big corporations and real estate developers, most of the land, in fact, 85 per cent of all farm sales according to Agriculture Department figures, are for agricultural use only.

A successful farmer can afford to pay $3000 for his neighbor's farm. He can use the oversized equipment he already owns, make better use of his labor, spread his management costs over a larger base and increase his net worth as land values continue to increase.

Talk to farmers about farms for sale and they'll tell you about the ones that got away. The farms that sold a few years ago for a thousand dollars an acre. Farms they wish now they had purchased. Talk to them about farms that are for sale now and they'll tell you about ones that are too high. They just don't think they're worth that much. Yet somebody will buy at those outrageous prices and five years later those farmers will look back and wish it had been them.

Some experts think land prices are running a fever–that farmers are too optimistic and other land buyers are bidding up prices. And that the day may come when a dip in farm income will put a damper on rising land prices. That's about what's happening now in the Corn Belt.

So what does all this mean to farmers in this part of the country who want to buy more land? It simply means this may not be the best time to buy a farm. On the other hand, there may never be a better time. I don't believe I've met anyone who bought land, held it for at least a few years, and lost money. Nor have I ever met anyone who actually regretted having bought land even though it seemed too high at the time.

Good/bad points of Farm Show hashed out

By JOANNE SPAHR

HARRISBURG – As was to be expected, there were a lot of comments, both positive and negative, in regards to the renovations at Farm Show this year.

From the exhibitor's viewpoint, some good benefits arose from the changes, but for the most part, the alterations left a lot to be desired.

According to one cattleman spoken to, the reason for this stems from the age-old Farm Show predicament of "who comes first, the exhibitor or the spectator?"

In many cases, as far as the renovations were concerned, the spectator, and not the exhibitor, was catered to.

For instance, in the beef barn, the main concern among the stockmen was that blocking chutes were not allowed to be set up within the building. According to Farm Show officials, this was a safety precaution to prevent blockage of exit routes in the case of an emergency.

But, according to Ed Rishel, a long-time Angus showman from York County, even though the officials "do have a point," the fact still remains that a blocking chute is a safety feature. It protects the spectator from harm by an unruly animal when grooming is taking place.

"And, when I look around," commented Rishel, "I see an animal tied with a halter at every available nook and corner, and this is legal! I see this as a fire hazard just as much as a blocking chute would be," he stated firmly last week.

"Plus, the spectators run the risk of harm from an unruly, frightened animal," he added.

According to Rishel, when he asked to set up his chutes, his request was turned down and he was told to do the blocking at home.

To this he commented "Some of us just can't do it at home."

When they do not have blocking chute, there are other avenues for the showmen to take, such as grooming the animals outside the barn or in the stalls. But with inclement weather such as is typical for Farm Show, it is not convenient for the cattleman to work outside, and in the stalls, the clip job just doesn't get done as well as it would in a blocking chute.

As an answer to this problem, the stockmen suggest taking an area of the barn and setting up a wash rack and about eight to 10 blocking chute which could be used on a rotating basis by all the showmen in the barn.

They particularly favor eliminating the commercial exhibits set up in various corners of the barn, and setting up the work areas in their places.

Some of the good points of the steer barn include a better electrical system, more stall room, and wider passageways.

However, the new layout, broken up the house the cattle in parts of box stalls, does not suit some exhibitors.

"The layout is designed better for horses," stated one cattleman. "If there were a fire, I couldn't get my animals out of here as fast because they would bunch up in boxstalls. In the case of an emergency, you could herd the dairy cows much better with the set-up in that barn."

So, even though many improvements were made at Farm Show this year, there are still more to go in the eyes of some exhibitors.

Egg campaign is 'incredible'

HOUSTON, Tex. — the response to the first year of the "Incredible Edible Egg" campaign has been, in a word, "incredible."

That was the report of Lou Raffel, executive vice president of the American Egg Board, to the poultry conference at the 59th annual meeting of the American Farm Bureau Federation.

Raffel said independent surveys revealed that nearly one out of two persons recognizes the "Incredible, Edible" campaign, funded by egg producers nationwide to fight slumping consumption of eggs over the last few years.

He said the Egg Board spent $3.5 million last year on campaign advertising and will increase that to $4 million this year.

"As much as we are spending," the Egg Board spokesman added, "it isn't much when you consider $128 million a year is being spent to promote breakfast cereal."

He said the board also is looking to promote expansion of international markets, pointing out the large potential of foreign countries for U.S. egg sales.

Raffel also said the Egg Board will spend a half million dollars this year on research aimed at countering cholesterol claims by some nutritionists.

"There is no conclusive evidence, scientific or otherwise, that eating eggs has anything to do with cholesterol content in someone's blood stream," he pointed out.

Raffel received backing for his view from Dr. D. B. Mellor, an extension poultry specialist at Texas A & M University. Mellor drew a comparison with diabetes.

"Some people can't handle sugar," Mellor asserted. "But that doesn't mean that I have to give up sugar because someone else gets diabetes. The same goes for cholesterol. A few people can't handle cholesterol, but that doesn't mean everyone should eat their special diet. I'm not linking diabetes and cholesterol, just making the comparison of two metabolic diseases."

Mellor and Dr. Frederick Thornberry, also a Texas A & M poultry specialist, told the poultry conference about a great deal of work that has been done in Texas to help poultry producers in Texas and elsewhere. He pointed out that the university has gained a national reputation for large strides in controlling turkey cholera in the Lone Star state.

Chairman of the conference was Fred Heringer, president of the California Farm Bureau Federation and a member of the AFBF board of directors.

Earnings up at Dauphin

HARRISBURG – Dauphin Deposit Corporation, parent company of the Dauphin Deposit Bank and Trust Company, announced earnings of 6.1 million for 1977 over 3.5 million for 1976, an increase of 15.2 percent. Per share income was $5.15 compared to $4.47 a year earlier.

Factors contributing to increased earnings were the demand for consumer, commercial and mortgage loans. Also the control of non-interest related expenses and increased trust department income.

Deposits at year end were 468,507,635, compared to 1976 deposits of 434,974,221. Assets increased 8.7 percent to 527,269,200. and Trust Funds increased 11.1 percent to 528,836,547.

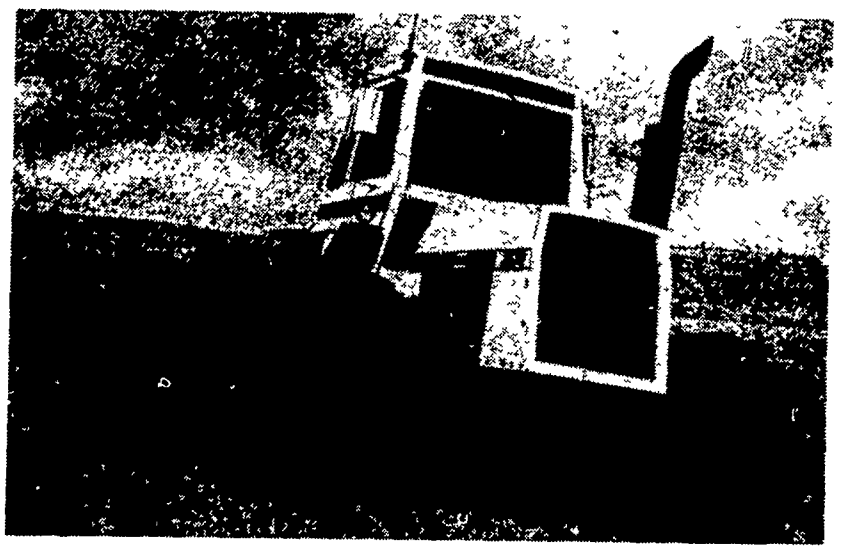
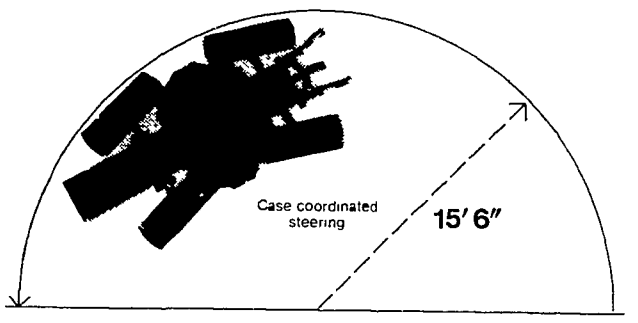
case THE OLDEST BUILDER OF 4-WHEEL DRIVE TRACTORS ON THE MARKET





Can the articulated 4WD turn this sharp?

Before you buy a 4-wheel drive tractor, try a Case with a free on-the-farm demonstration, which won a side-by-side field test with a competitive articulated model on a farm at Fredericksburg, PA. Here are some of the reasons they preferred a Case:

1. A PTO shaft that will utilize full engine horse power and not have a safety cut-out at 125 horsepower to protect PTO pump.
2. Better visibility over fenders & hood.
3. Note crab steering which is ideal for hillside and rowcrop work which has proven safer than articulation.
4. Less outside engine noise to disturb neighbors when working at late or early hours. Check our fuel economy on your farm which is better than reading reports.
5. Heavy Duty power shift transmission, not a full clutching truck transmission.
6. Back up by Case Assured Availability Program.

USDA proposes milk import changes

NEW YORK, N.Y. – The U.S. Department of Agriculture has proposed modifying federal import regulations on milk and milk products to reflect new scientific knowledge about foot-and-mouth disease, a highly communicable virus disease of livestock that is found in many foreign countries.

Officials of USDA's Animal and Plant Health Inspection Service said it is possible to import milk and milk products safely from FMD - affected countries if these products are heated during processing to 148°C (298°F) for at least 2.5 seconds. Also, casein and caseinates are found to be free of any FMD virus after storage for at least 84 days, and are therefore safe for distribution.

The proposed new regulations would permit milk and milk products to be imported from FMD-affected countries without additional restrictions if they have undergone the prescribed ultra-high-temperatures treatment. Unrestricted distribution of casein and caseinates would be permitted after 84-days storage in a bonded warehouse.

Knowledge that these procedures would eliminate the FMD virus was developed by scientists with USDA's Agricultural Research Service at the agency's Foreign Animal Disease Laboratory on Plum Island, N.Y.

APHIS officials say that ultra-high-temperature milk treatment and new casein storage provisions would offer an economical alternative to the stringent import regulations now in force for milk and milk products from countries where FMD is known to occur.

Currently, imports of fresh milk from such countries are prohibited, dried milk and related products must undergo additional processing after entering the United States, and distribution of restricted milk products is strictly regulated. Concentrated milk is permitted entry only if it is heat treated in hermetically sealed metal containers so that it can be stored without refrigeration. Only cheese, butter and butteroll are exempt from special USDA import regulations relating to potential FMD infection.

Public comments on the proposed regulations may be submitted through Feb. 13 to the Deputy Administrator for Veterinary Services, APHIS, U.S. Department of Agriculture, Hyattsville, Md. 20782. These proposals were scheduled for publication in the Jan. 13 Federal Register.

Packer under restraining order

NEW YORK, N.Y. – Borden Packing Co., Inc., Trenton, N.J., has been placed under an order which temporarily restrains it from purchasing livestock except on a cash basis

The firm, a meat packer, purchases livestock – mostly hogs – in both New Jersey and Pennsylvania as well as other eastern seaboard states.

The restraining order, along with the temporary injunction, is meant to protect the public from damage while the government pursues a cease and desist order through administrative channels.

USDA's administrative complaint charges that Borden Packing Company has current liabilities exceeding its current assets, and as of January 4 had an overdraft in excess of $380,000 in its corporate bank account.

USDA also charges that the firm, under Lawrence Marval's direction and control:

– Issued insufficient funds checks in payment for more than $227,000 worth of livestock from April through September 1977;

– Still owed $55,667 for livestock as of October 7, 1977; and

– Failed to keep accounts and records which fully and correctly disclose all transactions involved in its packer business.

If the charges are proven, Borden Packing Co Inc., would be placed under a cease and desist order. They could also be ordered to pay a fine.

U.S. District Judge George H. Barlow set February 6 as the date to hear a petition for an injunction which the U.S. Department of Agriculture (USDA) is seeking under the Packers and Stockyards (P&S) act.

The P&S Act is a fair trade practices law. It promotes and maintains fair and open competition in the marketing of livestock, poultry and meat.

Land use committee set

WASHINGTON, D.C. — Secretary of Agriculture Bob Bergland has established a Committee on Land use to coordinate land use-related activities of eight U.S. Department of Agriculture agencies.

"It is in the best interest of the nation that agencies of this department coordinate programs that assist in meeting the national needs for food, fiber and wood production, community and rural development and environmental protection," the Secretary said. "To do so, we need to provide financial assistance programs and research, technical and educational activities to help individual landowners and local public bodies make land-use decisions consistent with local and national objectives."

Secretary Bergland said USDA land-use decisions would be based on two basic premises–that the major responsibility for land-use policy, planning and regulations rests with local and state governments and that the rights and responsibilities of landowners and operators in making land-use decisions must be recognized in administering federal programs.

Each of the following agencies will have a member and alternate member for the committee: Agricultural Stabilization and Conservaton Service, Economics, Statistics and Cooperatives Service, Farmers Home Administration, Rural Development Service, Science and Education Administration, Rural Electrification Administration, Forest Service and Soil Conservation Service.

Secretary Bergland named M. Rupert Cutler, assistant secretary for conservation, research and education, committee chairman and Alex Mercure, assistant secretary for rural development, vice chairman. The chairman will designate an executive committee to provide day-to-day guidance for committee functions. Staff will be assigned by the agencies involved.

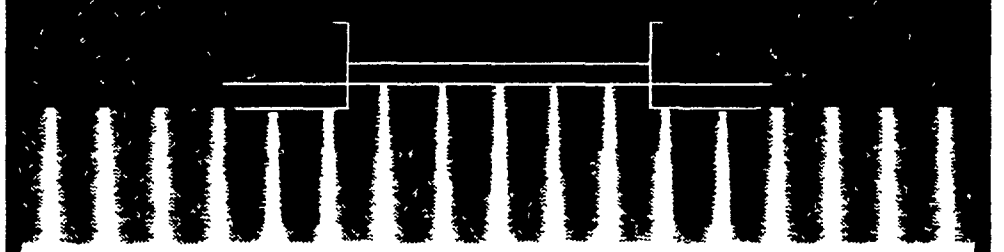
Increase Fertilizer Efficiency. Spread ...
BAKER'S
AG · LIMESTONE



Fertilizer is expensive — don't waste it!

Studies show that less than 50% of your fertilizer can do its job in very acid soil (5.0 pH). Fertilizer efficiency increases dramatically as pH rises — 67.31% at 5.5 pH, 80.33% at 6.0 pH, 100% at 7.0 pH.

Fertilizer efficiency goes up as soil acidity goes down. And reducing soil acidity is the job of Baker's Ag-Limestone.

Baker's agricultural limestone is available in two types, high-magnesium or high-calcium. Both sweeten acid soil, raise pH and unlock vital plant nutrients. For fast, efficient delivery, call your dealer or Baker.

The J. E. Baker Company
Paradise, Pa. (717) 442-8358 • Call Collect • York, Pa. (717) 792-3683

Farmers Union policies

(Continued from Page 93)

practices be eligible for payment within 30 days of the completion of the practice.

We recommend that interest rates charged to farmers for grains under loan and farm storage facility loans be reduced to rates charged by the Small Business Administration of those are lower than the rates charged by ASCS.

We recommend the continuation of ACP programs to be administered by a county committee system. We recommend an expanded ACP program with cost shares at a minimum of 75 per cent on all practices mandated by the Soil Erosion Sedimentation Act or the Environmental Protection Agency. We further recommend a small tariff on all exported grain, with the income derived being used to support the expanded ACP.

Cooperatives

We oppose any attempt to change by legislation or regulation the Capper-Volstead Act or any other existing cooperative legislation if such changes will weaken, destroy, or hinder the operation of cooperatives.

Energy

We oppose an energy policy that continues increased emphasis on research and construction of nuclear power plants as a primary source of energy. We recommend a national energy policy that will place more emphasis on energy conservation and on research and development of solar, coal, wind, geothermal, hydroelectric, methane gas, and other renewable sources of energy for our future energy needs. This policy should also include top priority for agriculture in any energy allocation program and emphasis on developing improved railroad and mass transportation systems.

We recommend continuing control of fossil fuel prices by the Energy Research and Development Agency.

FARM EQUIPMENT

We recommend the standardization of hydraulic and implement couplings.

Imports

We recommend that all plants outside the U.S. which ship meat products into the U.S. come under the meat import quotas.

We recommend that imported food commodities be subject to the same inspection as domestic products and be labeled as imports.

International Policy

We endorse the efforts of the International Federation of Agricultural Producers to stabilize prices of food commodities on the International market.

Land

We endorse the concept embodied in the Young Farmers Homestead Act of 1975. This program would establish a federal corporation which would be funded originally by the Congress. This corporation would be empowered to buy land from willing sellers and lease it to qualified young farmers with an option to buy. Fees collected from the young farmers would eventually make the program self-sufficient. We believe that this program would stabilize land tenure and make it possible for young farmers to begin farming operations.

Nfu Internal Actions

We recommend an increased effort by National Farmers Union to publicize Farmers Union accomplishments to it's members and other farmers, and to inform the general public of the costs and other problems involved in the production of food and fiber. We believe this promotion effort would achieve increased farmer acceptance and enrollment in Farmers Union in areas where Farmers Union is relatively new. This promotion effort should use the most effective news media available.

Occupational Health And Safety Administration

We endorse the concept of the federal Occupational Health and Safety Act and recognize the importance of providing safe and healthful working conditions; however, due process of law must be mandatory in determining guilt and assessing fines. We recommend that the Congress provide for total exemption of small farms and businesses who have 10 or fewer employees from the inspection provisions of the law.

Taxes

We resolve that the investment tax credit law be amended to allow any purchaser to earn the investment credit regardless of family relationships involved in sale.

We recommend that federal use taxes on farm trucks with a farm truck license be abolished.

Workmans Compensation Insurance

We recommend that National Farmers Union investigate the possibility of providing workmen's compensation insurance for Pennsylvania farmers.

Harvesting methods

(Continued from Page 90)

In 1938 it rained almost continuously in July as soon as the wheat was shocked, and the rain soaked through the caps and sprouted the whole crop, which was lost.

During one of the almost daily thunderstorms, I saw lightening strike one of the shocks. Although it was soaking wet, the intense heat dried it instantly, and the whole shock burst into flame.

Sometimes the sheaves were put in the barn for Winter threshing, but more often, they were threshed directly from the field and the straw blown into the mow.

In other sections of the state with smaller barns, the straw was blown into huge stacks in the barnyard.

At harvest time on Wye Island, which was mentioned earlier, a huge threshing machine and steam engine were taken to the island on a barge. All the farmers worked together at threshing time with 10 to 12 teams hauling sheaves to the threshing machine.

The straw on Wye Island was blown into huge stacks in the field. Some was used as livestock bedding, but most was left in the field to rot, since it had no sale value.

This is quite a contrast to the high prices of straw today.

After harvest, a sailing ship came across the bay from Baltimore to load the grain at the bridge.

Pennsylvanians look at British agriculture

By JOYCE BUPP
Staff Correspondent

During July 1976, 35 Pennsylvania farm and agribusiness people took part in a three-week visit to farms in Western Europe and Iron Curtain countries. The goodwill mission, sponsored by the People-To-People organization, gave the Pennsylvania Agricultural Leaders Delegation a chance for a close up look at cattle, machinery, crops and a variety of agriculture lifestyles. My husband, Leroy, and I are thrilled to have had the opportunity to join with that group for a learning experience we shall never forget.

England was our first scheduled stop. Touching down at London's Heathrow Airport, we were fascinated by the skyline of thousands of tiny chimneys sprouting from rooftops across the city as far as one could see, testimony to the time before central heat when each room had its own stove or fireplace. Plumbing pipes festooned the outsides of the buildings, luxuries added long after many of the historic rows of homes had been built.

Britain is the world's largest import market for agricultural products. The United States has for many years been its largest single supplier of foodstuffs. Then, with the United Kingdom's entrance into the Common Market a few years ago, exports from the European mainland countries have steadily increased.

Dairymen make up 22 per cent of the British farm population, but the country was still not completely self-sufficient in milk supplies. The 1976 average production per herd was about 9,000 pounds of milk, with herds averaging about 39 head. Yearly milk consumption per person was high, at 322 pounds, compared to 291 pounds in the U.S. Dairy product usage is encouraged, and milk deliveries are made to every home seven days of the week.

Every ounce of milk sold commercially in England must go through the government milk marketing board. Similar to our American Dairy Association, the marketing board is the largest single advertiser on British national television. The July, 1976, price of milk per quart in the small corner groceries was 36 cents.

Our on-farm visits took us to picturesque Buckinghamshire County, home of the 2800-acre holdings of the Rothschild financiers, one of the largest estates on the island nation. Ten men ran the operation, which included 400 milking cows in three herds, about 700 beef cattle, a race horse breeding and stud farm and 1200 acres of small grains.

This home of a British dairy herd manager on the Rothschild estate dates back to 1055 A.D. and was once given to a kinght by his king for services rendered. In the true English tradition, the house supposedly boasts its own ghosts.

The dairy set-up on the Rothschild's "Wadderstone" estate was modern by any standards, with a milking parlor for the Holsteins. Heifers were freeze branded as yearlings, pastured with a herd sire and bred to freshen at two years. Milk was marketed into the population centers in and around London.

English cows eat "cake," the European term for the complete dairy ration used in the parlor. Pelleted feed was dubbed "nuts," and frequently contained a large percentage of ground barley straw. Grazing was done on abundant pasture-lands, seeded mostly with perennial ryegrasses and fertilized yearly with up to 350 units of nitrogen.

Any English farm maintaining bulls in its cattle inventory is required by the Ministry of Agriculture to double-fence all pastures for safety. Cattle are vaccinated and there are laws for compulsory eradication of brucellosis.

Wheat and barley, known overseas as "corn," are farmed in the European countries with the study and intensity devoted to American corn in the United States. Small grain crops are seeded thickly, heavily fertilized with about 90 units of nitrogen per acre, and sprayed three times for aphids, weeds and fungus diseases. Flattened and lodged fields of grains are commonplace and a sign of a well-grown crop. An average size grain farm would cover about 350 acres. Corn as we know it, called "maize," by Europeans, is rarely seen.

Each county in England has established a small vocational-technical type college of agriculture. The Hampton Hall Agriculture

Top milk producers honored by Mount Joy Co-op

By KENDACE BORRY

MOUNT JOY -- Top producers of the 1977 year were recognized at the Mount Joy Farmers Co-operative annual luncheon meeting held January 25 at the Hostetter's Dining Hall, Mount Joy, Pa. Eleven dairy farmers were recognized for their herd milk production.

Recognized for their outstanding production records were: Harold Risser and sons, 1,536,000 lbs.; Paul and Elvin Kreider, 1,408,000 lbs.; Robert Greider, 1,309,000 lbs.; Joe Wivell, 1,288,000 lbs.; Louis Bixler and Sons, 922,000 lbs.; Roy Alger, 827,000 lbs.; Floyd Kreider, 788,000 lbs.; Laverne Rutt, 781,000 lbs.; Marvin Nissley, 776,000 lbs.: Henry Garber and Son, 771,000 lbs.; and Lloyd Miller, 690,000 lbs.

Other business conducted at the meeting included the election of three new directors of the co-op who will serve a term of three years. Elected were: Albert Fry, Manheim R7; Ivan Hansen, Palmyra R2; and Kenneth Miller, Manheim R2.

All three of the new directors are dairy farmers, Fry farming 120 acres, milking 32 cows; Hansen farming 200 acres and milking 40 cows; and Miller owning 110 acres, renting an additional 80 acres, and milking 70 cows.

The dinner meeting was chaired by president Roy Alger who conducted the business covered in the afternoon. Plant manager Paul Hostetter commented on the co-op's past year and remarked that he appreciated the cooperation of the members through the past snow storms.

Alan Bair, county agent from the Lancaster County Extension Service, spoke briefly to the group. Commenting on the excess milk supply problem, he asked the dairy farmers if they are part of the problem or the solution. He also mentioned the programs for dairy farmers, one on January 31, where Don Ace, Extension dairy scientist from Penn State will speak, and another workshop on DHIAs which will be held February 2.

Alfeus Ruth, representing the LeHi Cooperative, addressed the group concerning milk supplies in 1978. He related that he expected more milk supply problems in the future, with an overabundance of milk being the main concern. He urged for farmers to become involved in supply management.

It was announced that the Mount Joy Co-op had recently scored 91 on a U.S. public health inspection. Harvey Ruhl, Lloyd Moyer, Richard Metzler, Albert Frey, and Paul Witmer scored highest on the ratings.

As part of the program, Twila Brubaker, Lancaster County Dairy Princess, spoke to the co-op members about the Lancaster County dairy farmer, and the unique qualities it takes to be a farmer today.

Further entertainment was provided by Mrs. Peggy Klein and her ventriloquist dummy, Freddy.

Max Summer, milk inspector for the group, spoke about several concerns that he had for the group. He recommended that farmers protect their compressors on their milk tanks, and also expressed concern that antibiotic labels be checked before use.

Approximately 150 people attended the meeting despite the bad weather and poor travel conditions.

Farmers needed for tail-gate markets

PHILADELPHIA -- Nutritional Development Services of the Archdiocese of Philadelphia, in association with Pa. Department of Agriculture, invites farmers to participate in a series of tail-gate markets which will be held in Philadelphia from late June to mid-October. The purpose of these markets is to provide urban consumers with fresh Pennsylvania produce at reasonable prices, while offering farmers the opportunity to sell their produce for a fair return. These tail-gate markets were organized as a test project last Summer, and received enthusiastic response from farmers, consumers, and the media.

The only cost to the farmer is $30 for temporary licenses which will be arranged through Nutritional Development Services. These licenses entitle participating farmers to sell their produce at any designated site as often as they wish throughout the Summer.

Any farmer who is interested in signing up for these markets, or receiving more information on them, should write to: Cathi Hanssens, program director, Direct Marketing Project, Nutritional Development Services, 222 N. 17th St., Philadelphia, Pa. 19103, or call Miss Hanssens at (215) 587-3767.

xxx

DEPENDENCY LIMITS

When can you no longer claim a dependency exemption for your child? Once a child reaches 19, you can claim an exemption only if you provide more than half of his support and his gross annual income is less than $750. However if the child is under 19 or is a full-time student, the $750 limitation does not apply.

MARTIN'S LIMESTONE INC.

Pa. Holstein Association names 14 distinguished youth members

STATE COLLEGE — Fourteen youth members of the Pennsylvania Holstein Association have been selected for honors through the organization's annual distinguished junior member contest.

Named junior winner in the girls' division was Christine Gitt, daughter of Mr. and Mrs. Robert Gitt, Littlestown R2. Boys' division junior winner is John Peters, son of Mr. and Mrs. Emil Peters, Port Matilda R1.

First runners up in the junior competition were Helen Seidel, 258 Highland Avenue Kutztown, daughter of Mr. and Mrs. Ray Seidel, and Peter King, son of Mr. and Mrs. Paul King, Delta R2, Betsy Hartle, Bellefonte R2, and Todd Miller, Hamburg R2, were selected the second runners-up.

Finalists in the senior girls' division are: Melanie Alsdorf, Spartansburg R2; Patty LeVan, Milton R2; Cynthia Shirey, Beavertown R1; and Sharon Troutman, Richland R1. Senior boys finalists are: Tom Hartle, Bellefonte R4; Paul Knight, Airville R2; Jeff Miller, Linglestown R4 and Steve Marshall, Roaring Branch, R1.

The eight senior finalists will undergo judging interviews on February 11, when a first-place boy and girl will be chosen. The two top winners will advance to competition for national junior distinguished member. All finalists in the senior division will be guests of the association for a tour of the breed journal publishing offices at Sandy Creek, N.Y., and will visit several registered Holstein herds.

Both junior and senior winners will be recognized at an awards breakfast, scheduled during the association's annual meeting and statewide convention, February 23 through 25 in State College.

Selections for the distinguished junior member contest are based on participation in registered Holstein activities, a scrapbook kept by each entrant and personal interviews.

Sire Power hires Sowerby

TUNKHANNOCK – Mary E. Sowerby is the new Sire Power communications manager according to Ronald Flatness, director of sales and promotion. Sowerby will be responsible for newsletters to cooperative members and technicians, promotional materials, Sire Power exhibits at shows and meetings and tours of the Tunkhannock, Pennsylvania bull stud.

Sowerby was raised on a Guernsey farm near Princeton, N.J. and is the daughter of Mr. and Mrs. M. B. Sowerby. Her father is the nationally recognized Guernsey classifier, and formerly was the manager of Woodacres Guernsey Farm. Sowerby received her B.S. from Virginia Polytechnic Institute and State University in 1975, with majors in dairy science and biology.

While an undergraduate, Sowerby was active in the VPI Dairy Science Club, American Dairy Science Association Student Affiliate Division, and VPI Student Goverment Association. She was also a member of the VPI dairy judging team and newspaper staff. She is affiliated with VPI chapters of Alpha Zeta (agriculture), Pi Delta Epsilon (journalism), and Phi Sigma (biology).

In 1977 Sowerby received her M.S degree at Virginia Tech in dairy science with emphasis in cattle behavior and management. She worked as a graduate research assistant evaluating effects of shifting

Mary Sowerby

cows between intra-herd groups on their milk production.

Achievement night held

YORK – The Horse-N-Around 4-H Club recently held its Achievement Night banquet at the Canadochly United Church of Christ social hall. Approximately 115 people attended the event.

Awards were presented to the following members: Junior grooming and showmanship, Robin Helder; Senior grooming and showmanship, Cindy Criswell; most likely to succeed, Nancy Bahn and Kristi Sowers; girl rookie, Melissa Trostle; boy rookie, James Eveler; parent of the year, Vicki Coats; 4-H graduate of 1977, Marty Robin.

District participants who were recognized included: Diana Aldinger, Nancy Bahn, David Ducharme, Carol Helder, Lisa Helder, Lori Helder, Robin Helder, and Sandy Thomas.

Door prizes were awarded after the program.

Lunch by West Fallowfield School

Pennsylvanians

(Continued from Page 101)

School, which we toured, enrolled 110 full-time students, who can begin studying there at age 16 on assignment from other schools. Lectures fill their morning schedules, with practical farm work on the school's 250 acres with crops and livestock during the afternoon. Later in their curriculum, each student is assigned to on-farm internships, after which they return to the college for a month of final exams.

Sixty of the students were girls, most of them training for careers as farm secretaries or bookkeepers. Because of the school's proximity to London, a majority of the students did not come from farm backgrounds.

Buckinghamshire County included approximately 2000 working farms, with 3000 farm workers. Farm employee numbers were decreasing rapidly with the increasing pressure on the English economy. English workers paid about one-third of their total annual wages as their share of the national taxes.

An average farmer needed an income of 12,000 L. (British pounds), or the American equivalent of roughly $24,000. A herd of at least 40 milk cows or 60 beef animals were necessary to reach that standard of farm income.

Membership of the United Kingdom in the European Common Market was, according to some officials, "reaping a bonanza" for efficient agriculture producers. Prices to consumers were being set to cover the cost of production to an "average" producer, leaving the food-buyer to foot the bill for 100 per cent parity.

The beautiful English countryside is gently rolling and intensely farmed in small grain and grazing pastures.

4-H club banquet held

MANHEIM – The Saddle Cinches 4-H Horse and Pony Club held their annual roundup banquet on January 21 at the Manheim Community Center. Families of the 4-H'ers were guests at the covered dish social.

Entertainment for the program was presented by Terri Mumma and Julie Shreiner, members of the club.

Leader Connie Nolt presented trophies as awards to the highest placing members for work they completed in the past year. Winners included: high sponsorship, Julie Shreiner; most improved first year member, Barb Karsnitz; most improved second year member, Ginny Ruhl; outstanding parents, Rose King and Robert Tshudy; and state winner and most active member, Robin Tshudy.

Good humor aswards were presented to Robin Tshudy, Terri Mumma, Julie Shreiner, and leaders Kendy Borry and Connie Nolt.

Door prizes were presented by the following businesses: Gochenaurer Kennels, Sweigart Tire Service, Bomberger's Store, and White Oak Mill.

A dance was held following the dinner.

The Saddle Cinches 4-H club is composed of members from the Manheim area. The next meeting will be held January 30, 7 p.m., at the home of Julie Shreiner, Penryn.

'Operation I.D.' reduces theft

HOUSTON, Tex. -- Farmers and ranchers who brand cattle have no trouble identifying their animals, but how do you identify a stolen piece of machinery that looks like every other one?

This is the question posed by Craig Beek, director of the Iowa Bureau of Criminal Investigation, at the local affairs conference held during the American Farm Bureau Federation annual meeting here recently.

Beek was the lawman who helped the Iowa Farm Bureau effort to start an identification program in that state – the first in the nation.

"Operation I.D." requires total community involvement and includes marking farm machinery with a stamping device, branding grain by the use of marked paper confetti, ear tatoos for hogs and cattle and marking household items and CB radios.

Operation I.D. is a part of the local affairs program of the AFBF.

Dean Kleckner, president of the Iowa Farm Bureau, told an overflow audience that the local affairs program was the most important part of the Farm Bureau program because it is close to home and members are able to see the results of their work more readily.

"After all, the county Farm Bureau is where it's at!" he said.

F. Everette Smith, president of the Rockingham County Farm Bureau in Virginia, told of the successes of the local affairs programs in his home county and stressed working closely with elected county officials to get programs started or old ones changed.

"You must know what you want to accomplish, get all the facts straight and get a lot of people involved," he said.

ATTENTION: DAIRYMEN

February and March are herd months. We move 40% of our herds in these 60 days. Last year over 35 herds bought and sold privately and at sales in our own sales barn.

If you have a herd or know of a herd for sale, contact us first.

If you need a herd, let us know. We work for your satisfaction. We guarantee a clean TB and blood test and a herd that is ready to go to work.

No herd too small or any too large.

PURINA BIO-4 POULTRY PROGRAM

HELPS YOU FIGHT TODAY'S HIGH COST OF FEED

WHAT IS BIO-4™

It took Purina Poultry Researchers 7 years to develop BIO-4™. During these 7 years they studied laying hens nutrient requirements and what nutrients are necessary to produce an egg based on the hens feed consumption. By knowing the hens nutritional needs, and by precision feed formulation, BIO-4™ insures that hens receive necessary nutrients without over-feeding costly feed ingredients.

SAVES FEED $$$

FEED INTAKE lbs./100 HENS/DAY	TM BIO-4 CHOW TO FEED
UNDER 20.0	BIO - 128
20.0 TO 21.6	BIO - 121
21.7 TO 23.3	BIO - 114
23.4 TO 25.0	BIO - 107
OVER 25.0	BIO - 100

Starting With B-100, Each BIO CHOW Contains 7% More Fortification

MORE PROFIT $$$

Better Rations + Better Feeding Program = Better Performance

Feed comparison tests have shown that BIO-4™ can lower feed costs ½ cent per dozen eggs and maintain top production, egg size, and shell quality. That's $110.00 saved per 1000 hens/per year.

BETTER YOURSELF WITH BIO-4™ PERFORMANCE EDGE
